The breadth of scientific and technological interests in the general topic of photochemistry is truly enormous and includes, for example, such diverse areas as microelectronics, atmospheric chemistry, organic synthesis, non-conventional photoimaging, photosynthesis, solar energy conversion, polymer technologies, and spectroscopy. This Specialist Periodical Report on Photochemistry aims to provide an annual review of photo-induced processes that have relevance to the above wide-ranging academic and commercial disciplines, and interests in chemistry, physics, biology and technology. In order to provide easy access to this vast and varied literature, each volume of Photochemistry comprises sections concerned with photophysical processes in condensed phases, organic aspects which are subdivided by chromophore type, polymer photochemistry, and photochemical aspects of solar energy conversion. Volume 34 covers literature published from July 2001 to June 2002. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading authorities in the relevant subject areas, the series creates a unique service for the active research chemist, with regular, in-depth accounts of progress in particular fields of chemistry. Subject coverage within different volumes of a given title is

similar and publication is on an annual or biennial basis.

Inspired by naturally occurring light-active molecular systems such as photosynthesis, scientists have long devoted their efforts to understanding how light and molecules interact. Based on a raft of knowledge on light absorption, energy migration and electron transfer, fluorescence and phosphorescence, and various photochemical reactions, light can now be utilized for energy conversion, information storage, medical applications, and development of next-generation photofunctional materials that cannot be obtained via conventional organic synthesis. This book overviews some of the cutting-edge p-conjugated molecular and polymer materials for organic photovoltaics, artificial photosynthesis, and organic light-emitting devices. It gives insights into the interactions between light and molecules and discusses sophisticated molecular designs, self-assembly and self-organization strategies, and state-of-the-art unconventional analytical methods.

"Biochar is the carbon-rich product when biomass (such as wood, manure, or crop residues) is heated in a closed container with little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil amendment to increase crop yields. In addition to this, biochar sequestration, in combination with sustainable biomass production, can be carbon-negative and therefore used to actively remove carbon dioxide from the atmosphere, with major implications for mitigation of climate change. Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process. This book is the first to synthesize the expanding research literature on this topic. The book's interdisciplinary approach, which covers engineering, environmental sciences, agricultural sciences, economics and policy, is a vital tool at this stage of biochar technology development. This comprehensive overview of current knowledge will be of interest to advanced students, researchers and professionals in a wide range of disciplines"--Provided by publisher.

Leading basic and clinical investigators from around the world summarize the most recent research on the molecular

and cellular origins of lupus. Their cutting-edge articles review the mechanisms underlying abnormal immunity and introduce the powerful new concept that a disorder of multiple genes underlies the abnormal immune response, leading directly to the development of lupus. This pathophysiology is shown to involve a wide variety of cell types, including T cells, B cells, natural killer cells, macrophages/monocytes, and endothelial cells. Over time, the resulting long-term inflammation causes irreversible cell destruction and, ultimately, organ failure. Lupus: Molecular and Cellular Pathogenesis is a masterful new synthesis of all the new knowledge emerging today about lupus. Its new perspectives will sharpen the focus of research and ultimately lead to better and more effective treatment.

Beginning with an introduction to the pathogenesis of the disease, the following chapters are each dedicated to a different condition that may manifest itself in tandem with, or as a result of endometriosis, including uterine fibroids, cysts, adenomyosis, ovarian cancer and subfertility. The effects of endometriosis on the urinary tract, gastrointestinal tract and the thoracic organs, are also discussed. *November 1* Elsevier

Throughout the world as in the United States, psychologists are increasingly being called upon to evaluate clients whose backgrounds differ from their own. It has long been recognized that standard personality and psychopathology assessment instruments carry cultural biases, and in recent years, efforts to correct these biases have accelerated. The Handbook of Cross-Cultural and Multicultural Personality Assessment brings together researchers and practitioners from 12 countries with diverse ethnic and racial identities and training to present state-of-the-art knowledge about how best to minimize cultural biases in the assessment of personality and psychopathology. They consider research methodology, the design and construction of standard objective and projective tests, the use of measures of acculturation, racial identity, and culture-specific tests, the social etiquette of service delivery, and the interpretation of test data for clinical diagnosis. Ranging widely through all the

relevant issues, they share a common collective vision of how culturally competent services should be delivered to clients. The Handbook offers the first comprehensive view of a consistent approach to cultural competence in assessment--a necessary precursor of effective intervention. It will become an indispensable reference for all those whose practice or research involves individuals with different ethnic and racial identities.
