CLINTON HEATH

Guidelines for Project Evaluation John Wiley & Sons
 This comprehensive book gives a conceptual, analytical and evaluative study of the principles and practices of Project Management and Control systems in a student-friendly manner. The book provides an overview of project management, and gives a detailed analysis of project life cycle and its different phases, identification of project opportunities, and sources of project ideas. It describes in detail various considerations and priorities in setting up projects at macro and micro levels, project appraisal, and various types of organisation structures. Besides, the book also explains the different ways and means of financing projects, the sources of finance nationally and internationally, the need for estimation of project cost, and different aspects of post-project review. Finally, the book dwells on computer aided project management to demonstrate how the computer can help the management in handling all project activities efficiently. Primarily intended as a text for the postgraduate students of commerce

and management, the book can also be authoritatively used by the researchers, project managers, consultants, and corporate policy and decision makers. **KEY FEATURES :** Describes various aspects of contract management in great detail with live examples. Explains the risks encountered by MNCs in an international project and the remedies available to handle these risks effectively. Contains a Glossary to explain the core concepts. Provides a large number of graphs, charts, tables, illustrative examples and appendices to help readers in analytical understanding of the subject.

Private Foreign Investment in Developing Countries Edward Elgar Publishing

The techniques and methods of project appraisal in developing countries have been considerably expanded and refined since they were first introduced in the late 1960s. This up-to-date and authoritative survey volume demonstrates the ways in which cost-benefit analysis has developed in response to changes in economic circumstances and conditions over the past three decades. An international group of academic and professional economists covers areas including problems in the practical application of cost-benefit techniques by international agencies,

the treatment of income distribution, discounting, the effects method, the logical framework as a complement to project appraisal, aid tying, risk criteria in decision making, benefit valuation in the water sector, the appraisal of technical assistance projects, privatization in transition economies and shadow pricing in transition economies. Professor Kirkpatrick and Professor Weiss have prepared an insightful overview essay introducing the broad selection of work presented in this volume.

Analysis And Evaluation World Bank Publications

The rationale for social benefit-cost analysis; Commercial profitability and its limitations; National economic profitability; Aggregate-consumption objective: measurement of direct benefits; Aggregate-consumption objective: measurement of direct costs; Measurement of indirect benefits and costs; The redistribution objective; The employment objective; Total net benefit of the project: a summing up; Project evaluation under uncertainty; The role of national planning in project formulation and evaluation; National parameters: meaning, significance and derivation; Intertemporal choice: the social rate of discount; Intertemporal choice: the social value of investment; The shadow wage in a surplus-labours economy; The value of foreign exchange; Co-ordination of investment decisions; Conflict and choice: a summing up; Social benefit-cost analysis of a pulp and paper mill in Sarania; Social benefit-cost analysis of a chemical plant in Palavia; Social benefit-cost analysis of the Managua water project; Fibreboard plant in oasis.

The Role of Benefit-Cost Analysis Springer Science & Business Media

For the first time, a formal benefit-cost requirement plays an integral role in U.S. environmental policymaking, and in this volume, some of the nation's leading experts on environmental policy appraise the effects of President Reagan's Executive Order No. 12291. By considering how the Environmental Protection Agency has responded to 12291, these essays identify the limitations of conventional practices of benefit-cost analysis. Originally published in 1984. A UNC Press Enduring Edition -- UNC Press Enduring Editions use the latest in digital technology to make available again books from our distinguished backlist that were previously out of print. These editions are published unaltered from the original, and are presented in affordable paperback formats, bringing readers both historical and cultural value.

Project Analysis in Developing Countries Mittal Publications

The Book Is Primarily Intended To Serve As A Textbook For Undergraduate As Well As Postgraduate Students Of Management Studies. The Book Covers The Syllabus Prescribed By Most Universities/Institutes In India On The Subject Project Management . The Book Will Also Be Of Use To Commerce Students And For Students Of Professional Courses Like Aicwa, Aca And Cfa.All Aspects Of Projects, Viz., Project Identification, Project Appraisal, Project Planning And Scheduling, Project Implementation, Project Evaluation And Post Audit Of Projects Have Been Covered. The Book Also Touches Upon Finer And Practical Aspects Of Project Analysis And Implementation Which Will Be Of Great Use To Entrepreneurs.The Subject Matter Has Been Presented In A Simple And Lucid Form. Project Scheduling Techniques Have Been Explained In Detail With The Aid Of Graded Examples To Bring Home The Concepts Clearly. Though The Book Is Mainly Addressed To Students, It Will Be Equally Useful To Project Appraisers, Project Managers And Entrepreneurs As Well.

Development Planning and Poverty Reduction Elsevier

Evaluation is a controversial and little-understood strategy of public governance, control, and decision making. As early as classical antiquity, scholars were summoned to court to counsel kings. Public policy and program evaluation is a recent addition to the great chain of attempts to use the brainpower of scholars and scientists to further the interests of the state. Evaluation scholars are asked to provide retrospective assessments of the implementation, output, and outcome of government measures in order to effect deeper understanding and well-grounded decisions on the part of those in charge of government operations. Evaluation is the process of distinguishing the worthwhile from the worthless, the precious from the useless; evaluation implies looking backward in order to be able to steer forward better. Written from a political science perspective, Public Policy and Program Evaluation provides an overview of the possibilities and limits of public sector evaluation. Evert Vedung examines evaluation as a mechanism for monitoring, systematizing, and grading government activities and their results so that public officials, in their future-oriented work, will be able to act as responsibly, creatively, and efficiently as possible. Topics discussed include: "Evaluation, Rationality, and Theories of Public Management"; "Models of Evaluation"; "Internal or External Evaluation"; "Impact Assessment as Tryout and Social Experimentation"; "Process Evaluation and Implementation Theory"; "The Eight-Problems Approach to Evaluation"; and "Uses and Users of Evaluation." All evaluation rests upon the idea that perceptions, opinions, intentions, judgments—in short, everything concerned with the world of human consciousness—play such interesting roles in political and administrative action that their functions are worth investigating. Through experience, humans may learn from past actions. The interventions of the modern state are so extensive, their execu

Urban low-income housing and development Springer Science & Business Media

This book aims to be an introduction and support to the carrying out of financial and economic analysis of a country's projects. It uses a case study of a joint venture between domestic and foreign investors in a developing country to show how the theoretical analysis relates to real life. The financial and economic analyzes are systematically linked. All aspects which are considered significant are treated in separate steps, thereby simplifying the evaluation process for the reader.

The UNIDO Method of Economic Project Evaluation Bib. Orton IICA / CATIE

This study is the result of research undertaken by the Netherlands Economic Institute, Division Balanced International Growth, Rotterdam, under the auspices of the O.E.C.D. Development Centre. In the division of labour agreed with professor Grant L. Reuber, who directed a parallel study under the auspices of the Centre', the N.E.I. research deals with the evaluation of economic effects of private foreign investment in developing countries. The effects studied are confined to macro-economic effects which are quantifiable. The lack of a satisfactory methodology for the assessment of these effects seemed to justify this limitation in the approach to the evaluation of private foreign investment. The study is organized as follows.

Part I reviews briefly and critically the literature about the evaluation of private foreign investment and suggests the need for an appropriate macro-economic methodology. Part II develops the principles and techniques for such a methodology which is applied empirically to data for five developing countries in Part III. While Parts II and III are concerned with the effects of aggregated volumes of private foreign investment of the previous parts, the appraisal of individual projects, Part IV considers, independently projects financed through foreign investment and discusses the special features of social benefit-cost analysis of such projects. *A case study in Peninsular Malaysia* Harvard University Press

Funding private projects in emerging markets - in a safe manner - requires a thorough evaluation and analysis of several aspects that are constituent to the project itself, to the specific country where it is located, and to the project owners. The author has studied the functioning of Financial Markets in developing countries for several years, compared them to International Financial Markets, and has come to the conclusion that the contributions made in the past do not cover all the information required in order to judge and secure the viability of projects in these countries. By developing a model and researching its components breakdown, the author has attempted to fulfill all the requirements necessary to accomplish this purpose. The methodology used was basically a result of a detailed research throughout years of experience, to verify and analyze documentation related to different types of projects recommended for funding located in several developing countries. The collected data during the verification process of each project have been significant to their outcome and have assisted me for the development of the model presented in this Dissertation. In addition, related studies by professionals in the field (Bankers, Economists, Financial Analysts, etc.) have been examined and partially incorporated in this Dissertation in order to make a significant parallel to the components of the model.

Projects 7/E Springer

Resources, Values and Development contains many of Amartya Sen's path-breaking contributions to development economics, including papers on resource allocation in nonwage systems, shadow pricing, employment policy, welfare economics, poverty assessment, gender-based inequality, and hunger and famines.

The Essentials of the UNIDO Approach to Benefit-cost Analysis International Labour Organization

Presents a selection of topics of special interest and relevance to eight Pacific Island countries that are member of the World Bank (PMCs)--Fiji, Federated States of Micronesia, Kiribati, Marshall Islands, Solomon Islands, Tonga, Vanuatu, and Western Samoa. The themes selected are: the impact of recent changes in the external trading environment of the PMCs; economic diversification into tourism; improving the management of and getting better returns for natural resources such as fisheries and forestry; and regional cooperation. The report also includes profiles of these eight countries.

Public Policy and Program Evaluation New Age International

The research project of which the present study is the end result was initiated in late 1970, while I was affiliated with the Economisch Instituut voor de Bouwnijverheid (Economic Institute for the Construction Industry), Amsterdam, the Netherlands. This institution, in association with the Urban Development Authority, Kuala Lumpur, Malaysia, also supported fieldwork in Malaysia from early 1973 to spring 1975. This resulted in a report to the Malaysian government (Wegelin, 1975), which forms the basis of the present study. Improvement and extension of the earlier report to mould the study in its present shape has been made possible by the financial support of the Stichting Wetenschappelijk Onderwijs in Economische en Sociale Aspecten

van Bouwproductie en Bouwnijverheid (Foundation for University Education in Economic and Social Aspects of Construction), Amsterdam, the Netherlands. The support of the above institutions is gratefully acknowledged. The study owes much to the pioneering work on low-income housing in developing countries by Charles Abrams and has further been stimulated particularly by the contributions of Leland S. Bums and John F.C. Turner in this field. The recent development of comprehensive cost benefit appraisal methods for industrial projects in developing countries by Professor I.M.D. Little and J.A. Mirrlees (OECD) and A.K. Sen, P. Dasgupta and S.A. Marglin (UNIDO) provided a challenge to apply similar methods in the area of low-income housing.

The Social Value of Investment and the Shadow Wage Rate Routledge

Examines the economic impact of aid, but not in the sense that it questions the relevance of this objective, or tries to measure whether aid works or not. The focus of this book is on the evaluation process itself. Can aid evaluation be improved in order to increase the effectiveness of aid?

A Guide to the Guidelines World Bank Publications

For over fifty years project analysis techniques have been applied in the assessment of development projects where poorly designed and appraised projects can waste scarce resources. This study examines the continued relevance of this approach, assesses methodological developments over this period and investigates current practical problems in the application of these techniques. This major work brings together authors with experience of both academic and operational project work to focus on issues such as the shadow exchange rate, the shadow wage, the discount rate and assessment of poverty impact and risk, as well as problems relating to specific sectors covering environmental projects, transport, education and health. There are also general chapters on the experience of semi-input-output-based estimation of shadow prices and the relevance of shadow pricing techniques to the context of developed economies in the EU. An overview by the editors sets out the evolution of the literature and highlights current issues. The general conclusion is that project analysis techniques remain relevant, albeit within a very different development context to that in which they were originally envisaged to be applied. With new perspectives on key economic parameters, this book will appeal to academics working on development, officials involved with project aid programmes, postgraduate students of development and professional economists working on development projects.

The Shadow Price of Foreign Exchange Tata McGraw-Hill Education

The stated aim of much development assistance is the reduction of poverty. This book examines how development interventions might be more effectively targeted to achieve this aim. Part One provides an overview of planning for poverty reduction, and evidence on the extent and causes of poverty. Part Two examines participatory approaches to development planning. Part Three assesses macro-economic strategies and programmes for poverty reduction. Part Four concludes with a microeconomic analysis of the distribution of benefits from investment projects.

Project management Springer

First published in 1984, this textbook analyses, at both aggregate and micro economic levels, the contemporary industrial conditions in Third World countries and relates this to the process of economic growth and structural transformation. Drawing upon both industrial and development economics, the authors offer a comprehensive and integrated treatment of the different levels of industrial analysis in less developed countries, alongside a wealth

of comparative data on industrial structure, business concentration and behaviour, and industrial policies in a cross-section of countries in Africa, Asia, the Far East and Latin America.

Guide to Practical Project Appraisal Presses inter Polytechnique
 Make more informed project investment decisions by knowing what issues to examine in the planning process and how to analyze their impacts Poor or insufficient planning is primarily responsible for the inordinate number of idle and rusting capital facilities around the world, with investment decisions often made on the basis of either intuition or inadequate analysis. Investment Project Design: A Guide to Financial and Economic Analysis with Constraints alerts potential investors and other stakeholders to precipitous changes in the investment milieu as a result of constraints on resources and infrastructure, economic and political turmoil, and population growth. The guide Includes descriptions of specific methods of financial and economic analysis for new investments and for expansion of an existing enterprise Covers project risk assessment, mitigation and avoidance Provides real-life case studies, adapted for presentation, and addresses the design of projects large and small, as well as those in both private and public sectors Features spreadsheet layouts and computations Investment Project Design is the ultimate resource in the methods of designing and appraising investment projects
Current Issues in Project Analysis for Development PHI Learning Pvt. Ltd.

This pilot study - the first to analyze the World Bank's lending policy in the Second United Nations Development Decade - concentrates on the Bank's shift in emphasis from traditional infrastructure projects to "new style" projects, especially in the area of rural development, and on the resulting changes in lending criteria in the 1970s. Basing her conclusions on two years of independent research and access to confidential materials, Dr. Hurni evaluates the World Bank's work; gives a good overall view of current development problems - including implementation of the "growth with equity" strategy - and their possible solutions; shows the effects of the new development goals in borrower and creditor countries, as well as on the institutional decision-making process; and offers recommendations for improvement of the Bank's evaluation methodology and operational structures. She presents a clear picture of the positive and negative aspects of the World Bank as a multilateral investment model and shows its bridge-building function in the great North-South controversy.
The Unido Method of Economic Project Evaluation Routledge
 Projects presents the entire gamut of capital budgeting. The book discusses the key principles and techniques for evaluating capital expenditure proposals, as well as strategic, qualitative and organizational considerations impacting capital budgeting decisions. Further, it suggests ways of improving project appraisal and capital budgeting practices, and also describes and evaluates business practices in various areas. Highlights of the seventh edition: * Substantial revision of nine chapters* Fifteen new sections* Four new mini cases* Online solutions manual and power point slides for instructors and spreadsheets for students.
