PMBOK®, PRINCE2®, and Scrum are today's three most widely recognized project management standards. The most successful project managers know how to draw on all three, and often combine them to deliver their projects more effectively and efficiently. In *Mastering Principles and Practices in PMBOK, Prince2, and Scrum*, Jihane Roudias shows project managers how these methods complement each other, how to integrate them, and how to troubleshoot projects involving any or all of them. Roudias illuminates core project concepts, processes, and areas of knowledge in each methodology, guides you in synthesizing them, and reviews the types of difficulties you may encounter in each project

process. Drawing on extensive personal experience, Roudias also emphasizes the importance of project risk management, monitoring, and evaluation systems - and demonstrates how to use them to make timely and informed decisions at every stage of your project. For every project management practitioner and student pursuing PMBOK/PMI, PRINCE2, and/or Scrum certification, or seeking to use these methodologies together to achieve better project performance.

Prince2 Self Study for Certification & Project Management Routledge

Research Paper from the year 2009 in the subject Business economics - Business Management, Corporate Governance, grade: 68/100, language: English, abstract: Project Management in software development has become extremely complex due to the rapid business changes and technology updates.

Triggered by multiple project failures, this report describes adjustment for the existing project management processes followed by FTME to overcome contemporary challenges. FTME is an IT vendor based in Dubai providing IT solutions to multiple customers in the region. The problem identified is the predefined uncalculated constraints;

customers impose on vendors as the condition for the project to be awarded. The research drills down in 'Agile' standard process and PMI methodology to recommend appropriate changes in the existing internal processes that will assist in overcoming the constraints. It has analysis of multiple IT vendor experts on the same subject and interview feedback as qualitative analysis to further support the findings. The recommendations include redefining project success criteria to properly assess project failure attributes, appropriate project selection and existing process enhancement using 'Agile' process as a base.
