Making Hong Kong

SAGE

This book describes a three-year research project which built on students' learning experience, and addresses the issue of individual differences in mainstream primary schools in Hong Kong. The Learning Study model described in this volume presents a view of learning which stems from a humanistic interest, and stresses on the possible "experiences" that the student has gone through in their learning process. This

project went through cycles of action research in implementing, evaluating and modifying a lesson. A total of 29 Learning Studies were conducted and the results showed remarkable improvement in students' learning outcomes. Participant teachers also found the Learning Study model useful in their professional development. *Researching and Analyzing Vocabulary* Cambridge University Press
Teacher Language Awareness (TLA) is an area of increasing interest to those involved in language

teacher education. This book provides an introduction to the nature of TLA, assesses its impact upon teaching and its potential impact on learning. The book focuses specifically on grammar. It aims to encourage teachers and others involved in language education to think more deeply about the importance of TLA and to adopt a more principled approach to the planning of those parts of their programmes associated with it.

An approach to performance-based assessments that embeds assessments in digital games in order to measure how students are progressing toward

targeted goals. To succeed in today's interconnected and complex world, workers need to be able to think systemically, creatively, and critically. Equipping K-16 students with these twenty-first-century competencies requires new thinking not only about what should be taught in school but also about how to develop valid assessments to measure and support these competencies. In *Stealth Assessment*, Valerie Shute and Matthew Ventura investigate an approach that embeds performance-based assessments in digital games. They argue that using well-designed games as vehicles to assess and support learning will

help combat students' growing disengagement from school, provide dynamic and ongoing measures of learning processes and outcomes, and offer students opportunities to apply such complex competencies as creativity, problem solving, persistence, and collaboration. Embedding assessments within games provides a way to monitor players' progress toward targeted competencies and to use that information to support learning. Shute and Ventura discuss problems with such traditional assessment methods as multiple-choice questions, review evidence relating to digital games and learning, and illustrate the

stealth-assessment approach with a set of assessments they are developing and embedding in the digital game Newton's Playground. These stealth assessments are intended to measure levels of creativity, persistence, and conceptual understanding of Newtonian physics during game play. Finally, they consider future research directions related to stealth assessment in education.

Many health care practitioners and researchers are aware of the need to employ factor analysis in order to develop more sensitive instruments for data collection. Unfortunately, factor analysis is not a

unidimensional approach that is easily understood by even the most experienced of researchers. Making Sense of Factor Analysis: The Use of Factor Analysis for Instrument Development in Health Care Research presents a straightforward explanation of the complex statistical procedures involved in factor analysis. Authors Marjorie A. Pett, Nancy M. Lackey, and John J. Sullivan provide a step-by-step approach to analyzing data using statistical computer packages like SPSS and SAS. Emphasizing the interrelationship between factor analysis and test construction, the authors examine numerous practical and theoretical decisions

that must be made to efficiently run and accurately interpret the outcomes of these sophisticated computer programs. This accessible volume will help both novice and experienced health care professionals to increase their knowledge of the use of factor analysis in health care research. Understand journal articles that report the use of factor analysis in test construction and instrument development. Create new data collection instruments. Examine the reliability and structure of existing health care instruments. Interpret and report computer-generated output from a factor analysis run. Making Sense of Factor Analysis: The Use of Factor Analysis for

Instrument Development in Health Care Research offers a practical method for developing tests, validating instruments, and reporting outcomes through the use of factor analysis. To facilitate learning, the authors provide concrete testing examples, three appendices of additional information, and a glossary of key terms. Ideal for graduate level nursing students, this book is also an invaluable resource for health care researchers.

This book presents innovative instructional interventions designed to support inquiry project-based learning as an approach to equip students with

21st century skills. Instructional techniques include collaborative team-based teaching, social constructivist game design and game play, and productive uses of social media such as wikis and other online communication affordances. The book will be of interest to researchers seeking a summary of recent empirical studies in the inquiry project-based learning domain that employ new technologies as constructive media for student synthesis and creation. The book also bridges the gap between empirical works and a range of national- and international-level educational standards frameworks such as the P21, the OECD framework, AASL

Standards for the 21st Century Learner, and the Common Core State Standards in the US. Of particular interest to education practitioners, the book offers detailed descriptions of inquiry project-based learning interventions that can be directly reproduced in today's schools. Further, the book provides research-driven guidelines for the evaluation of student inquiry project-based learning. Lastly, it offers education policymakers insight into establishing anchors and spaces for applying inquiry project-based learning opportunities for youth today in the context of existing and current education reform efforts. The aim of this book is to support education leaders',

practitioners' and researchers' efforts in advancing inspiring and motivating student learning through transformative social constructivist inquiry-based knowledge-building with information technologies. We propose that preparing students with inquiry mindsets and dispositions can promote greater agency, critical thinking and resourcefulness, qualities needed for addressing the complex societal challenges they may face.

This timely volume brings together a range of international scholars to analyse cultural, political, and

individual factors which contribute to the continued global issue of female underrepresentation in STEM study and careers. Offering a comparative approach to examining gender equity in STEM fields across countries including the UK, Germany, the United States, Hong Kong, Taiwan, South Africa, and China, the volume provides a thematic breakdown of institutional trends and national policies that have successfully improved gender equity in STEM at institutions of higher education. Offering case studies that demonstrate how policies interact with changing social and cultural norms, and impact women's choices and

experiences in relation to the uptake and continuation of STEM study at the undergraduate level, the volume highlights new directions for research and policy to promote gender equity in STEM at school, university, and career levels. Contributing to the United Nations' (UN) 2030 Agenda for Sustainable Development, this text will benefit researchers, academics, and educators with an interest in science education, higher education, and gender equity in STEM fields. The text will also support further discussion and reflection around multicultural education, educational policy and politics, and the sociology of

education more broadly.

This insightful book provides a comprehensive survey of urban development in Hong Kong since 1841. Pui-yin Ho explores the ways in which the social, economic and political environments of different eras have influenced the city's development. From colonial governance, wartime experiences, high density development and adjustments before and after 1997 through contemporary challenges, this book explores forward-looking ideas that urban planning can offer to lead the city in the future. Evaluating the relationship

between town planning and social change, this book looks at how a local Hong Kong identity emerged in the face of conflict and compromise between Chinese and European cultures. In doing so, it brings a fresh perspective to urban research, providing historical context and direction for the future development of the city. Hong Kong's urban development experience offers not only a model for other Chinese cities but also a better understanding of Asian cities more broadly. Urban studies scholars will find this an exemplary case study of a developing urban landscape. Town planners and architects will also benefit from reading this comprehensive book as it shows how Hong

Kong can be taken to the next stage of urban development and modernisation.

Each chapter in the book is firmly rooted in research and is well referenced as one would expect of such a book. It will be of particular use to people with an academic interest in this aspect of school management but will also be thought-provoking for those who are involved in the development of the curriculum within their institution - escalate

This book explores many of the new aspects of the core business of schools and colleges, that is, the curriculum. Keeping the focus clearly on learning and teaching,

the contributors explore the practical issues for managers at institutional level, within the context of their need to understand and analyze key educational values and principles. Part One presents overviews of theories and models of curriculum, while Part Two examines how these are applied through planning, monitoring and evaluating. Part Three explores in detail the various managerial roles within schools and colleges from leaders to those responsible for cross-curriculum work and special educational needs. The fourth part discusses the importance of effectively managing resources for the curriculum - the

environment, support staff and finance. Contributors use empirical research evidence to analyze current curriculum trends whilst proposing various new models which are likely to emerge in the 21st century.

Play provides young children with the opportunity to express their ideas, symbolize, and test their knowledge of the world. It provides the basis for inquiry in literacy, science, social studies, mathematics, art, music, and movement. Through play, young children become active learners engaged in explorations about themselves, their community, and their

personal-social world. An Integrated Play-Based Curriculum for Young Children offers the theoretical framework for understanding the origins of an early childhood play-based curriculum and how young children learn and understand concepts in a social and physical environment.

Distinguished author Olivia N. Saracho then explores how play fits into various curriculum areas in order to help teachers develop their early childhood curriculum using developmentally and culturally appropriate practice. Through this integrated approach, young children are able to actively engage in meaningful and functional experiences in their natural context.

Special Features Include: Vignettes of children's conversations and actions in the classroom Suggestions for activities and classroom materials Practical examples and guidelines End-of-chapter summaries to enhance and extend the reader's understanding of young children By presenting appropriate theoretical practices for designing and implementing a play-based curriculum, *An Integrated Play-Based Curriculum for Young Children* offers pre-service teachers the foundational knowledge about the field, about the work that practitioners do with young children, and how to best assume a teacher's role effectively.

 Drama Techniques in Language Learning offers a large selection of techniques for use at all levels which focus learners' attention on communicative tasks or activities. These involve the whole personality of the learner and provide real reasons for expressing feelings and opinions. The techniques require no special training and can easily be introduced into normal course work. This greatly expanded highly successful edition provides: advice on using the techniques in the classroom; 150 ideas for interesting and productive fluency

practice; clear instructions for the teacher; and detailed cross-referencing between exercises.

There has been growing interest in recent years in the influence of tests on teaching and learning - a phenomenon commonly referred to as 'washback'. Despite persistent assertions about its nature and scope, empirical studies investigating test washback are still limited in number, and few of these make use of both qualitative and quantitative methods in washback research. This volume presents a study of how the introduction of the 1996 Hong Kong Certificate of Education in English - a high

stakes public examination - impacted on classroom teaching and learning in Hong Kong secondary schools. The washback effect was observed initially at the larger 'macro' level, among different stakeholder groups within the Hong Kong educational context; and also at the more local 'micro' level, in terms of teachers' attitudes, teaching content and classroom interactions. This study: provides a theoretical background to the washback concept, discusses the need for empirical investigation of washback, describes the use of a mixed methodology approach in washback research, offers insights into the role of tests as agents of innovation and

change in the classroom and broader educational context. This volume will be of particular relevance to language test developers and researchers interested in the consequential validity of tests; it will also be of interest to teachers, curriculum designers, policymakers and others in education concerned with the interface between language testing and teaching practices/programs. This text shows specifically and realistically how technology and media enhance and support everyday teaching and learning. Written from the viewpoint of the teacher, it demonstrates how to integrate a complete range of technology and media formats into classroom instruction using the ASSURE model for lesson planning. Ideal for educators at all levels who place a high value on learning, the book is helps readers incorporate technology and media into best practice, to use them as teaching tools and to guide students in

using them as learning tools. Examples come from elementary and secondary education. The new Eleventh Edition keeps readers up to pace with the innovations in all aspects of technology, particularly those related to computers, Web 2.0, social networks, and the Internet. The updating throughout reflects the acceleration trend toward digitizing information and school use of telecommunications resources, such as the Web. It also addresses the interaction among the roles of teachers, technology, coordinators, and school media specialists, all complementary and interdependent teams within the school. This

text provides the ideal teaching and learning experience through: The ASSURE Model of lesson planning and the ASSURE Classroom Case Studies. A number of helpful pedagogical aids that provide reinforcement and ensure understanding. A focus on today's most up-to-date expectations and innovations.

This book demonstrates the value of approaching education from a sociological and philosophical perspective. Specifically, it addresses current and

long-standing educational issues in the Asia-Pacific region, integrating sociological and philosophical insights with practical applications in four key areas: educational aims, moral education, educational policy, and the East-West dichotomy. It discusses educational aims in terms of rationality, philosophical thinking, and sustainable development and presents the literary, religious, and analytical approaches to moral education.

Four educational policies are then considered: Hong Kong's language policy, Hong Kong's policy on the internationalization of education, East Asia's policies on English education, and Australia's policy on

teacher education. Different aspects of the East-West dichotomy are analysed: Confucian rationalism versus Western rationalism, Confucian learning culture versus Western learning culture, and Asian research methodology versus Western research methodology. Taken as a whole, the book shows that issues in education are rarely simple, and looking at them from multiple perspectives allows for rich and informed debates. It presents a rare philosophical and sociological analysis of the cultures and experiences of education in the Asia-Pacific region, and promotes research that leads to more culturally rooted educational policies and practice.

This edited volume sets the stage for discussion on Education 4.0, with a focus on applied degree education and the future of work. Education 4.0 refers to the shifts in the education sector in response to Industry 4.0 where digital transformation is impacting the ways in which the world of work and our everyday lives are becoming increasingly automated. In the applied degree sector, significant change and transformation is occurring as leaders, educators and partners evolve smart campus environments to include blended learning, artificial intelligence, data analytics, BYOD

devices, process automation and engage in curriculum renewal for and with industries and professions. This volume aims to profile and enhance the contribution of applied educational practice and research particularly in the applied degree sector and includes contributions that show case real world outcomes with students and industry as partners. This edited volume includes a wide range of topics, such as rethinking the role of education and educators; curriculum and the future of work; industrial partnership, collaboration and work integrated learning; vocational and professional practices; students, industry and professions as

partners; employability skills and qualities for the 21st century world of work; innovative pedagogy and instructional design; adaptive learning technologies; and data analytics, assessment and feedback. The contributors come from different parts of the world in higher education, including, Canada, China, Finland, Germany, Hong Kong, Italy, Macau, Singapore and the United Kingdom.

The Curriculum Management Audit

Edward Elgar Publishing

Students today have always had technology in their lives, so many

teachers assume their students are competent tech users — more competent, in fact, than themselves. In reality, not all students are as tech savvy as teachers might assume, and not all teachers are as incompetent as they fear. Even when students are comfortable using technology, they may not be using it appropriately.

Likewise, educators of all skill levels may not understand how to use technology effectively. Both students and teachers need to become members of a digital citizenry. In this essential exploration of digital citizenship, Mike Ribble provides a framework for asking what we should be doing with respect to technology so we can become productive and responsible users of digital technologies.
