This book has been written specifically for candidates sitting the oral part of the FRCS (Tr & Orth) examination. It presents a selection of questions arising from common clinical scenarios along with detailed model answers. The emphasis is on current concepts, evidence-based medicine and major exam topics. Edited by the team behind the successful Candidate's Guide to the FRCS (Tr & Orth) Examination, the book is structured according to the four major sections of the examination; adult elective orthopaedics, trauma, children's/hands and upper limb and applied basic science. An introductory section gives general exam guidance and end section covers common diagrams that you may be asked to draw out. Each chapter is written by a recent (successful) examination candidate and the style of each reflects the author's experience and their opinions on the best tactics for first-time success. If you are facing the FRCS (Tr & Orth) you need this book.

This open access book focuses on Switzerland-based medium-sized companies with a longstanding export tradition and a proven dominance in global niche markets. Based upon in-depth documentation and analysis of 36 Swiss companies over their entire history, an expert team of authors presents several parallels in the pathways and success factors which allowed these firms to become dominant and operate from a high-cost location such as Switzerland. The book enhances these insights by providing detailed company profiles documenting the company history, development, and how their relevant global niche positions were reached. Readers will benefit from these profiles as they compile a diverse selection of industries, mainly active within the B2B sector, with mostly mature companies (60 years to older than 100 years since founding) and different types of ownership structures including family firms. 'Masterpieces of Swiss Entrepreneurship' brings unique learning opportunities to owners and leaders of SMEs in Switzerland and elsewhere. Findings are based on detailed bottom-up research of 36 companies -- without any preconceived notions. The book is both conceptual and practical. It fosters understanding for different choices in development pathways and management practices. Matti Alahuhta, Chairman DevCo Partners, ex-CEO Kone, Board member of several global listed companies, Helsinki, Finland Start-up entrepreneurs need proven models from industry which demonstrate the various paths to success. "Masterpieces of Swiss Entrepreneurship" provides deep insights highlighting these models and the important trade-offs entrepreneurial teams must consider when choosing the path of high growth or of maximum control, as they are often mutually exclusive. Acetabular fractures in older adults are increasing in frequency and present unique challenges to the surgeons charged with their treatment. This text provides the clinician tools for deciding who is an operative candidate and reviews in detail the various surgical treatments available for management. Opening chapters discuss the scope of the problem, the functional status of older patients and the risks involved with any surgical approach. After a chapter discussing non-operative approaches to acetabular fractures, the remaining chapters present the various surgical techniques and include a critical assessment of the outcomes of these treatment choices. ORIF techniques for posterior and anterior wall and column fractures are followed by percutaneous treatment and total hip arthroplasty, both alone and in combination with ORIF. Presenting the most current strategies for these increasingly common injuries, Acetabular Fractures in Older Patients is an excellent resource for all orthopedic and trauma surgeons.

Quality reporting is a rapidly growing area. Each year, new regulations in the US from the Council of Medicare and Medicaid Services make quality reporting a larger factor in determining reimbursement practices. Quality metrics are common parts of European clinical practice. Value of care is a focus of all payers, with specific interest directed at assessing the quality of care provided by a given healthcare team. While there are many publications in this space, no text has sought to provide an overview of quality in spine care. Quality measurement and quality reporting are ever growing aspects of the healthcare environment. Quality assessment is valuable to all healthcare stakeholders: patients, physicians, facilities, and payers. Patients are drawn to facilities that provide high value care; public reporting systems and grading systems for hospitals offer one opinion with regard to "high quality care." Most physicians email inboxes are inundated with offers of recognition for being a "Top Doc" for a nominal fee. Some payers offer incentives to patients who chose to be treated at "Centers of Excellence" or similar facilities; the definition of "Excellence" may be unclear. There is little consensus on how to measure quality, how to incorporate patient and procedure factors and achieve accurate risk adjustment, and how to define value of care. Regardless of these challenges, regulatory efforts in the US, as well as numerous international efforts, make quality assessment and quality reporting an important part of physician behaviour. Physician and facility reimbursement for procedures are often tied to quality metrics. Spine procedures are costly, elective, and are a focus of many payer-based programs. Hence, spine care is often a focus of quality reporting efforts. This text summarizes the state of the art with regard to quality measurement, reporting, and value assessment in spine care. We will review quality reporting in the US and internationally. Chapters will outline how quality improvement efforts have achieved success in hospital systems. The reader will be provided with insights in how to achieve success incorporating quality metrics into spine care. Features: 1. Illustrates the state of the art in spine quality reporting: There is no text that thoroughly addresses quality assessment and quality reporting in spine care; there are, however, numerous articles in this space. This book provides a definitive text covering the state of the art for quality reporting in spine care and will be of value to the international orthopedic and neurosurgical spine community. 2. Provides insight on quality reporting in different healthcare systems: The text will allow for comparison of different quality reporting systems from different health care systems. This will provide practitioners with insight into the strengths and weaknesses of different approaches to quality reporting, and may drive improvement in quality assessment and reporting systems. A single text that features review of US, European, and Australia/Asian health care systems' quality reporting is novel and will be thought provoking for readers. 3. Describes the US and international Healthcare reimbursement systems: Practicing physicians are provided with little information and less insight into the vagaries of the US and other healthcare systems. The text will provide insight into code development, valuation, and

how quality reporting affects physician reimbursement 4. Explains risk adjustment: Appropriate risk adjustment and assessing patient and procedure factors that may impact quality reporting are invaluable to accurate quality measurement. The text will review risk adjustment, different approaches to risk assessment/mitigation, and provide physicians with insights into appropriate measures to capture in their clinical practices 5. Provides a foundation for improved quality assessment in spine care: While there are many disparate elements and differing approaches to capturing spine quality metrics, no definitive text has attempted to summarize these efforts in a single volume. By synthesizing these variable approaches, the reader may be provided with insights into superior approaches to quality assessment and a foundation will be provided for improving healthcare systems.

This book collects the articles published in the Special Issue "Polymeric Materials: Surfaces, Interfaces and Bioapplications". It shows the advances in polymeric materials, which have tremendous applications in agricultural films, food packaging, dental restoration, antimicrobial systems, and tissue engineering. These polymeric materials are presented as films, coatings, particles, fibers, hydrogels, or networks. The potential to modify and modulate their surfaces or their content by different techniques, such as click chemistry, ozonation, breath figures, wrinkle formation, or electrospray, are also explained, taking into account the relationship between the structure and properties in the final application. Moreover, new trends in the development of such materials are presented, using more environmental friendly and safe methods, which, at the same time, have a high impact on our society.

In recent years the approach towards rib fractures has evolved. Abandoned in the past, due to inadequate instrumentation and lack of evidence, rib fixation has recently re-emerged as a treatment option for trauma patients. There have been a number of advances over the last 25 years that now allow surgeons to internally fix rib fractures that otherwise may have not had other

options. However, as a result there has been a rapid increase in literature and many institutions interested in initiating rib fixation programs. Due to a variety of practitioners involved namely, trauma surgeons, orthopedic surgeons, and thoracic surgeons there has been no comprehensive guide to patient selection, technique, and post-operative care. The purpose of this text is to fill the educational gap for those trauma, orthopedic, and thoracic surgeons interested in learning the cutting edge evidence-based approaches to treatment of rib fractures. This topic has caught the interest of many and has been a recurrent theme at surgical meetings over the last two years. Although there has been ever increasing levels of interest and experience nationally there are many questions which remain. This text will provide not only the theoretical background for improving outcomes in those with rib fractures but also serve as a practical guide to those interested in starting new programs. The text will include tips and tricks that can be used in the OR or at the bedside to improve patient care. Therefore, the focus will be on a comprehensive review but also including tips and tricks from the most experienced surgeons around the country who are performing internal fixation for rib fractures.

This book outlines the effects that technology-induced change will have on sport within the next five to ten years, and provides food for thought concerning what lies further ahead. Presented as a collection of essays, the authors are leading academics from renowned institutions such as Massachusetts Institute of Technology, Queensland University of Technology, and the University of Cambridge, and practitioners with extensive technological expertise. In their essays, the authors examine the impacts of emerging technologies like artificial intelligence, the Internet of Things, and robotics on sports and assess how they will change sport itself, consumer behavior, and existing business models. The book will help athletes, entrepreneurs, and innovators working in the sports industry to spot trendsetting technologies, gain deeper insights into how they will affect their activities, and identify the most effective responses to stay ahead of the competition both on and off the pitch.

The introduction of total joint arthroplasty throughout the world has contributed manifold benefits to patients who suffer from joint diseases. Concurrently, however, there has been an increase in revision surgery. Many orthopedic surgeons agree that durability of prostheses is an eternal problem. In particular, periprosthetic osteolysis recently has been identified as one of the serious problems affecting prosthetic durability. To improve durability, osteolysis and many other problems must be investigated and solved both experimentally and clinically with respect to such aspects as prosthetic material, design, and biological and biomechanical behavior. This book comprises 37 papers that were presented by orthopedic surgeons and biomedical engineers at the 28th Annual Meeting of the Japanese Society for Replacement Arthroplasty, held in March 1998 in Kanazawa, Japan. The volume is thus a compilation of the latest knowledge about the pathogenesis and reduction of osteolysis and wear, newly developed total hip prostheses, and other current topics of total knee arthroplasty. We earnestly hope that this book will be of benefit to clinicians and researchers, and that it will contribute to the creation of more durable total joint prostheses in the future. This book details the current status of cervical MISS for expert surgeons, young surgeons or clinicians, and residents and fellows with little or no experience on this field of surgery. Because of the involvement of different and highly trained specialists from all over the world, the aim of this book is to satisfy the requirements for knowing the most advanced surgical techniques and their application. Also included are the indications and surgical techniques involving an open standard approach, giving a most exhaustive knowledge of the cervical spine surgery. Due to the difficulty of finding books with both minimal invasive cervical spine surgery and more conventional standard "open" surgery, the benefit of this book is to permit the surgeons and residents and medical doctors, to have a more complete and immediate knowledge of the topics. Due to the scientific multidisciplinary nature of the MISS, several professionals such as orthopedic surgeons, neurosurgeons, radiologists, anesthesiologists and pain management specialists, have been involved in order to create a book in which all the aspects of MISS have been treated.
