The Insider's Guide to Beijing 2005-2006 John Ostrowick

Islam, the religion of total submission to God, is the belief of more than one fifth of all human beings and is the second largest religion in the world. Despite its large number of followers, little was known about it in America until after the tragic event of September 11, 2001. Unfortunately, the media portrayed Islam negatively after September 11th and distorted its true nature. Hence, some people do not want to hear anything about Islam while many others began to ask many questions about it. An Insider's Guide to Islam is a practical guide that explains Islam as understood and practiced by Muslims of diverse background. To Muslims, Islam is a way of life and a religion of peace which brings tranquility and harmony to their lives. Islam is a rich culture and a unique tradition which must be understood on its own merits. The author brings insight into what Islam means, how it is

practiced and its relationship with other religions. He also analyzes the concept of Jihad, the role of women in Islam and the values that Islam cherishes. The development of Islam in America and the roles that Muslims play in the United States are also elaborated upon in this volume.

Lying Minds: An Insider's Guide to Alcoholism Alcoholics are not damaged, faulty or broken, and we aren't bad or weak people, we are deceived: deceived by our own minds. Most people that drink heavily in their youth will mature out of it and those that drink to relieve some distress will moderate their drinking if that distress is removed, but we do not. Our minds do not spontaneously curb excessive drinking, they do the opposite: they encourage it. Alcohol changes the way that we think, lowers our mood, and distorts our memory. Our minds compel us to drink more and we become progressively more anxious, depressed, fearful, alone and hopeless... all of which are relieved by drinking. Drinking seems to us that it brings relief from our problems whereas in fact it amplifies them, so we drink more. This is how our minds trap us into a self-reinforcing pursuit of alcohol, and that does not happen to most other people. We are not broken or faulty but we are different. All people are different in some way. Some are tall, some are short, but we also all have unseen differences within us. Some are bolder than others, some more timid, some artistic and some more analytical. But we have differences that make us susceptible to addiction, and once that susceptibility is engaged then it forms into an ever strengthening force that propels us towards our own destruction. This book explains how our minds become deceived by alcohol and how it changes our motivation, emotions, memory and thinking. If you want to understand the "why's" of alcoholism; why we have to have that first drink, why we can't stop at one, why we drink more often than we intend, why we keep drinking even though bad things happen, and why we can't drink like normal people, then this book will tell you. It explains why we can never safely drink again, and the deeper truth... that we never could in the first place.

Stem Cells: An Insider's Guide Macmillan

The notion that there is no alternative to capitalism emerged after the fall of the Berlin Wall and made rapid headway due to increasing economic globalisation. More recently, this belief that there is no viable alternative has held firm despite the financial crisis, high unemployment levels and an ever-increasing gap between rich and poor. However, since the appearance of Benjamin Ward's seminal 1958 article, economic theorists have been developing a workable alternative: a system of self-managed firms. The core argument outlined in this book is that a well-organised system of producer cooperatives would give rise to a new mode of production and, ultimately, a genuinely socialist society. This argument is developed through three key steps. First, following on from Jaroslav Vanek's definition, it is argued that a 'Labour-Managed Firm', a firm which strictly segregates capital incomes from labour incomes, would implement a new production mode because it would reverse the pre-existing relation between capital and labour. Second, given that a system of these 'Labour-Managed Firm' cooperatives would reverse the capital-labour relationship, it is suggested that this would constitute a form of market socialism. Third, it is argued that compared to capitalism a system of producer cooperatives offers a wealth of advantages, including the potential for efficiency gains, the eradication of unemployment and the end of exploitation. Ultimately, this book concludes that self-management could take the place of central planning in Marxist visions for the future.
