Orchids: Changeouts in the Kogod Courtyard. Smithsonian Gardens' horticulturists care for eight large planters throughout the courtyard and I've made two trips over the past couple weeks to help replace plants in two of the eight planters. With each planter over 300 square feet, it's quite the production. Behind the Orchids: Changeouts in the Kogod Courtyard ... GrowthEdit. Cymbidium plants are sympodial and grow to a height of 60 cm and the racemes as high as 90 cm. The raceme grows from the base of the most recent pseudobulb. Each flower can have a diameter of 5 to 10 cm, according to the species. They bloom during the winter, and each plant can have up to fifteen or more flowers. Cymbidium - Wikipedia Some flowering plants are promiscuous, relying on enticement and reward to lure whatever insect comes along. But orchids typically have exclusive relationships with their pollinators. These are usually bees, wasps, and flies, but many orchids also utilize moths, butterflies, fungus gnats, or birds to cross-pollinate their flowers.
