 Arista Design Guide Data Center This design guide describes an Arista solution for providing simple, robust, and cost-effective datacenter interconnection (DCI) that enables layer-2 services to be bridged between multiple sites over existing layer-3 IP networks. Design and Deployment Guides - Arista The L3LS network design is a two-tier architecture comprising of 2-128 spine switches and one or more Top-of-Rack (ToR) leaf switches. Leaf switches provide connectivity to storage, compute, service, and data center edge network elements. Leaf switches may be deployed by themselves or in a pairs for high availability.
