Saunders Company Entering the Child's Mind teaches a powerful technique for gaining insight into a child's way of thinking. In the tradition of Piaget and Vygotsky, Dr. Herbert P. Ginsburg argues that standardized instruments of evaluation often fail to meet the challenges of complex cognition. Understanding that interviews, like any evaluative instrument, can be improperly conducted and assessed, Dr. Ginsburg then seeks to advance the critical analysis of the interview methods and to investigate its effectiveness and reliability. He presents guidelines intended to help novices learn to conduct clinical interviews and to assist more experienced

interviewers in perfecting their techniques. Dr. Ginsburg provides to both psychologists and others interested in understanding the minds of children the first comprehensive treatment of the theory and practice of the clinical interview method. -- from back cover.

Research Methods for Clinical and Health Psychology Lee & Low Books

The first textbook on the subject, this is a practical, clinically comprehensive guide to ethical issues in surgical practice, research, and education written by some of the most prominent figures in the fields of surgery and bioethics.

Discussions of informed consent, confidentiality, and advance directives--core concepts integral to every surgeon-patient relationship--open the volume. Seven chapters tackle the ethical issues in surgical practice,

covering the full range of surgical patients--from emergency, acute, high-risk, and elective patients, to poor surgical risk and dying patients. The book even considers the special relationship between the surgeon and patients who are family members or friends. Chapters on surgical research and education address innovation, self-regulation in practice and research, and the prevention of unwarranted bias. Two chapters focus on the multidisciplinary nature of surgery, including the relationships between surgery and other medical specialties and the obligations of the surgeon to other members of the surgical team. The economic dimensions

of surgery, especially within managed care, are addressed in chapters on the surgeons financial relationships with patients, conflicts of interest, and relationships with payers and institutions. The authors do not engage in abstract discussions of ethical theory; instead, their discussions are always directly relevant to the everyday concerns of practicing surgeons. This well-integrated volume is intended for practicing surgeons, medical educators, surgical residents, bioethicists, and medical students.

It is widely accepted that the machinery of multicultural societies and liberal democratic

systems is dependent upon various forms of dialogue - dialogue between political parties, between different social groups, between the ruling and the ruled. But what are the conditions of a democratic dialogue and how does the philosophical dialogic approach apply to practice? Recently, facing challenges from mass protest movements across the globe, liberal democracy has found itself in urgent need of a solution to the problem of translating mass activity into dialogue, as well as that of designing borders of dialogue. Exploring the multifaceted nature of the concepts of dialogue and democracy, and critically examining

materializations of dialogue in social life, this book offers a variety of perspectives on the theoretical and empirical interface between democracy and dialogue. Bringing together the latest work from scholars across Europe, *Democracy in Dialogue*, *Dialogue in Democracy* offers fresh theorizations of the role of dialogue in democratic thought and practice and will appeal to scholars of sociology, political science and social and political theory.

Surgical Education CRC Press

Primary care medicine is the new frontier in medicine. Every nation in the world has recognized the necessity to deliver personal and primary care to its people. This includes first-contact care, care based in a positive and caring personal relationship, care by a single healthcare provider for the majority of the patient's problems, coordination of all care by the patient's personal provider, advocacy for the patient by the provider, the provision of

preventive care and psychosocial care, as well as care for episodes of acute and chronic illness. These facets of care work most effectively when they are embedded in a coherent integrated approach. The support for primary care derives from several significant trends. First, technologically based care costs have rocketed beyond reason or availability, occurring in the face of exploding populations and diminishing real resources in many parts of the world, even in the wealthier nations.

Simultaneously, the primary care disciplines-general internal medicine and pediatrics and family medicine-have matured significantly.

An A-Z Guide CRC

Press

Nearly two decades of research in clinic, industry, and educational settings have enabled the authors to present this compact but comprehensive report on the structure of the interview process.

Joseph D. Matarazzo and Arthur N. Wiens have put together a concise presentation of research evidence; free from the dogged adherence to personal opinion that plagues most literature on the subject. The authors present and discuss basic interview concepts: interviewer and interviewee difference in interview behavior, the stability of such behavior, and conditions, which may modify it (including the first solid evidence, independently cross

validated by others, for the effect on the interviewee of specific and common interviewer tactics). The book contains a wealth of data on differences in the interview speech behavior of different types of patients, and between persons in different occupations, different administrative hierarchies, and different professional specialties (for example surgical versus psychiatric nurses). Data from the clinical setting also includes evidence for a new and heretofore

unsuspected process variable; i.e., a synchrony in the interruption behavior of the therapist and his patient over many psychotherapy sessions. The undergraduate in the communications fields will find this book an excellent adjunct to any of a number of courses in his special curriculum. Graduate students will find a storehouse of leads for theses and dissertations; while the practitioner and teacher in these fields will find much that is new and important to him in each chapter.
