The preeminent doctor
and bioethicist, Ezekiel
Emanuel, gives an incisive

tour of ten health care
systems across the globe,
including our own, in
search of an answer to
whose is best --- and how
we can be more like them.
One thing we can all
agree on: America does
not have the world's best
healthcare, at least not
for all its citizens across
50 very different states.
But which country does,

and what can they teach
us? Author, physician, and
bioethicist, Ezekiel
Emanuel has examined
the world's leading
providers of healthcare .
Drawing from an analysis
of the U.S. and ten other
countries --- Australia,
Canada, China, France,
Germany, Netherlands,
Norway, Switzerland,
Taiwan, and the UK. ---

the results are in. No health care system is perfect, whether the problem is too many hospital beds in Germany or treating chronic illness in France, and some problems are shared across many countries, from truly addressing mental healthcare to containing the rising costs of chronic care. But the lessons from the best healthcare practices allow us to adapt some of the good found in other countries and avoid making the same mistakes as others.

Healthcare remains uniquely important to all Americans, and uniquely fraught: here is the best evidence from around the world of what excellence looks like and how we can deliver it here.

How the Affordable Care Act will Improve our Terribly Complex, Blatantly Unjust, Outrageously Expensive, Grossly Inefficient, Error Prone System Random House

The hidden history of African uranium and what it means—for a state, an object, an industry, a

workplace—to be “nuclear.” Uranium from Africa has long been a major source of fuel for nuclear power and atomic weapons, including the bomb dropped on Hiroshima. In 2003, after the infamous “yellow cake from Niger,” Africa suddenly became notorious as a source of uranium, a component of nuclear weapons. But did that admit Niger, or any of Africa's other uranium-producing countries, to the select society of nuclear states? Does uranium itself count as a

nuclear thing? In this book, Gabrielle Hecht lucidly probes the question of what it means for something—a state, an object, an industry, a workplace—to be “nuclear.” Hecht shows that questions about being nuclear—a state that she calls “nuclearity”—lie at the heart of today’s global nuclear order and the relationships between “developing nations” (often former colonies) and “nuclear powers” (often former colonizers). Hecht enters African

nuclear worlds, focusing on miners and the occupational hazard of radiation exposure. Could a mine be a nuclear workplace if (as in some South African mines) its radiation levels went undetected and unmeasured? With this book, Hecht is the first to put Africa in the nuclear world, and the nuclear world in Africa. By doing so, she remakes our understanding of the nuclear age.

A Simple, Secure Solution for America
Princeton University Press

Edited by four leading members of the new generation of medical and healthcare ethicists working in the UK, respected worldwide for their work in medical ethics, *Principles of Health Care Ethics, Second Edition* is a standard resource for students, professionals, and academics wishing to understand current and future issues in healthcare ethics. With a distinguished international panel of contributors working at the leading edge of academia,

this volume presents a comprehensive guide to the field, with state of the art introductions to the wide range of topics in modern healthcare ethics, from consent to human rights, from utilitarianism to feminism, from the doctor-patient relationship to xenotransplantation. This volume is the Second Edition of the highly successful work edited by Professor Raanan Gillon, Emeritus Professor of Medical Ethics at Imperial College London and former editor of the *Journal of Medical Ethics*,

the leading journal in this field. Developments from the First Edition include: The focus on 'Four Principles Method' is relaxed to cover more different methods in health care ethics. More material on new medical technologies is included, the coverage of issues on the doctor/patient relationship is expanded, and material on ethics and public health is brought together into a new section. *Priced Out* Harvard University Press Emanuel (oncology and

medical ethics, Harvard) rejects the argument that recent issues of medical ethics are the result of new technologies, and contends that they are an inevitable consequence of liberal political values. He proposes a communitarian solution. Annotation copyrighted by Book News, Inc., Portland, OR

 This book provides an extensive review of what innovation means in healthcare, with real-life examples and guidance

on how to successfully innovate with IT in healthcare.

Money, Politics, Backroom Deals, and the Fight to Fix Our Broken Healthcare System Oxford University Press

This companion book to the HBO Documentary Films series explores the cutting-edge research on Alzheimer's disease that is creating new hope for the future. Alzheimer's disease is the second most-feared illness in America, following cancer. It affects as many as 5

million Americans, a number that could soar to 16 million by 2050. It is estimated that, unless effective preventions are discovered, 10 million baby boomers will eventually develop this irreversible and devastating brain disorder. Until recently, medical news on Alzheimer's disease was not comforting. But in the past few years, advances in many scientific areas—from diagnostic imaging to genetic analysis—have led to an explosion of knowledge

with implications for treatment and prevention. This is an exciting time of discovery in Alzheimer's research. Through The Alzheimer's Project film series, HBO Documentary Films illuminates the vital breakthroughs occurring in the field. One of the central films in this series, Momentum in Science, brings us inside the laboratories and clinics of the nation's top scientists and physicians who are clearing the path to a deeper understanding of Alzheimer's disease. By capturing the exhilaration

of these scientists and casting light on their groundbreaking discoveries, the film seeks to bring a wider understanding of the disease and new hope for future treatment. This book offers an even closer look at the advances of this scientific frontier. It investigates the complex cascade of events that occurs inside the brain when someone has Alzheimer's disease and shows how scientists are working to interrupt this process and ultimately prevent the disease. In

accessible prose, it examines specific evidence of momentous progress, from the triumphant discovery of the unique role of the beta-amyloid and tau proteins, to the use of PET scans to track changes in the brain and the analyses of cerebrospinal fluid to identify biomarkers that will help us predict who will develop the disease in the future. It also looks at current drug development and at what we can do as individuals to potentially reduce our risk of

developing the disease. *The Alzheimer's Project: Momentum in Science* is a fascinating story of scientific discovery that shows what recent breakthroughs might mean for improving our chances of remaining cognitively vital throughout a long life. *Healthcare, Guaranteed* Public Affairs
The U.S. health care system is in crisis. At stake are the quality of care for millions of Americans and the financial well-being of individuals and employers

squeezed by skyrocketing premiums—not to mention the stability of state and federal government budgets. In *Redefining Health Care*, internationally renowned strategy expert Michael Porter and innovation expert Elizabeth Teisberg reveal the underlying—and largely overlooked—causes of the problem, and provide a powerful prescription for change. The authors argue that competition currently takes place at the wrong level—among health plans, networks,

and hospitals—rather than where it matters most, in the diagnosis, treatment, and prevention of specific health conditions. Participants in the system accumulate bargaining power and shift costs in a zero-sum competition, rather than creating value for patients. Based on an exhaustive study of the U.S. health care system, *Redefining Health Care* lays out a breakthrough framework for redefining the way competition in health care delivery takes place—and unleashing stunning improvements in

quality and efficiency. With specific recommendations for hospitals, doctors, health plans, employers, and policy makers, this book shows how to move health care toward positive-sum competition that delivers lasting benefits for all. *Health Care Reform* John Wiley & Sons
Global health is at a crossroads. The 2030 Agenda for Sustainable Development has come with ambitious targets for health and health services worldwide. To reach these

targets, many more billions of dollars need to be spent on health. However, development assistance for health has plateaued and domestic funding on health in most countries is growing at rates too low to close the financing gap. National and international decision-makers face tough choices about how scarce health care resources should be spent. Should additional funds be spent on primary prevention of stroke, treating childhood cancer, or expanding treatment

for HIV/AIDS? Should health coverage decisions take into account the effects of illness on productivity, household finances, and children's educational attainment, or just focus on health outcomes? Does age matter for priority setting or should it be ignored? Are health gains far in the future less important than gains in the present? Should higher priority be given to people who are sicker or poorer? Global Health Priority-Setting provides a framework for how to think about

evidence-based priority-setting in health. Over 18 chapters, ethicists, philosophers, economists, policy-makers, and clinicians from around the world assess the state of current practice in national and global priority setting, describe new tools and methodologies to address establishing global health priorities, and tackle the most important ethical questions that decision-makers must consider in allocating health resources.

Ethical Issues in
International Biomedical
Research is the definitive
book on the ethics of
research involving human
subjects in developing
countries. Using 21 actual
case studies, it covers the
most controversial topics,
including the ethics of
placebo research in
Africa, what benefits
should be provided to the
community after
completion of a research
trial, how to address
conflicts between IRBs in
developed and developing

countries, and undue
inducement of poor
people in developing
countries. Each case is
accompanied by two
expert commentaries,
written by many of the
worlds leading experts in
bioethics as well as new
voices with research
experience in developing
countries. No other
volume has this scope.
Students in bioethics,
public and international
health, and ethics will find
this book particularly
useful.

Drug Deal, Peter Kolchinsky offers clear-eyed analysis, compelling stories, and vital ideas for closing loopholes, dealing with bad actors, supporting patients, and fueling discoveries that ease suffering now and for generations to come. This May Hurt a Bit Da Capo Lifelong Books Delivering Health Care in America, Sixth Edition is the most current and comprehensive overview of the basic structures and operations of the U.S. health system—from its historical origins and

resources, to its individual services, cost, and quality. Using a unique “systems” approach, the text brings together an extraordinary breadth of information into a highly accessible, easy-to-read resource that clarifies the complexities of health care organization and finance while presenting a solid overview of how the various components fit together. While the book maintains its basic structure and layout, the Sixth Edition is nonetheless the most substantive revision ever

of this unique text. Because of its far-reaching scope, different aspects of the Affordable Care Act (ACA) are woven throughout all 14 chapters. The reader will find a gradual unfolding of this complex and cumbersome law so it can be slowly digested. Additionally, as U.S. health care can no longer remain isolated from globalization, the authors have added new global perspectives, which the readers will encounter in several chapters. Key Features: -

Comprehensive coverage of the ACA and its impact on each aspect of the U.S. health care system woven throughout the book - New “ACA Takeaway” section in each chapter as well as a new Topical Reference Guide to the ACA at the front of the book - Updated tables and figures, current research findings, data from the 2010 census, updates on Healthy People 2020, and more - Detailed coverage of the U.S. health care system in straightforward, reader-friendly language that is appropriate for

graduate and undergraduate courses alike

NATIONAL BESTSELLER
For years, people have been asking Ezekiel “Zeke” Emanuel, the brash, outspoken, and fiercely loyal eldest brother in the Emanuel clan, the same question: What did your mom put in the cereal? Middle brother Rahm is the mayor of Chicago, erstwhile White House chief of staff, and one of the most colorful

figures in American politics. Youngest brother Ari is a Hollywood superagent, the real-life model for the character of Ari Gold on the hit series *Entourage*. And Zeke himself, whom the other brothers consider to be the smartest of them all, is one of the world’s leading bioethicists and oncologists, and a former special advisor for health policy in the Obama administration. How did one family of modest means produce three such high-achieving kids? Here, for the first time,

Zeke provides the answer. Set amid the tumult of Chicago in the 1960s and 1970s, *Brothers Emanuel* recounts the intertwined histories of these three rambunctious, hypercompetitive Jewish American boys, each with his own unique and compelling life story. But ultimately, this is the story of the entire Emanuel family: the tough, colorful Old World grandparents; a mischievous, loving father who immigrated to the United States with twenty-five dollars and who

enthralled his boys with tales of his adventures in Israel's war for independence; and a proud, politically engaged mother who took the boys with her to rallies and protests—including a civil rights march through the streets of Chicago led by Martin Luther King himself. Even as the Emanuels distinguished themselves as individuals, the bond of brotherhood that tied them together was never broken. *Brothers Emanuel* is a wry, rollicking, and often poignant narrative of how

one American family succeeded in raising three extraordinary children. Praise for *Brothers Emanuel* “An endearing, honest and gripping account of an American success story.”—*San Francisco Chronicle* “A beautiful portrait of growing up Jewish in an urban environment during an era of profound social change.”—*Publishers Weekly* “This delightful memoir is a deeply personal tale of one family, but it's also about much larger things: America and tribal

identity, love and rivalry, and the moral lessons to be learned as you grow up.”—Walter Isaacson “Fascinating . . . a classic tale of an immigrant family.”—Chicago Tribune “Mighty entertaining.”—The Hollywood Reporter “A clear-eyed, candid memoir that is unique and yet quintessentially American.”—BookPage “A fun read.”—The Forward Get What's Yours for Medicare PublicAffairs The world's bestselling health guide offers new material on the most

recent critical health issues such as obesity, as well as additional new and updated information. Covering over 175 healthcare problems and symptoms, *Take Care of Yourself* is simple to use. Readers can look up their symptoms to locate an explanation of likely causes and possible home remedies, while diagrams show how to recognize problems and treat them, and decision charts advise when it's time to see a doctor. This comprehensive guide also covers emergencies, the

20 things everyone should keep in a home pharmacy, and how to work best with a doctor. *A Prescription for Action* Harvard Business Press A New York Times Bestseller, with an updated explanation of the 2010 Health Reform Bill “Important and powerful . . . a rich tour of health care around the world.” —Nicholas Kristof, The New York Times Bringing to bear his talent for explaining complex issues in a clear, engaging way, New York Times bestselling author T. R.

Reid visits industrialized democracies around the world--France, Britain, Germany, Japan, and beyond--to provide a revelatory tour of successful, affordable universal health care systems. Now updated with new statistics and a plain-English explanation of the 2010 health care reform bill, *The Healing of America* is required reading for all those hoping to understand the state of health care in our country, and around the world. T. R. Reid's latest book, *A Fine Mess: A*

Global Quest for a Simpler, Fairer, and More Efficient Tax System, is also available from Penguin Press. *A Global Quest for Better, Cheaper, and Fairer Health Care* Penguin
Some painful news: Canada no longer has the best health-care system in the world. How might we fix Canada's health-care system? Why would we want to? What's stopping us from doing so? These three questions lie at the heart of this in-depth exploration of one of the biggest political and

personal issues facing Canadians. *Skyvington* explains why change has to occur, in light of the implications of doing nothing, and describes how Canadians can and must get involved to save our health-care system. *This May Hurt a Bit* is meant to provide a blueprint for change once those in charge finally acknowledge the most inconvenient truth — namely, that Canada's health-care system is in poor health.
The Trillion Dollar Revolution Oxford

University Press, USA
China's struggle for the rule of law is at a critical juncture. As a key element of governance in the PRC today, China's legal system affects not only domestic affairs but also China's engagement with the world. But can a credible legal system emerge which protects the rights of citizens and international partners without undermining the power of the Party State? And is the Chinese Communist Party willing to embark on judicial reforms that may

jeopardize its very survival? Understanding the PRC legal system is increasingly important as China rises to prominence in the world. In this compelling analysis, noted legal scholar Pitman Potter examines the ideals and practices of China's legal regime, in light of international standards and local conditions. Against a rich historical backdrop, Potter explains how China's legal system supports three key policy objectives; namely, political stability, economic prosperity, and

social development. In exploring these competing policy goals and the tensions between them, he also raises fundamental questions about government expectations of the role of law in regulating local and international socio-economic and political relationships. This wide-ranging and readable introduction will be an invaluable guide for students and non-specialists interested in China's ongoing process of legal modernization. *Innovation with*

in Healthcare* Yale
University Press

The definitive story of American health care today -- its causes, consequences, and confusions. In March 2010, the Affordable Care Act was signed into law. It was the most extensive reform of America's health care system since at least the creation of Medicare in 1965, and maybe ever. The ACA was controversial and highly political, and the law faced legal challenges reaching all the way to

the Supreme Court; it even precipitated a government shutdown. It was a signature piece of legislation for President Obama's first term, and also a ball and chain for his second. Ezekiel J. Emanuel, a professor of medical ethics and health policy at the University of Pennsylvania who also served as a special adviser to the White House on health care reform, has written a brilliant diagnostic explanation of why health care in America has become such a divisive

social issue, how money and medicine have their own -- quite distinct -- American story, and why reform has bedeviled presidents of the left and right for more than one hundred years. Emanuel also explains exactly how the ACA reforms are reshaping the health care system now. He forecasts the future, identifying six mega trends in health that will determine the market for health care to 2020 and beyond. His predictions are bold, provocative, and uniquely well-informed. Health care

-- one of America's largest employment sectors, with an economy the size of the GDP of France -- has never had a more comprehensive or authoritative interpreter. *Beyond Cost-Effectiveness* PublicAffairs

"From a giant of health care policy, an engaging and enlightening account of why American health care is so expensive -- and why it doesn't have to be. Uwe Reinhardt was a towering figure and moral conscience of health care policy in the United States and beyond. Famously

bipartisan, he advised presidents and Congress on health reform and originated central features of the Affordable Care Act. In *Priced Out*, Reinhardt offers an engaging and enlightening account of today's U.S. health care system, explaining why it costs so much more and delivers so much less than the systems of every other advanced country, why this situation is morally indefensible, and how we might improve it. The problem, Reinhardt says, is not one of

economics but of social ethics. There is no American political consensus on a fundamental question other countries settled long ago: to what extent should we be our brothers' and sisters' keepers when it comes to health care? Drawing on the best evidence, he guides readers through the chaotic, secretive, and inefficient way America finances health care, and he offers a penetrating ethical analysis of recent reform proposals. At this point, he argues, the

United States appears to have three stark choices: the government can make the rich help pay for the health care of the poor, ration care by income, or control costs. Reinhardt proposes an alternative path: that by age 26 all Americans must choose either to join an insurance arrangement with community-rated premiums, or take a chance on being uninsured or relying on a health insurance market that charges premiums based on health status. An incisive look at the

American health care system, Priced Out dispels the confusion, ignorance, myths, and misinformation that hinder effective reform." -

The preeminent doctor and bioethicist Ezekiel Emanuel is repeatedly asked one question: Which country has the best healthcare? He set off to find an answer. The US spends more than any other nation, nearly \$4 trillion, on healthcare. Yet, for all that expense, the US is not ranked #1 -- not even close. In Which Country Has the World's Best Healthcare? Ezekiel Emanuel profiles eleven of the world's healthcare systems in pursuit of the best or at least where

excellence can be found. Using a unique comparative structure, the book allows healthcare professionals, patients, and policymakers alike to know which systems perform well, and why, and which face endemic problems. From Taiwan to Germany, Australia to Switzerland, the most inventive healthcare providers tackle a global set of challenges -- in pursuit of the best healthcare in the world.
