"Professor Yang and Dr. Zheng are two of the passionate young researchers in the field with a lot of hands-on experience. Professor Ni, on the other hand, is a veteran in wireless technologies, 2.5G/3G cellular phones, and embedded systems. The energy, the hands-on experience, and the long-term vision ensure that the book is of highest quality." --From the foreword by Ya-Qin Zhang, Corporate Vice President for Research, Microsoft China The second-generation Smartphone applications are exclusively designed to leverage the advantages of mobility and ubiquitous wireless access. This book provides you with an in-depth look at software development issues and design guidelines, and helps you gain the skills you need to develop your own efficient and feature-rich Smartphone applications that utilize the latest cutting-edge technologies. Complete with code and examples, the book first walks you through the Microsoft Smartphone platform from a software developer's perspective. It

next uncovers the .NET Compact Framework as well as the Smartphone programming environment. You'll then find detailed information on Microsoft Smartphone-related application design and programming topics in the domains of the .NET Compact Framework (managed code). Plus, you'll explore advanced development topics such as security and performance considerations that you'll be able to incorporate into your own applications. What you will learn from this book \* How to use the programming framework and classes available in Windows Mobile and Smartphone SDK \* The fundamentals of .NET Compact Framework 2.0 \* Techniques for developing your own robust Smartphone applications \* Steps for customizing components and P/Invoke \* How to enhance data and communication security \* Ways to improve the performance of your applications \* Fundamental techniques for supporting world-ready applications Who this book is for This book is for software architects and developers working in the area of mobile application development as well as professionals who want a quick and thorough overview of the Microsoft Smartphone software development platform. Wrox Professional guides are planned and written by working programmers to meet the real-world needs of programmers, developers, and IT professionals. Focused and

relevant, they address the issues technology professionals face every day. They provide examples, practical solutions, and expert education in new technologies, all designed to help programmers do a better job.

RFID (radio-frequency identification) is increasing its presence in our personal and business lives—you name it and RFID is likely to be finding its way there. RFID has many advantages over other auto-ID technologies, including its ability to read tags at the item level while the items are still in boxes and pallets and out of line of sight. In addition, RFID tags are reusable, which helps reduce the costs associated with an RFID system. RFID is a technology that can provide decision makers with real-time information to result in better and timelier decisions. It can help increase efficiency, security, and asset control. This second edition contains updated information on the technology and its uses, new and updated examples, and a new case study. This book provides readers with no prior knowledge of RFID with the basics of the technology, guidelines for considering its use, examples of how RFID is being used effectively in a variety of organizations, and guidelines for implementing an RFID system.

In recent years, our world has experienced a profound shift and progression in available computing and knowledge sharing innovations. These emerging advancements have developed at a rapid pace, disseminating into and affecting numerous aspects of contemporary society. This has created a pivotal need for an innovative compendium encompassing the latest trends, concepts, and issues surrounding this relevant discipline area. During the past 15 years, the Encyclopedia of Information Science and Technology has become recognized as one of the landmark sources of the latest knowledge and discoveries in this discipline. The Encyclopedia of Information Science and Technology, Fourth Edition is a 10-volume set which includes 705 original and previously unpublished research articles covering a full range of perspectives, applications, and techniques contributed by thousands of experts and researchers from around the globe. This authoritative encyclopedia is an all-encompassing, well-established reference source that is ideally designed to disseminate the most forward-thinking and diverse research findings. With critical perspectives on the impact of information science management and new technologies in modern settings, including but not limited to computer science, education, healthcare, government, engineering, business, and natural and physical sciences, it is a pivotal and relevant source of knowledge that will benefit every professional within the field of information science and technology and is an invaluable addition to every academic and corporate library.

Dear Reader This is a book about mobile virtual work. It aims at clarifying the basic concepts and showing present practices and future challenges. The roots of the book are in the collaboration of few European practitioners and - searchers, who met each other under the umbrella of the Swedish SALTSA programme (see next page) in January 2002 in Stockholm. The group was first called 'ICT, Mobility and Work Organisation' but redefined itself quickly as 'Mobile Virtual Cooperative Work' group. The change of the name reflects the development of reasoning in the group. We could not find much material on mobile work, certainly not systematic studies, - though a growing interest in mobile technologies and services could be found. Practices of telework and virtual organizations were better known, but we were convinced that the combination with mobile work was so- thing different and new. Our main target became to understand what it was all about. The next step was an expert meeting in October 2004 at Rånäs Castle again in Sweden. A wider group of experts was invited to present their views on mobile virtual work and ideas about book chapters from different perspectives of working life. Some of the expertise could be found through the network of the AMI@Work family created by the New Working En- ronments unit of the European Commission's Information Society Directorate-General. Also close collaboration was developed with the related MOSAIC program.

The two-volume Emergency Medical Services: Clinical Practice and Systems Oversight delivers a thorough foundation upon which to succeed as an EMS medical director and prepare for the NAEMSP National EMS Medical Directors Course and Practicum. Focusing on EMS in the 'real world', the book offers specific management tools that will be useful in the reader's own local EMS system and provides contextual understanding of how EMS functions within the broader emergency care system at a state, local, and national level. The two volumes offer the core knowledge trainees will need to successfully complete their training and begin their career as EMS physicians, regardless of the EMS systems in use in their areas. A companion website rounds out the book's offerings with audio and video clips of EMS best practice in action. Readers will also benefit from the inclusion of: A thorough introduction to the history of EMS An exploration of EMS airway management, including procedures and challenges, as well as how to manage ventilation, oxygenation, and breathing in patients, including cases of respiratory distress Practical discussions of medical problems, including the challenges posed by the undifferentiated patient, altered mental status, cardiac arrest and dysrhythmias, seizures, stroke, and allergic reactions An examination of EMS systems, structure, and leadership

Wireless sensor Networks: Vehicle and Space Applications describes the practical perspectives in using wireless sensor networks (WSN) to develop real world applications that can be used for space exploration. These applications include sensor interfaces, remote wireless vehicles, space crew health monitoring and instrumentation. The material discusses how applications of WSN originally developed for space travel and exploration are being applied and used in multiple real world applications, allowing for the development of smart systems that have characteristics such as self healing, self diagnosis, and

emergency healthcare notification.

Upstart Business Consulting Group ("UBCG") creates comprehensive business plan kits for a variety of businesses and industries. This particular kit focuses on starting a mobile car wash company. When you purchase one of our business plan kits, you will have access to the tools that will allow you to be an entrepreneur. We only create business plan kits for businesses that can capitalize on current trends and consumer demand. All businesses we cover require an initial start-up capital investment of \$1,000 to \$10,000. Although the required start-up capital is relatively small, you will have the potential for substantial cash flow and a high return on investment. The format of the business plan kits are modeled after business plans that have been used in successful start-up companies. These business plan kits are for those individuals who want a better work/life balance, want the

flexibility, pride, and fulfillment that comes with being an entrepreneur, and want to earn extra income.

The First International Conference on Mobile Lightweight Systems (MOBILIGHT) was held in Athens during May 18-20, 2009. The decision to organize a scientific event on wireless communications, where competition is really enormous, was motivated by discussions with some colleagues about the current unprecedented request for lightweight, wireless communication devices with high usability and performance able to support added-value services in a highly mobile environment. Such devices follow the user everywhere he/she goes (at work, at home, while travelling, in a classroom, etc.), but also result in exciting - search, development and business opportunities. Such a scenario clearly demands significant upgrades to the existing communication paradigm in terms of infrastructure, devices and services to support the anytime, anywhere, any device philosophy, introducing novel and fast-evolving requirements and expectations on research and development in the field of information and communication technologies. The core issue is to support the desire of wireless users to have 24/7 network availability and transparent access to "their own" services. *Mobile DevOps Playbook* Springer Science & Business Media
