The Elements has become an international sensation, with over one million copies in-print worldwide. The highly-anticipated paperback edition of The Elements is finally available. An eye-opening, original collection of gorgeous, never-before-seen photographic representations of the 118 elements in the periodic table. The elements are what we, and everything around us, are made of. But how many elements has anyone actually seen in pure, uncombined form? The Elements provides this rare opportunity. Based on seven years of research and photography, the pictures in this book make up the most complete, and visually arresting, representation available to the naked eye of every atom in the universe. Organized in order of appearance on the periodic table, each element is represented by a spread that includes a stunning, full-page, full-color photograph that most closely represents it in its purest form. For example, at -183°C, oxygen turns from a colorless gas to a beautiful pale blue liquid. Also included are fascinating facts, figures, and stories of the elements as well as data on the properties of each, including atomic weight, density, melting and boiling point, valence, electronegativity, and the year and location in which it was discovered. Several additional photographs show each element in slightly altered forms or as used in various practical ways. The element's position on the periodic table is pinpointed on a mini rendering of the table and an illustrated scale of the element's boiling and/or melting points appears on each page along with a density scale that runs along the bottom. Packed with interesting information, this combination of solid science and stunning artistic photographs is the perfect gift book for every sentient creature in the universe. Includes a tear-out poster of Theodore Gray's iconic Photographic Periodic Table!

My Epic Fairy Tale Fail Apress

The first study devoted to a single sculptor in ancient America, as understood through four unprovenanced masterworks traced to a small sector of Guatemala. In 1950, Dana Lamb, an explorer of some notoriety, stumbled on a Maya ruin in the tropical forests of northern Guatemala. Lamb failed to record the location of the site he called Laxtunich, turning his find into the mystery at the center of this book. The lintels he discovered there, long since looted, are probably of a set with two others that are among the masterworks of Maya sculpture from the Classic period. Using fieldwork, physical evidence, and Lamb's expedition notes, the authors identify a small area with archaeological sites where the carvings were likely produced. Remarkably, the vividly colored lintels, replete with dynastic and cosmic information, can be assigned to a carver, Mayuy, who sculpted his

name on two of them. To an extent nearly unique in ancient America, Mayuy can be studied over time as his style developed and his artistic ambition grew. An in-depth analysis of Laxtunich Lintel 1 examines how Mayuy grafted celestial, seasonal, and divine identities onto a local magnate and his overlord from the kingdom of Yaxchilan, Mexico. This volume contextualizes the lintels and points the way to their reprovancing and, as an ultimate aim, repatriation to Guatemala.

This book reflects the many changes that computer graphics technology has undergone in my working life time. I graduated from a teachers college in 1963. There was not a computer of any kind

on campus, imagine my shock when my very first college employer (Omaha University) required me to know something about an IBM 1620 and a key punch machine! The first part of this book is an account of that experience at Omaha University and later the Nebraska of Nebraska at Omaha. When I moved to Clemson University in 1976, they had a computer and a large Calcomp Plotter but nothing else in the way of computer graphics hardware or software. So, except for a few short sections in chapter one, this history begins with the events of 1963 and proceeds to document what happened to computer graphics for engineering design and manufacturing as practiced by an engineer or technician at Clemson University. The next section of the book contains my experiences as a self-employed consultant (1993-present), my consulting started in 1984 after I completed a PhD in Data Systems Engineering. In 1993, I left full time teaching and became Professor Emeritus at Clemson University. I wanted to start my own consulting company, DLR Associates. Oddly enough, most of my first consulting in computer graphics took place in the Omaha and Pennsylvania areas - not South Carolina. My contacts came from my paper presentations at various ASEE meetings and the annual national distance learning conferences held at the University of Maine. I took a year off to accept a Fulbright Scholarship Nomination from the University of Roorkee, India. I was listed as an international member in the Who's Who Directory of the computer graphics industry. In a nut shell, that is who I am. Why, then, did I decide to write this book?
