CODY DAVILA

Essentials of Economics Ludwig von Mises Institute

The COVID-19 pandemic has re-ignited discussions of how architects, landscapes, and urban planners can shape the environment in response to disease. This challenge is both a timely topic and one with an illuminating history. In *The Topography of Wellness*, Sara Jensen Carr offers a chronological narrative of how six epidemics transformed the American urban landscape, reflecting changing views of the power of design, pathology of disease, and the epidemiology of the environment. From the infectious diseases of cholera and tuberculosis, to so-called "social diseases" of idleness and crime, to the more complicated origins of today's chronic diseases, each illness and its associated combat strategies has left its mark on our surroundings. While each solution succeeded in eliminating the disease on some level, sweeping environmental changes often came with significant social and physical consequences. Even more unexpectedly, some adaptations inadvertently incubated future epidemics. From the Industrial Revolution to present day, this book illuminates the constant evolution of our relationship to wellness and the environment by documenting the shifting grounds of illness and the urban landscape.

Roads to Health Springer

Water Communication aims at setting a first general outlook at what communication on water means, who communicates and on what topics.

Through different examples and based on different research and contributions, this book presents an original first overview of "water communication". It sets its academic value as one distinct scientific domain and provides tips and practical tools to professionals. The book contributes to avoid mixing messages, targets and discourses when setting communication related to water issues. The book facilitates coordination within the water sector and its organizations as water is a wide field of applications where inadequate words and language understanding between its stakeholders is one of the main obstacles today. *Water Communication* provides and describes: a general outlook and retrospective of the history of the water sector in terms of communication the landscape of organizations communicating on water and classification of topics the differences between communication, information, mediation, raising awareness examples of communication campaigns on water *Water Communication* is a vital resource for communication managers, utility managers, policy makers involved in water management and students in water sciences and environment. Colour figures from the book are available to view on the WaterWiki at:

In *Roads to Health*, G. Geltner demonstrates that urban dwellers in medieval Italy had a keen sense of the dangers to their health posed by conditions of overcrowding, shortages of food and clean water, air pollution, and the improper disposal of human and animal waste. He consults scientific, narrative, and normative sources that detailed and consistently denounced the physical and environmental hazards urban communities faced:

latrines improperly installed and sewers blocked; animals left to roam free and carcasses left rotting on public byways; and thoroughfares congested by artisanal and commercial activities that impeded circulation, polluted waterways, and raised miasmas. However, as Geltner shows, numerous administrative records also offer ample evidence of the concrete measures cities took to ameliorate unhealthy conditions. Toiling on the frontlines were public functionaries generally known as viarii, or "road-masters," appointed to maintain their community's infrastructures and police pertinent human and animal behavior. Operating on a parallel track were the camparii, or "field-masters," charged with protecting the city's hinterlands and thereby the quality of what would reach urban markets, taverns, ovens, and mills. *Roads to Health* provides a critical overview of the mandates and activities of the viarii and camparii as enforcers of preventive health and safety policies between roughly 1250 and 1500, and offers three extended case studies, for Lucca, Bologna, and the smaller Piedmont town of Pinerolo. In telling their stories, Geltner contends that preventive health practices, while scientifically informed, emerged neither solely from a centralized regime nor as a reaction to the onset of the Black Death. Instead, they were typically negotiated by diverse stakeholders, including neighborhood residents, officials, artisans, and clergymen, and fostered throughout the centuries by a steady concern for people's greater health.

Economía internacional Edward Elgar Publishing

Hardly anybody outside a company knows its products and processes better than its suppliers. Research confirms that intensive integration of suppliers in the value creation process positively influences the success of the company, particularly in highly competitive industries. This is a result of the progressing reduction in the depth of value creation of manufacturers and the increasing transfer of know-how towards suppliers. In multilevel business-to-business relationships, suppliers often have the best or the only access and comprehensive knowledge about the end users. Therefore, suppliers determine the scope of possible innovations, which most companies do not actively use. This unique volume provides a comprehensive overview of theories, concepts and especially empirical results on open innovation and the integration of suppliers. For this, authors from all over the world present their latest research results offering fascinating insights into collaborative approaches with suppliers.

Comercio exterior colombiano Harper Collins

Reviews the experience of five major emigration countries: India, Mexico, Morocco, the Philippines and Turkey over the last half century, in order to analyse the determinants and characteristics of migration and its significance for economy, society, politics and international relations.

The Economy of Prestige Walter de Gruyter GmbH & Co KG

Krugman and Obstfeld provide a unified model of open-economy macroeconomics based upon an asset-market approach to exchange rate determination with a central role for expectations. This ninth edition integrates research, data and policy in hot topics such as outsourcing, geographic geography and financial derivatives.

Area Handbook for Venezuela International Organization for Migration (IOM)

International Labour Migration to Europe's Rural Regions brings together intimate descriptions, theoretical analyses, and policy recommendations for this novel phenomenon that has the potential to transform lives of international migrants and local communities in Europe's rural regions.

International Economics Financial Times/Prentice Hall

This book presents strategies and models for cultural heritage enhancement from a multidisciplinary perspective. It discusses identifying historical, current and possible future models for the revival and enhancement of cultural heritage, taking into consideration three factors – respect for the inherited, contemporary and sustainable future development. The goal of the research is to contribute to the enhancement of past cultural heritage renovation and enhancement methods, improve the methods of spatial protection of heritage and contribute to the development of the local community through the use of cultural, and in particular, architectural heritage. Cultural heritage is perceived primarily through conservation, but that comes with limitations. If heritage is perceived and experienced solely through conservation, it becomes a static object. It needs to be made an active subject, which implies life in heritage as well as new purposes and new life for abandoned heritage. Heritage can be considered as a resource that generates revenue for itself and for the sustainability of the local community. To achieve this, it should be developed in accordance with contemporary needs and technological achievements, but on scientifically based and professional criteria and on sustainable models. The research presented in this book is based on the approach of Heritage Urbanism in a combination of experiments (case studies) and theory.

Urban Future 21 CRC Press

This text is written by a number of authors from different countries and disciplines, affording the reader an invaluable and unbiased perspective on the subject of intensive groundwater development. Based on information gathered from the experience of many countries over the last decades, the text aims to present a clear discussion on the conventional hydrogeological aspects of intensive groundwater use, along with the ecological, legal, institutional, economic and social challenges. Divided into two main sections, the first group of authors put forward the positive and negative aspects of intensive groundwater use, whilst a second group provide an overview of the situation specific countries face as a consequence of this phenomenon. Fully revised and up-to-date, *Groundwater Intensive Use* makes a significant number of discoveries in a subject area that is topical in today's climate.

Basic econometrics W. W. Norton & Company

How can human communities sustain a long-term existence on a small planet? This challenge grows ever more urgent as the threat of global warming increases. Planning for Sustainability presents a wide-ranging, intellectually well-grounded and accessible introduction to the concept of planning for more sustainable and livable communities. The text explores topics such as how more compact and walkable cities and towns might be created, how local ecosystems can be restored, how social inequalities might be reduced, how greenhouse gas emissions might be lowered, and how more sustainable forms of economic development can be brought about. The second edition has been extensively revised and updated throughout, including an improved structure with chapters now organized under three sections: the nature of sustainable planning, issues central to sustainable planning, and scales of sustainable planning. New material includes greater discussion of climate change, urban food systems, the relationships between public health and the urban environment, and international development. Building on past schools of planning theory, *Planning for Sustainability* lays out a sustainability planning framework that pays special attention to the rapidly evolving institutions and power structures of a

globalizing world. By considering in turn each scale of planning—international, national, regional, municipal, neighborhood, and site and building—the book illustrates how sustainability initiatives at different levels can interrelate. Only by weaving together planning initiatives and institutions at different scales, and by integrating efforts across disciplines, can we move towards long-term human and ecological well-being.

Sapiens McGraw-Hill Companies

The book examines the contemporary art system with a broad and systematic approach, through the application of models of microeconomics and industrial organizations. By breaking down the traditional barriers between different academic disciplines such as art and economics, this book offers a unique opportunity to grasp the complexities of the contemporary art world and provides the tools to conduct a structural analysis of that market. The result is an in-depth analysis of the contemporary art market from an interdisciplinary perspective. While it is not a textbook in the strictest sense, the book offers a concise and effective overview of all actors in the art system, and provides supporting data and valuable information, both conceptual and practical. It is therefore a text that can be used by students wishing to better understand the complex dynamics that govern the contemporary art market, but also by cultural managers, collectors, potential art investors or simply art lovers who need a quick reference.

Principles of Microeconomics World Bank Publications

Globalisation has not led to the 'death of geography'. Intensified relations between communities in different parts of the world have only highlighted the need for understanding and managing phenomena on a variety of geographic scales. From global warming to credit crunch, and from epidemics to terrorism, causes and solutions are sought on local, regional, national as well as inter-continental levels. With the advent of Geospatial Technology, scholars, policymakers and entrepreneurs have valuable tools in hand to proceed. This book offers the first systematic account of the science behind this mental and technological revolution. Tracing the adoption and dissemination of Geospatial Technology in a range of disciplines, it examines the impact this technology has had, and is likely to have, on the explanation of spatial behaviour, phenomena and processes. At the same time, stressing innovative usage, it explores scientific contributions to technology advancement.

Geospatial Technology and the Role of Location in Science Economia Internacional - 6.ed.

The COVID-19 pandemic has been a very strong reminder that the future economic development of any country is more than ever influenced by its ability to ramp-up digital competitiveness. Consequently, enterprises were pushed to assess and develop the possibilities offered by e-commerce and online marketing tools. In this book, experts outline the prerequisites for such online marketing competitiveness and compare the current level of digital marketing competitiveness in Europe by using publicly available macro and micro-level data. The authors present their analyses and recommendations including interviews with over 125 online marketers and e-commerce specialists and present the lessons from digitalization of over 600 SMEs.

Assets, Livelihoods, and Social Policy Routledge

ESTE LIBRO presenta de manera articulada los aspectos teóricos, históricos y de política económica del comercio internacional, desde la perspectiva del caso colombiano. La obra se estructura en dos partes. En la primera, se plantean las teorías clásicas, neoclásicas, las «nuevas teorías» del comercio internacional, los desarrollos referidos a la geografía económica y el cambio tecnológico e incluye un capítulo sobre las visiones alternas que señala las limitaciones de la teoría dominante del comercio internacional. EN LA SEGUNDA parte, se hace un análisis histórico y del marco institucional del comercio internacional desde el siglo XIX hasta la actualidad, para lo cual se introducen conceptos claves y algunos de los principales instrumentos relacionados con la política comercial del país; finaliza con la descripción de la canasta exportadora colombiana, los rasgos de diversificación y algunos casos de innovación industrial. EL TEXTO está elaborado como un manual de utilidad para profesores, estudiantes universitarios o cualquier persona interesada en entender los aspectos claves del comercio internacional y el papel que este ha jugado en la economía del país. La integralidad de los temas, su practicidad y la aplicabilidad al caso colombiano llenan un vacío en la literatura actual.

Cultural Urban Heritage Edward Elgar Publishing

"Our fourth streamlined edition arrives in the midst of some of the most dramatic upheavals ever witnessed, both in the economy generally and in higher education in particular. The COVID-19 pandemic has produced levels of unemployment not seen since the Great Depression and has created dramatic changes in the ways we teach across educational institutions at every level. These developments have reinforced our confidence in the instructional philosophy that motivated us to produce our first edition"--

The Economics of Contemporary Art World Scientific

The Internet has created the problem of an increasing need for innovation, but - as this volume explains - also provides the solution. The authors explore the collaborative potential offered by customers in digital environments to enhance the effectiveness of new product development.

The Historiography of Economics John Wiley & Sons

This book examines the integration of the international, global, and intercultural dimensions in contemporary education systems. Yemini provides a comprehensive understanding of the process of internationalization from different angles including policy-making, curriculum implementation, media discourse, and individual agency. The book illuminates and analyzes a set of key tensions of internationalization across multiple levels of schooling and across the domains of popular discourse, policy, curriculum, pedagogy, and students' identity, by connecting or re-connecting the process of internationalization and its outcomes at individual level of global citizenship. The author uses solid empirical embedding of each of those aspects together with development of novel theoretical insights in each of the investigated domains.

Internationalization and Global Citizenship University of Pennsylvania Press

New York Times Readers' Pick: Top 100 Books of the 21st Century New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity's creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition.

From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, *Sapiens* integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.

Intensive Use of Groundwater: Springer Science & Business Media

This ground-breaking new book builds upon the Schumpeterian creative response. The author shows that firms, in out-of-equilibrium conditions, try

and react by means of introducing innovations. The success of their reaction is contingent upon their access conditions to knowledge, which are shaped by the system in which they operate. The emergence of new innovations can, in turn, knock firms further out-of-equilibrium and cause changes in the system properties that govern their access to external knowledge. This path dependent loop of interactions between the system properties and the individual actions of firms, accounts for endogenous innovation and the dynamics of the system.

Experiences of Emerging Economy Firms Springer Nature

Livro-texto que oferece análise e tratamento consistentes das duas principais subdivisões da economia internacional: a teoria internacional do comércio e a política monetária internacional. Trabalha uma ampla variedade de fenômenos econômicos e assuntos emergentes, como mudanças na política comercial norte-americana, progresso na transição de economias de planejamento central para economia de mercado e aspectos especiais relacionados a nações em desenvolvimento.
