The suggestion that a NATO Advanced Study Institute would be an excellent forum for reviews and informed discussion on the broad subject of Nitrogen Ceramics, arose out of discussions with colleagues in the Department of Ceramics at the University of Leeds early in 1975. There was no doubt that such a meeting would be both very valuable and timely. Scientific and technological interest in the nitride ceramics and in silicon nitride in particular had been growing steadily during the 20-year period following 1955. The intensive five-year programme initiated by the Advanced Research Projects Agency of the U. S. Department of Defence, on the development of a design capability in brittle materials for high temperature applications, had been based principally on silicon nitride and silicon carbide ceramics, and was due to reach the end of its first stage in the autumn of 1976. It was clear that by then a considerable volume of information covering many aspects of silicon nitride would be available for presentation or review. Coincidentally, the same five-year period had seen the discovery, and increasingly detailed investigation, of ceramic materials based on the Al-Si-N-O and similar systems. Besides being of great interest for their crystal chemistry and structural relationships, some of these materials could be assumed potentially to be of equal importance to the silicon nitride ceramics. More recently progress had also been made in the sintering of covalent materials, as demonstrated for the case of silicon carbide.

This text, by a leading authority in the field, presents a fundamental and factual development of the science and engineering underlying the design of combustion engines and turbines. An extensive illustration program supports the concepts and theories discussed.

The transportation sector is one of the United States' largest sources of greenhouse gas emissions, and fuel is an important cost for drivers. The period from 2025-2035 could bring the most fundamental transformation in the 100-plus year history of the automobile. Battery electric vehicle costs are likely to fall and reach parity with internal combustion engine vehicles. New generations of fuel cell vehicles will be produced. Connected and automated vehicle technologies will become more common, including likely deployment of some fully automated vehicles. These new categories of vehicles will for the first time assume a major portion of new vehicle sales, while internal combustion engine vehicles with improved powertrain, design, and aerodynamics will continue to be an important part of new vehicle sales and fuel economy improvement. This study is a technical evaluation of the potential for internal combustion engine, hybrid, battery electric, fuel cell, nonpowertrain, and connected and automated vehicle technologies to contribute to efficiency in 2025-2035. In addition to making findings and recommendations related to technology cost and capabilities, Assessment of Technologies for Improving Light-Duty Vehicle Fuel Economy - 2025-2035 considers the impacts of changes in consumer behavior and regulatory regimes.

ROAR!!! Meet Bash the Lion - a playful Lion who loves to learn. Your toddler will enjoy going on learning hunts with Bash as they explore their first numbers. All Bash the Lion My First books are wonderfully put together along with activities that will help your child expand their recognition of items, as well as their vocabulary and pronunciation. Unlike typical picture books (that only display pictures with the names of the objects), Bash the Lion My First books include the 7 different learning concepts (visual, kinesthetic/physical, aural/auditory, social, solitary, verbal and logical) to foster a curiosity in your toddler that will plant the seeds for further reading and learning. We are self-publishers, literally a "mom and pop", so we hope you enjoy our labor of love as we did with our little one.

When the German Wehrmacht swarmed across Eastern Europe, an elite corps followed close at its heels. Along with the SS and Gestapo, the Ordnungspolizei, or Uniformed Police, played a central role in Nazi genocide that until now has been generally neglected by historians of the war. Beginning with the invasion of Poland, the Uniformed Police were charged with following the army to curb resistance, pacify the countryside, patrol Jewish ghettos, and generally maintain order in the conquered territories. Edward Westermann examines how this force emerged as a primary instrument of annihilation, responsible for the murder of hundreds of thousands of the Third Reich's political and racial enemies. In Hitler's Police Battalions he reveals how the institutional mindset of these "ordinary policemen" allowed them to commit atrocities without a second thought. To uncover the story of how the German national police were fashioned into a corps of political soldiers, Westermann reveals initiatives pursued before the war by Heinrich Himmler and Kurt Daluge to create a culture within the existing police forces that fostered anti-Semitism and anti-Communism as institutional norms. Challenging prevailing interpretations of German culture, Westermann draws on extensive archival research—including the testimony of former policemen—to illuminate this transformation and the callous organizational culture that emerged. Purged of dissidents, indoctrinated to idolize Hitler, and trained in military combat, these police battalions—often numbering several hundred men—repeatedly conducted actions against Jews, Slavs, gypsies, asocials, and other groups on their own initiative, even when they had the choice not to. In addition to documenting these atrocities, Westermann examines cooperation between the Ordnungspolizei and the SS and Gestapo, and the close relationship between police and Wehrmacht in the conduct of the anti-partisan campaign of annihilation. Throughout, Westermann stresses the importance of

ideological indoctrination and organizational initiatives within specific groups. It was the organizational culture of the Uniformed Police, he maintains, and not German culture in general that led these men to commit genocide. Hitler's Police Battalions provides the most complete and comprehensive study to date of this neglected branch of Himmler's SS and Police empire and adds a new dimension to our understanding of the Holocaust and the war on the Eastern front.

" ... My excuse for writing this book is a desire to ventilate certain facts in relation to the early work of Karl Benz and Gottlieb Daimler of which the public is largely ignorant. Among those who have taken the trouble to investigate the early days of the motor movement, there is a certain amount of controversy as to who invented the motor vehicle, although this question has not, at the moment, extended to the general public. Inevitably it will do so, if the prevailing interest increases, in which event, it is hoped that this book will prove useful, for all the dates and facts, etc., have been fully authenticated. There are, however, several to whom I must express my sincere gratitude for the assistance they have given me. Herr Rudolf Caracciola, the winner, during the 1935 season of motor racing, of the Grand Prix of France, Belgium, Switzerland, Spain, and Tripoli, to say nothing of other triumphs, and therefore the Champion of Europe, has most kindly written a preface after reading through the manuscript. The Daimler-Benz Aktiengesellschaft of Germany has been indefatigable in providing me with material in regard to certain facts connected with the early experiments of both Benz and Daimler. Mr. Frederick R. Simms, too, has spared no effort to help me with some of the inner details of Daimler's engineering career." (ST. John C. Nixon - September, 1936)

They're incredibly fast, they're incredibly beautiful, and they turn heads and set speed records with every incarnation. Velocity: Supercar Revolution is the first complete history of the supercar and tells the story behind the most desirable cars in the world. With stunning photographs, detailed text, and a host of commentaries from Jay Leno and other collectors, famed automotive photographer John Lamm provides an in-depth historical, cultural, and technological account of these amazing machines. Organized by decade and by top speed, the book details these luxurious cars over the past 40 years as they reached speeds of 170, 180, 190, and finally 200-plus miles per hour, the informal mark of today's supercar. Velocity: Supercar Revolution charts the evolution of the battle for engine supremacy and performance among the world's leading marques, including Ferrari, Lamborghini, Bugatti, Porsche, Aston Martin, Ford GT, among others. The book profiles the designers and engineers who developed these cars, and includes interviews with the racers and celebrities who drive them, and of course, fabulous photographs of the supercars themselves. Included in the book are several hilarious and informative commentaries by Jay Leno, the host of The Tonight Show and one of the best-known automotive collectors and enthusiasts in the world, telling stories and opinions on these cars (many of which he owns). Velocity: Supercar Revolution conveys as never before the power of automotive aesthetics and performance pushed to their absolute limits. It is a benchmark in automotive publishing and destined to become a classic history of these incredible marques.
