Textbook of Veterinary Anatomy John Wiley & Sons

"Quite simply this is an excellent book. It is well-written, with snatches of dry humour. It should be mandatory reading for anybody who keeps a dog

or has intentions of so doing." -R. W. F. Poole, Daily Telegraph How do dogs perceive the world about them? How do they see, hear, learn, relate to their owners? How large are their brains, what is their emotional makeup? Why do they suffer from stress and how can it be coped with? Over the last few years a substantial body of knowledge has been built up about the psychology of dog behavior. Combining more than twenty years of practical experience as a veterinary clinician with a personal knowledge and understanding of the latest international research, Dr. Bruce Fogle has written the most inclusive and relevant book on how the canine mind works.

This book provides the veterinary practitioner with an explanation of the meaning of laboratory results (biochemical, haematological and urinary) in the diagnosis of disorders in small animals. It enables veterinary surgeons in small animal practice to interpret the results of those laboratory tests

that are commonly performed in order to arrive at a diagnosis or prognosis. Research has shown that this is one skill in which many veterinarians believe themselves to be deficient and would welcome guidance. This volume explains the possible meanings of the values that could be obtained. The book covers the areas of haematology, plasma/serum biochemistry and urinalysis. Advice is given on the influence of drugs, sample collection and handling, how to check the accuracy of results, how to assess the reliability of a laboratory and the additional tests that would be indicated to confirm a diagnosis together with normal reference ranges and conversion ranges

It is only in recent years that aromatherapy, or essential oil therapy, has gained substantial acceptance; this is primarily due to French veterinarians who have begun using essential oils and hydrosols in their practices. Laypeople, of course, have been enjoying great success treating animals with the very same substances for many years; for it is not just the medical professionals who can safely and effectively administer these aromatic oils. Anyone enabled with quality essential oils or hydrosols and adequate knowledge can use a plant's most concentrated and energetic byproducts to improve the health of their animals, and treat and prevent various illnesses and common ailments. Aromatherapy is actually a science that has a much larger archive of supported scientific data than most other holistic care methods. However, most of these studies were originally published in French or German. Aromatherapy was the first natural, holistic therapy the author began using, and she relies on it as my primary form of healthcare to treat and balance all sorts of minor ailments and discomforts in the lives of her family and their pets. She has rarely needed to use any other sort of remedy to achieve the desired result. These powerful substances are the most fascinating, sensual and complex of all natural therapies -- a combination that proves to be so enthralling it eventually develops into a grand passion for many.
