In direct current (DC), the electric charge (current) only flows in one direction. Electric charge in alternating current (AC), on the other hand, changes direction periodically. The voltage in AC circuits also periodically reverses because the current changes direction. Alternating Current (AC) vs. Direct Current (DC) - learn ... Alternating current, AC is generally used for power distribution, which is why the mains sockets in our homes and at work provide an alternating current to power whatever is needed, but direct current, DC is more widely used for the electronics boards themselves and for many other

applications. Alternating & Direct Current | AC vs DC Electricity ... The power factor of the alternating current lies between zero to one, whereas the power factor of the direct current always remains one. The alternator current is generated by the alternator. The direct current is generated by the generator, battery and cells. The load of the alternating current is capacitive, inductive or resistive.
