This is the first of two volumes that together provide a comprehensive analysis of the embryology, normal anatomy, and pathology of the liver and intrahepatic biliary tract as seen on modern diagnostic imaging techniques. In this volume, readers will find fundamental information on embryology, radiological anatomy, and anatomic variants. A thorough introduction is then provided to each imaging technique, including ultrasound, computed tomography, magnetic resonance imaging, nuclear medicine techniques, angiography, and interventional radiology.

The remainder of the volume is devoted to non-tumoral pathology of the liver and intra-hepatic biliary tract. For each disease, readers will find full description of the roles of individual imaging modalities and extensive illustration of the imaging appearances. The authors are world-leading experts in the field, and the book will be an ideal reference for all members of the radiology community, from residents to experts. It will also aid clinicians during their daily practice.

È con vivo piacere che presento quest'ultima opera del Prof.

Carlo Gaudio, Direttore del Dipartimento Cuore e Grossi Vasi "A. Reale" e Professore di Malattie dell'Apparato Cardiovascolare nella prima Facoltà di Medicina dell'Università "La Sapienza" di Roma, non nuovo ad impegni editoriali, che si aggiungono ad una vasta produzione di articoli scientifici originali, pubblicati sulle migliori riviste italiane ed internazionali di Cardiologia. (...) Il risultato è un'opera estremamente completa, accurata, aggiornata ed allo stesso tempo omogenea, perchè adeguatamente coordinata. L'auspicio è che sia fruibile con profitto sia dagli studenti del Corso di Laurea di Medicina e Chirurgia, sia dagli specializzandi della Scuola di Cardiologia, sia, infine, dagli studiosi del settore. (Dalla presentazione del Professor Luigi Frati)

This book includes detailed discussions of the latest science in the embryogenesis of spinal dysraphic malformations, and a well-illustrated guide to their surgical repair. In addition to covering the actual malformations, and because, with the probable exception of prenatal closure of the open neural tube defect, all surgical repairs of other dysraphic malformations require sophisticated intraoperative neurophysiological monitoring (IONM), an in-depth chapter is devoted to the physics, physiology, techniques, parameters and patterns of electrophysiological responses in representative dysraphic lesions. As the evaluation of bladder function is crucial for the assessment of the pre-operative clinical status and long-term outcome of the patient with spinal dysraphism, an entire chapter is devoted to the neurophysiology of micturition, the symptoms of neuropathic bladder, and to the explanation of the complexities of proper urodynamics. The book will be an invaluable tool for paediatric neurosurgical consultants interested in spinal dysraphism and for fellows and other trainees in this discipline.

Over the last 18 years, there have been many advances in the field of intraoperative monitoring. This new edition of Neurophysiology in Neurosurgery: A Modern Approach provides updates on the original techniques, as well as other more recent methodologies that may either prove beneficial or are commonly used in neuromonitoring. The purpose of this book is to describe the integration of neuromonitoring with surgical procedures. Each methodology is discussed in detail as well as chapters describing how those methodologies are applied to multiple surgical procedures and the evidence used to support those uses. The second edition features a surgical procedure section, which focuses on specific surgical procedures and the type of monitoring used during these procedures. The original chapters have been updated, expanded, and the structure modified to ensure the book is beneficial to both physiologists and surgeons. This book is written for neurosurgeons, neurophysiologists, neurologists, anesthesiologists, interventional neuroradiologists, orthopedic surgeons, and plastic surgeons. - Provides a valuable educational tool that describes the theoretical and practical

aspects of intraoperative monitoring through example - Presents in-depth descriptions of the most advanced techniques in intraoperative neurophysiological monitoring and mapping - Features a surgical procedures section that focuses on specific surgical procedures and the type of monitoring used during these procedures

This atlas documents current surgical approaches to the craniocervical junction and the cervical spine, providing step-by-step guidance on procedures and cervical spine stabilization techniques. Opening chapters present essential information on anatomy, depict pathologies with the aid of illustrative cases, describe the role of imaging techniques in patient evaluation, and discuss surgical instrumentation and patient positioning. The different techniques employed in this delicate anatomic region, including transnasal and transoral endoscopic approaches to the craniocervical junction and posterior and anterior approaches to the cervical spine, are then explained and illustrated with a view to providing the surgeon with a clear reference that can be used in the operating room. In addition, practical advice is offered on the treatment of potential complications, postoperative management, and rehabilitation. This book will be of value not only to neurosurgeons but also to orthopedists, ENT surgeons, neurologists, and physiatrists.

Imaging of Perianal Inflammatory Diseases CAVINATO EDITORE INTERNATIO

L'opera è suddivisa in tre parti. La prima tratta gli aspetti generali e le norme essenziali: sono descritti il Sistema Sanitario

Nazionale, la struttura dell'Azienda sanitaria, il percorso formativo del TSRM, gli aspetti particolari della sua figura professionale e come questa si sia modificata nel passaggio dall'era analogica a quella digitale. Arricchiscono inoltre questa sezione i capitoli sulle norme relative a radiazioni ionizzanti e radioprotezione, oltre che sull'etica, la deontologia e le problematiche medico-forensi. La seconda parte dell'opera percorre sistematicamente l'anatomia umana, regina dell'immagine, per distretti corporei: partendo dall'anatomia macroscopica, illustrata da numerose tavole a colori, si descrive come utilizzare correttamente le metodiche di imaging, così da inquadrare meglio la condizione normale e identificare precocemente il patologico. Chiude il volume una terza sezione dedicata alla verifica dell'apprendimento mediante test a risposta multipla.

Noi siamo una fascia che cammina. Il testo riporta le nozioni anatomiche e funzionali del sistema fasciale, il trattamento dei singoli nervi cranici e periferici, allegando informazioni cliniche ed eventuali test esistenti per la valutazione della funzione propria di ciascun nervo. Si aggiungono, inoltre, diversi capitoli per una disamina su argomenti collegati alla fascia, spesso non presi in considerazione per un trattamento osteopatico, come la postura, la biodinamica e l'intenzione terapeutica. Il libro si pone come un nuovo punto di riferimento per il trattamento dei nervi periferici e cranici, in un connubio tensescretivo moderno e scientifico, ma senza dimenticare il merito degli osteopati che hanno fatto la storia di questa meravigliosa disciplina. La fascia, un sentiero di filosofia e scienza, da percorrere in umiltà e curiosità.

Loco-regional anesthesia offers evident advantages in almost all branches of surgery since it couples perfect anesthesia with prolonged postoperative analgesia. Furthermore, new drugs and techniques are ensuring constant progress, and in the past decade the advent of ultrasound-guided regional anesthesia has played a key role by allowing direct visualization of all anatomic structures involved in regional blocks. In conjunction with electrostimulation, it has significantly increased the success rate of loco-regional anesthesia. This book, comprising 16 chapters and more than 140 color illustrations, provides detailed coverage of the techniques currently employed in upper limb anesthesia. It opens by reviewing the anatomy of the brachial plexus and the

topographic anatomy as it is of the utmost importance for anesthesiologists to have a deep knowledge of anatomy despite the assistance offered by new tools. Subsequently the various techniques, including supraclavicular, infraclavicular, and axillary brachial plexus blocks, peripheral blocks, and intravenous regional anesthesia, are discussed in depth, with due attention to potential complications. Up-to-date information is also provided on the role of ultrasound, and an entire chapter is devoted to ultrasound-guided interscalene and supraclavicular blocks. The book will be an invaluable learning tool for students and an excellent aid in daily clinical practice for anesthesiologists.

Neurophysiology in Neurosurgery Saunders

Degenerative Cervical Myelopathy: From Basic Science to Clinical Practice lays the foundation for understanding DCM manifestation, pathophysiology, diagnosis and treatment strategies. The book covers the latest basic and clinical research, updates on patient management strategies, and discusses promising neuroprotective therapies for the future of DCM care. Written by international experts across a range of topics related to degenerative cervical myelopathy, the book helps readers understand the challenges and future directions of patient management. As degenerative cervical myelopathy (DCM) is the leading cause of spinal cord dysfunction and one of the most common indications for spinal surgery worldwide, the term DCM encompasses a group of chronic, non-traumatic spinal cord injuries that occur due to degenerative changes in the cervical spine (e.g. disc spondylosis or repetitive dynamic injury from hyper-mobility). - Covers recent clinical trial advancements and the impact of trial findings - Presents recent clinical guidelines for

the management of degenerative cervical myelopathy, providing readers with insights regarding the translation of research from bench to bedside - Provides readers with the skills needed to understand the translational pathway using real-life examples

My research consists of the processing of signals from the 14 electrodes of the EMOTIV system, connected to immersive glasses that allow a realistic visual experience and investigate the brain network in order to identify the signals features corresponding to different perceptive and cognitive stimuli. A Matlab-Simulink procedure synchronizes the acquired signals with various sensory experiences presented in a video. Aim of the research is to test the interconnections among brain areas in presence of sensory and emotional stimuli, and show how similar stimuli give rise to chaotic attractors identified with identical or similar codes. The chaotic attractors can be defined as a trajectory of the dynamical system, contained in a finite volume of

phase space. A dynamical system can have chaotic behavior, i.e. an organized (but not periodic) behaviour sensitive to the initial conditions. In this work a custom ANN (ITSOM) processes individual signals or many signals simultaneously. The sequence of the ITSOM winning nodes tends to repeat itself creating a time series of chaotic attractors. The ITSOM attributes similar codes to attractors emerging from similar brain states,

perceptions and emotions. Such attractors are isomorphic to the attractors in which the corresponding dynamic system (the signal time series) is evolving and characterize univocally the input element that produces them. If the attractors are chaotic, this means that the signals are individually self-organized or, examining more signals together, there is a form of coherence between signals.
