Density Functional Theory Haynes Manuals N. America, Incorporated

Demonstrates how anyone in math, science, and engineering can master DFT calculations Density functional theory (DFT) is one of the most frequently used computational tools for studying and predicting the properties of isolated molecules, bulk solids, and material interfaces, including surfaces. Although the theoretical underpinnings of DFT are quite complicated, this book demonstrates that the basic concepts underlying the calculations are simple enough to be understood by anyone with a background in chemistry, physics, engineering, or mathematics. The authors show how the widespread availability of powerful DFT codes makes it possible for students and researchers to apply this important computational technique to a broad range of fundamental and applied problems. Density Functional Theory: A Practical Introduction offers a concise, easy-to-follow introduction to the key concepts and practical applications of DFT, focusing on plane-wave DFT. The authors have many years of experience introducing DFT to students from a variety of backgrounds. The book therefore offers several features that have proven to be helpful in enabling students to master the subject, including: Problem sets in each chapter that give readers the opportunity to test their knowledge by performing their own calculations Worked examples that demonstrate how DFT calculations are used to solve real-world problems Further readings listed in each chapter enabling readers to investigate specific topics in greater depth This text is written at a level suitable for individuals from a variety of scientific, mathematical, and engineering backgrounds. No previous experience working with DFT calculations is needed.

In the wake of the demise of the MG Midget and MGB, there seemed little prospect for the MG badge beyond being used as a kind of 'GTi' badge for various Austins and Rovers. However, thanks to the determination of a few people - and an enduring affection in public hearts - the tale has had a happier ending. This

is the story of that journey - from desolation to rebirth, just like the phoenix from which the project that created the MGF took its name. This book includes deeply researched text, detailed specifications and other data, and over 300 illustrations, mostly in full color.

These papers cover advances on several aspects of the wide field of Robotics as concerning Theory and Practice of Robots and Manipulators. ROMANSY 2016 is the 21st event in a series that started in 1973 as one of the first conference activities in the world on Robotics. The first event was held at CISM (International Centre for Mechanical Science) in Udine, Italy on 5-8 September 1973. It was also the first topic conference of IFTToMM (International Federation for the Promotion of Mechanism and Machine Science) and it was directed not only to the IFTToMM community.

This collection of essays grew out of the "Reading Stephen King Conference" held at the University of Maine in 1996. Stephen King's books have become a lightning rod for the tensions around issues of including "mass market" popular literature in middle and high school English classes and of who chooses what students read. King's fiction is among the most popular of "pop" literature, and among the most controversial. These essays spotlight the ways in which King's work intersects with the themes of the literary canon and its construction and maintenance, censorship in public schools, and the need for adolescent readers to be able to choose books in school reading programs. The essays and their authors are: (1) "Reading Stephen King: An Ethnography of an Event" (Brenda Miller Power); (2) "I Want to Be Typhoid Stevie" (Stephen King); (3) "King and Controversy in Classrooms: A Conversation between Teachers and Students" (Kelly Chandler and others); (4) "Of Cornflakes, Hot Dogs, Cabbages, and King" (Jeffrey D. Wilhelm); (5) "The 'Wanna Read' Workshop: Reading for Love" (Kimberly Hill Campbell); (6) "When 'IT' Comes to the Classroom" (Ruth Shagoury Hubbard); (7) "If Students Own Their Learning, What Do Teachers Do?" (Curt Dudley-Marling); (8) "Disrupting Stephen King: Engaging in Alternative Reading Practices" (James Albright and Roberta F. Hammett); (9) "Because Stories Matter: Authorial Reading and the Threat of Censorship" (Michael W. Smith); (10) "Canon Construction Ahead" (Kelly Chandler); (11) "King in the Classroom" (Michael R. Collings); (12) "King's Works and the At-Risk Student: The Broad-Based Appeal of a Canon Basher" (John Skretta); (13) "Reading the Cool Stuff: Students Respond to 'Pet Sematary'" (Mark A. Fabrizi); (14) "When Reading Horror Subliterature Isn't So Horrible" (Janice V. Kristo and Rosemary A. Bamford); (15) "One Book Can Hurt You...But a Thousand Never Will" (Janet S. Allen); (16) "In the Case of King: What May Follow" (Anne E. Pooler and Constance M. Perry); and (17) "Be Prepared: Developing a Censorship Policy for the Electronic Age" (Abigail C. Garthwait). Appended are a joint manifesto by National Council of Teachers of English (NCTE) and International Reading Association (IRA) concerning intellectual freedom; an excerpt from a teacher's guide to selected horror

short stories of Stephen King; and the conference program.

First shown as the TT coupe concept at the 1995 Frankfurt Motor Show and then soon afterward as the TT convertible at the Tokyo Motor Show, the cars heralded a new design language from Audi - the Bauhaus style from the 1930s that looked a little brutal at first, but has proven to have a long and successful production life. It finally arrived on the European market for the 1999 model year, with America following a little later. Senior Audi models, the A4, A6, and A8, have their engine and transmission sited longitudinally in the car, but the TT was based on the smaller A3 platform, which meant that the mechanical components were sited transversely. After a slow start, sales picked up and have remained strong ever since. The media loved the Audi TT and continued to write glowing reports about it even though it was six years old in the marketplace, outlasting the Mercedes-Benz SLK, BMW Z3, and Porsche Boxster by quite some time.
