Congratulations!

You've just discovered the greatest fat loss protocol ever created

in the health and fitness industry. After decades of real-world experimentation in the gym, and deep research into the science of how the human body can achieve ultimate health, fitness experts Jay Campbell and Jim Brown have successfully helped thousands of men and women achieve toned, muscular, and world-class physiques. And now, you have in your hands the step-by-step system they use for going from 'lifetime dieter' to 'lifetime fat-burning machine.' It's called The Metabolic Blowtorch Diet. fat, from average Joe to elite fitness competitors at the highest level. The Metabolic Blow Torch Diet goes far beyond fast and efficient fat loss to deliver a superior lifestyle template which will teach you how to: Guarantee maximum muscle preservation and improved definition Skyrocket your energy levels to heights you didn't realize were possible Eliminate your hunger cravings and food addictions once and for all Customize a diet and training regimen for YOUR specific needs and goals, regardless of your fitness experience Supercharge your mental focus for peak productivity Improve your long-term health to live a life of power

It's a fact: the low-carb craze is everywhere.

Another fact: two-thirds of Americans are still overweight and no one is getting thinner.

Although low-carb diets produce short term weight loss, the results are not sustainable in the long term. Dieticians, fitness experts, and medical publications are slowly awakening to the fact that the low-carb diet isn't the answer to weight loss

nor a solution to the obesity epidemic. What is the solution? Jorge Cruise's THE 3-HOUR DIET reveals that timing is the revolutionary weight loss element that has been kept secret until now. By eating small, balanced meals every three hours you reset your body's metabolism and achieve amazing results. Eating every three hours turns off your "starvation protection mechanism" ensuring that fat is released and fat-burning muscle preserved. So get ready to lose 2 pounds each week! All with no calorie counting, no starvation, and no deprivation. Bottom line, timing will sculpt your body slim. With his now trademark easy-to-follow

instructions, accessibility, and client success stories, Jorge Cruise's THE 3-HOUR DIET is a fluid combination of proven success and categorical innovation. Weight loss has never been easier!

The Anabolic Solution

is all about

manipulating lean body mass and bodyfat. And it does this by affecting metabolic changes and altering the body's anabolic and the catabolic hormones and growth factors.

Anabolic solutions explains both the art and a viable alternative to drug use.

Physics for Future

Presidents JHU Press

If there were a pill that was scientifically proven to help you look 10 years younger, lose

fat, improve hormonal health, fight pain and inflammation, increase strength/endurance, heal faster, improve your brain health and increase your energy levels, it would be a billion-dollar blockbuster drug.

Hundreds of millions of people would be told to start taking it by their doctors every day. And doctors all over the world would call it a "miracle drug." Here's the crazy part: That "drug" exists. But it's not a pill. It's red light therapy! Did you know that light has the power to heal your body and optimize your health? Of course, everyone knows about the importance of vitamin D from sunlight (from UV light). But few are aware that there is another type of light that may be just as

vital to our health - red and near-infrared light. Think it's all just hype? Think again! Believe it or not, there are now over 3,000 peer-reviewed scientific studies showing incredible health and anti-aging benefits of red and near-infrared light therapy. But it gets even better... While you used to have to spend \$100 or more to get treatments done in a medical or anti-aging clinic (where this technology has been used for decades), new breakthroughs have allowed us to harness these benefits in the comfort of our own home, without the need to spend thousands on an expensive laser device or \$100 per treatment at a health/anti-aging clinic. We can now do red light therapy at

home, as much as we want, at a tiny fraction of the cost. In this book, Ari Whitten - bestselling author, health expert and founder of The Energy Blueprint - cuts through all the confusion, myths and pseudoscience around this complex topic, and takes you on a deep dive into the science of how to use red/near-infrared light therapy to improve your health, your body and your life in dozens of ways. Inside this book, you'll learn how to use red/near-infrared light therapy to: - Fight skin aging, wrinkles, and cellulite and look 10 years younger - Lose fat (nearly twice as with diet and exercise alone) - Rid your body of chronic inflammation - Fight the oxidative damage

that drives aging - Increase strength, endurance, and muscle mass - Decrease pain - Combat hair loss - Build resilience to stress at the cellular level - Speed up wound/injury healing - Combat some autoimmune conditions and improve hormonal health - Optimize your brain function and mood - Overcome fatigue and improve energy levels You'll also get critical information to get the best results, including:

- Specific dosing guidelines for every type of treatment (and how to avoid common mistakes) - The 5 "bioactive" types of light that affect human cell function and human health - Which health issues respond best to red/near-infrared light therapy -

The big mistakes people make when giving themselves red light treatments (and exactly how to do treatments to get the best results) - The best light devices to get (and why most devices on the market are a waste of money) - Exact protocols for how to use red/near-infrared light therapy for everything from fat loss, to brain optimization, to skin anti-aging Optimal light exposure habits are as essential to good health as good nutrition habits. But the big problem is that, just as many people eat diets of processed junk food and fast food, most people are eating "light diets" of "junk light" and end up with chronic "mal-illumination." This book will show you how to

fix that. Red and near-infrared light therapy is one of the biggest health breakthroughs in the last half century. If you're serious about your health and improving your body, it's time to start using this powerful tool in your life. If you want to build muscle and lose fat easily, effectively, and rapidly...and if you'd like to rid yourself of all kinds of bad advice and habits that are making getting into great shape much harder than it should be...then you need to

read this book. Let me ask you a question. Do any of the following claims sound familiar? "I have bad genetics--I just can't build muscle or lose fat easily." "You have to work your abs more to get a six-pack.? "When doing cardio, you want your heart rate in the 'fat burning zone.'" "Don't eat carbohydrates--they make you fat." "Don't eat at night if you want to lose weight." "If you wait too long in between meals, your body goes into 'starvation mode' and you will mess up your metabolism." "I'm overweight because I have a slow metabolism." You've probably heard one or more of these statements before, and the sad truth is lies like these have ruined many people's fitness

ambitions. Thanks to the overwhelming amount of fitness pseudo-science and lies being pushed on us every day by bogus magazines and self-styled "gurus," it's becoming harder and harder to get in shape. Muscle Myths was written to debunk the most commonplace and harmful gimmicks, fads, myths, and misinformation in the health and fitness industry. And unlike other books that just offer endless opinions, the advice in this book is backed up by over 300 citations of scientific literature, and real-world results. Make no mistake: this isn't a book about exercise and diet theory. This book is full of practical, results-driven advice that will help you reach your

fitness goals easier and faster. Here are just some of the things you'll learn in this book: Why you don't have to completely cut out carbs or fat, or eat weird combinations of food to lose weight. The truth about supplements and why 99% of them are a complete waste of money (and the few that are actually scientifically proven to work). The truth about the effects of fasting and the "starvation mode" myth. Yup, it's a myth, and you may even want to incorporate some fasting into your meal schedule. Why eating a substantial amount of carbohydrates every day won't make you fat as some "experts" claim, but why going low-carb can be beneficial for some. The

scientific secrets of getting a six-pack. Forget 6-minute gimmicks, doing endless crunches, and hours of grueling cardio--it's actually pretty easy when you know what you're doing. Training and diet methods that will completely shatter any perceived "genetic barriers" that you think are holding you back from building muscle or losing weight. What you need to know about alcohol and its effects on your fat loss and muscle growth. (Hint: It's not nearly as bad as some people claim, and you don't have to totally abstain if you know what you're doing!) And much more. This book will save you the money, time, and frustration of falling into the traps of

misleading diets, workout programs, and products, and teach you how to finally start seeing real results with your diet and exercise. SPECIAL BONUS FOR READERS! With this book you'll also get a free 52-page bonus report from the author called "Muscle Meals: 15 Recipes for Building Muscle, Getting Lean, and Staying Healthy." In this free bonus report, you'll find 15 fast, healthy, and tasty meals that will help you build muscle or lose weight, regardless of your current skills. If you like

Starting Strength or 5/3/1, you're going to LOVE 10/20/Life! What is 10/20/Life? 10-and-20 weeks at a time, for a lifetime of positive momentum in training and in LIFE. This philosophy is a life-long approach for any level of lifter or athlete. Many recreational lifters utilize the protocols in this book to have a better plan in the gym, with no plans to ever compete. On the other hand, many competitive lifters from Beginner to Pro use this approach with great success! From The Author, Brian Carroll: "With 10/20/Life, my objective is to teach you to get the results you want by coaching yourself-the same way a superior coach would take you through an

individualized program in a great gym. We start out with a thorough examination of your weak points because that's how quality coaching works. The idea is to show you what to program, and when, based on your weaknesses in the squat, bench press, and deadlift. This sounds simple, but it's something most people don't even consider, much less put into practice. From there, the 10/20/Life system takes you through the best injury-preventative warm-up in the industry, followed by a comprehensive layout of coaching cues for each individual lift. From start to finish, you'll learn what to look for and what to do, and you'll learn the reasoning behind all of

it. By the time you're finished working your way through these materials, you'll be able to coach yourself, and others, like a pro." Learn to be your own coach, attack your weaknesses and utilize a proven philosophy that is a guide to permanent success. This book includes a comprehensive WEAK POINT CHART and WARM-UP INDEX that teach you how to assess your own training and PRESCRIBE THE EXERCISES YOU NEED. 20 YEARS OF RESEARCH AND TRIALS distilled into a program you can actually use! The plan is an easy five-step process: 1. Choose your schedule. (3 different) 2. Determine your weak points in the main lifts. (use the coaching

guide to correct form)
3. Use the Weak Point and Assistance Exercise indexes to custom design your own program. (pick your assistance work as specified in the Weak Point index) 4. Follow the warm-up protocol listed. (4 parts, super easy and custom) 5. Determine your level of readiness, then train according to the system's RPE plan for that day or if you're in precontest, you go off of percentages. (this all depends on where you are in your phase of training) Just a few of the sizable additions to this "second edition" physical copy: * New chapter "Deload" * New chapter "Establishing a baseline" * New chapter "Speed work" Other updated features

The Cheat to Lose Diet

Demos Medical
Publishing

See if this sounds familiar: you've just started a new diet, certain that it's going to be different this time around and that it's going to work. You're cranking along, adjust

to the new eating (and exercise) patterns and everything is going just fine. For a while. Then the problem hits.

Maybe it's something small, a slight deviation or dalliance. There's a bag of cookies and you have one or you're at the mini mart and just can't resist a little something that's not on your diet. Or maybe it's something a little bit bigger, a party or special event comes up and you know you won't be able to stick with your diet. Or, at the very extreme, maybe a vacation comes up, a few days out of town or even something longer, a week or two. What do you do? Now, if you're in the majority, here's what happens: You eat the cookie and figure that you've blown your

diet and might as well eat the entire bag. Clearly you were weak willed and pathetic for having that cookie, the guilt sets in and you might as well just start eating and eating and eating. Or since the special event is going to blow your diet, you might as well eat as much as you can and give up, right? The diet is obviously blown by that single event so might as well chuck it all in the garbage. Vacations can be the ultimate horror, it's not as if you're going to go somewhere special for 3 days (or longer) and stay on your diet, right? Might as well throw it all out now and just eat like you want, gain back all the weight and then some. What if I told you that none of the above had to happen? What if

I told you that expecting to be perfect on your diet was absolutely setting you up for failure, that being more flexible about your eating habits would make them work better? What if I told you that studies have shown that people who are flexible dieters (as opposed to rigid dieters) tend to weigh less, show better adherence to their diet in the long run and have less binge eating episodes? What if I told you that deliberately fitting in 'free' (or cheat or reward) meals into your diet every week would make it work better in the long run, that deliberately overeating for 5-24 hours can sometimes be a necessary part of a diet (especially for active individuals), that

taking 1-2 weeks off of your diet to eat normally may actually make it easier to stick with in the long run in addition to making it work better. I can actually predict that your response is one of the following. Some may think I'm making the same set of empty promises that every other book out there makes. But I have the data and real-world experience to back up my claims. Or, maybe the idea of making your diet less strict and miserable is something you actively resist. I've run into this with many dieters; they seem to equate suffering and misery with success and would rather doom themselves to failure

by following the same pattern that they've always followed rather than consider an alternate approach. Finally, maybe what little I wrote above makes intuitive sense to you and you want to find out more. Regardless of your reaction to what I've written, I already have your money so you might as well read on. I should probably warn you that this isn't a typical diet book. You won't find a lot of rah-rah or motivational types of writing, there are no food lists and no recipes. There are thousands of other books out there which fit that bill if that's what you want but this isn't it.
