In all but the smallest of projects the project sponsor inevitably has to buy in the goods and services of other suppliers. This

requires people to make contracts so that they know the basis on which they are working with each other and to deal with any disagreements that subsequently arise. So a knowledge of contracting specifically for project management is essential if a project is to avoid difficulties and reach a successful conclusion. Introduction to Project Management Kirshner Publishing Company

In the past, an organization's technical methodologies were expected to fulfill project management process needs. However, they sometimes fell short of applying what is known today as "professional project management" concepts and practices. Written by one of the nation's most highly regarded project management mentors, *The Complete Project Management Methodology and Toolkit* delineates a "business-relevant" methodology that can be introduced across different industries and business environments. The book describes the ProjectPRISMTM Project Management Methodology, an innovative, matrix-based approach to conducting project management that introduces relevant concepts, practices, and tools in an effective project management solution. Aligned with common business practices, Gerard Hill's method demonstrates how to develop project plans, keep on schedule, manage budgets, maintain areas of responsibility, and evaluate a project's progress from concept to completion. The text also offers insight for customizing the methodology to meet the unique needs of individual organizations. Project management has emerged as a professional discipline and is coming into the mainstream just when it appears to be most needed in the

business environment. Demonstrating that project management, in many ways, is business management, the author provides an exceptional foundation for creating a fine-tuned project management practice and a relevant business solution for every organization.

This research identifies six research topics, based on the areas of project management expertise, to guide data collection and the research process. In the contribution to architecture, the research regards "building construction and engineering structures" as the application area of project management.
