Free radical-mediated reactions have been well known in chemistry and physical chemistry for many years. Applying this knowledge to living organisms, biochemists have shown that reactive free radicals are formed at many intracellular sites during normal metabolism, and they have started to suggest possible roles in various pathological processes and conditions, for example in radiation damage, in the metabolism of xenobiotics, in carcinogenesis and in metabolic disorders. At present, a large and relevant mass of experimental evidence supports the view that reactive free radicals are involved in the pathogenesis of several diseases and syndromes. This literature has captured the attention and interest of people involved in the biomedical field. Exciting developments in radical research are probable in the near future, establishing a greater interaction between basic science research and medicine. While the task of defining the involvement of free radicals in human pathology is difficult, it is nonetheless extremely important that such interaction be fulfilled as soon as possible. These were the considerations motivating us during the organization of the VI Biennial Meeting of the International Society for Free Radical Research held in Torino, Italy, in June 1992, and also during the preparation of this book. Experts in the various aspects of free radical research were invited to participate in the Torino Meeting and to contribute chapters for this volume.

The first two editions of this title, published by SAE International in 1990 and 1995, have been best-selling definitive references for those needing technical information about automotive fuels. This long-awaited new edition has been thoroughly revised and updated, yet retains the original fundamental fuels information that readers find so useful. This book is written for those with an interest in or a need to understand automotive fuels. Because automotive fuels can no longer be developed in isolation from the engines that will convert the fuel into the power necessary to drive our automobiles, knowledge of automotive fuels will also be essential to those working with automotive engines. Small quantities of fuel additives increasingly play an important role in bridging the gap that often exists between fuel that can easily be produced and fuel that is needed by the ever-more sophisticated automotive engine. This book pulls together in a single, extensively referenced volume, the three different but related topics of automotive fuels, fuel additives, and engines, and shows how all three areas work together. It includes a brief history of automotive fuels development, followed by chapters on automotive fuels manufacture from crude oil and other fossil sources. One chapter is dedicated to the manufacture of automotive fuels and fuel blending components from renewable sources. The safe handling, transport, and storage of fuels, from all sources, are covered. New combustion systems to achieve reduced emissions and increased efficiency are discussed, and the way in which the fuels' physical and chemical characteristics affect these combustion processes and the emissions produced are included. There is also discussion on engine fuel system development and how these different systems affect the corresponding fuel

requirements. Because the book is for a global market, fuel system technologies that only exist in the legacy fleet in some markets are included. The way in which fuel requirements are developed and specified is discussed. This covers test methods from simple laboratory bench tests, through engine testing, and long-term test procedures.

Women constitute a large portion of the economically active population engaged in agriculture. International instruments on human rights, the environment and sustainable development reaffirm the principle of non-discrimination on the basis of sex or gender. Yet women often face gendered obstacles in realizing their rights and feeding their families. The right to an adequate standard of living, including adequate food, may thus not be fulfilled. These obstacles may stem from directly or indirectly discriminatory norms or from entrenched socio-cultural practices, or both. This study analyses the gender dimension of agriculture-related legislation in a selection of different countries around the world, examining the legal status of women in three key areas: rights to land and other natural resources; rights of women agricultural workers; and rights concerning women's agricultural self-employment activities, ranging from women's status in rural cooperatives to their access to credit, training and extension services.

During the first two-thirds of the 20th century the themes of sectorial structure and compared performance prevail in Italian economic historiography. In contrast, in the last part of the century attention is focused on the behavior of single economic actors and their micro-economic strategies. This book intends to act as a bridge between the two approaches, and reconstructs the secular journey of Italian industrial enterprise through an original study.

This book presents a range of approaches to the study of Old Norse poetry in performance. The contributors examine both eddic and skaldic poems and consider the surviving evidence for how they were originally recited or otherwise performed in medieval Scandinavia, Iceland and at royal courts across Europe. This study also engages with the challenge of reconstructing medieval performance styles and examines ways of applying the modern discipline of Performance Studies to the fragmentary corpus of Old Norse verse. The performance of verse by characters who appear in the Old Icelandic saga tradition is also considered, as is the cultural value associated not only with the poems themselves but with their various means of transmission and reception. This book will be of great interest to students and scholars in the fields of Old Norse studies, Performance and Theatre History.

If you're a tractor enthusiast with a passion for tractor photography, *Legendary Farm Tractors* is a dream-come-true pictorial produced with you in mind. Containing more color photographs of more types of farm tractors than any other book in print, *Legendary Farm Tractors* presents tractors from the United States, Canada, Europe, and Japan—models from the 1880s to today—along with detailed captions, together offering a comprehensive photographic history of tractors. Organized alphabetically by make so that readers can find their favorites easily, the tractors covered here include everything from familiar manufacturers like John Deere, Ford, Farmall, Case, Caterpillar, and International Harvester to obscure tractors that have seldom been seen, such as the special streamlined Porsche coffee plantation tractor that looks more like a sports car than a piece of farm equipment. The extensive variety and distinguished photographs by noted photographer Andrew Morland make this an exceptional book for tractor buffs and the perfect gift book for any machine enthusiast.

The 1978 Italian Psychiatric Reform was welcomed as a significant advancement in the care of the mentally ill, as it involved, for the first time ever, the complete shutdown of psychiatric hospitals in a major Western country. Today, Italian psychiatry is totally different from that of the rest of the world, due to its complete commitment to community care. The transition towards the community model was appraised by many relevant international organisations, such as the World Health Organisation, as a fundamental step towards a better quality of life, well-being and social functioning of persons with mental diseases. This passage wasn't easy, however, and the closure of Italian psychiatric hospitals was accompanied by notable setbacks in the treatment of the most severely affected persons, who often faced the inadequacy of a 'crisis management' system of care rejecting interventions in the long-term. In past decades, pro-reform authors also tended to refuse criticism of such obstacles, due to their extreme commitment towards the principles that inspired their practice. This book provides a much-needed appraisal of the 1970s Italian Psychiatric Reform. With an independent viewpoint, it highlights the often-overlooked shortcomings of the reform, while also presenting a multi-faceted view in contrast with the 'single-vision' attitude often adopted in existing studies on this topic.

This book presents what is the state-of-the-art in the field of the food waste phenomenon at consumer level, including a thorough literature review, and it highlights trends in the field. It

provides a comprehensive starting point for future research. Food waste represents a major public policy issue, which is included in the UN Sustainable Development Goals. In this context, the present work identifies the most important definitions given to food waste and its environmental, social and economic impacts. With a comprehensive literature review that covers a forty-year time span (1977-2017), this book highlights the multiple, complex facets of food waste at the consumer level. Drawing from behavioural and marketing theories, it proposes a new theoretical framework with the aim to better explain food waste behaviour. Extensive research is being carried out on the main worldwide initiatives (both public and private) and food policies aimed at tackling the phenomenon. This book is an edition and translation of one of the most important and celebrated sources of Old Norse-Icelandic mythology and heroic legend, namely the medieval poems now known collectively as the Poetic Edda or Elder Edda. Included are thirty-six texts, which are mostly preserved in medieval manuscripts, especially the thirteenth-century Icelandic codex traditionally known as the Codex Regius of the Poetic Edda. The poems cover diverse subjects, including the creation, destruction and rebirth of the world, the dealings of gods such as Óðinn, Þórr and Loki with giants and each other, and the more intimate, personal tragedies of the hero Sigurðr, his wife Guðrún and the valkyrie Brynhildr. Each poem is provided with an introduction, synopsis and suggestions for further reading. The Old Norse texts are furnished with a textual apparatus recording the manuscript readings behind this edition's emendations, as well as select variant readings. The accompanying translations, informed by the latest scholarship, are concisely annotated to make them as accessible as possible. As the first open-access, single-volume parallel Old Norse edition and English translation of the Poetic Edda, this book will prove a valuable resource for students and scholars of Old Norse literature. It will also interest those researching other fields of medieval literature (especially Old English and Middle High German), and appeal to a wider general audience drawn to the myths and legends of the Viking Age and subsequent centuries.

The Eddic poem *Vafþrúðnismál* serves as a representation of early pagan beliefs or myths and as a myth itself; the poem performs both of these functions, acting as a poetic framework and functioning as sacred myth. In this study, the author looks closely at the journey of the Norse god Óðinn to the hall of the ancient and wise giant Vafþrúðnir, where Óðinn craftily engages his adversary in a life-or-death contest in knowledge.

Close examination of the significant theme of other-worldly encounters in Norse myth and legend, including giantesses, monsters and the Dead. A particular, recurring feature of Old Norse myths and legends is an encounter between creatures of This World [gods and human beings] and those of the Other [giants, giantesses, dwarves, prophetesses, monsters and the dead]. Concentrating on cross-gendered encounters, this book analyses these meetings, and the different motifs and situations they encompass, from the consultation of a prophetess by a king or god, to sexual liaisons and return from the dead. It considers the evidence for their pre-Christian origins, discusses how far individual poets and prose writers were free to modify them, and suggests that they survived in medieval Christian society because [like folk-tale] they provide a non-dogmatic way of resolving social and psychological problems connected with growing up, succession from one generation to the next, sexual relationships and bereavement.

Essays on Eddic Poetry presents a selection of important articles on Old Norse literature by noted medievalist John McKinnell. While McKinnell's work addresses many of the perennial issues in the study of Old Norse, this collection has a special focus on the interplay between heathen and Christian world-views in the poems. Among the texts examined are Hávamál, which includes an elegantly cynical poem about Óðinn's sexual intrigues and a more mystical one about his self-sacrifice on the world-tree in order to gain magical wisdom; Völundarkviða, which recounts an elvish smith's revenge for his captivity and maiming; and Hervararkviða, where the heroine bravely but foolishly raises her dead father to demand the deadly sword Tyrfingr from him. Originally published between 1988 and 2008, these twelve essays cover a wide range of mythological and heroic poems and have been revised and updated to reflect the latest scholarship.

Il libro ricostruisce la storia della scuola "Settembrini" di Lagonegro (1880-1925) dopo un lungo e complesso lavoro di ricerca perché nel tempo sono state smarrite o distrutte le documentazioni istituzionali. Nella scuola "Settembrini", che operò nel Lagonegrese, si svilupparono tante vicende umane di studentesse e professori, anche con straordinari personaggi della cultura: Adele Lehr, madre di Carlo Emilio Gadda; Elisa Avigliano, moglie di Salvatore Di Giacomo; Zanardelli, che la visitò nel 1902; Pasquale Aldinio, provveditore agli studi a Reggio Calabria dopo il terremoto del 1908 e a Milano durante la Grande guerra; Raffaella Faucitano, moglie di Luigi Settembrini; lo scienziato Giuseppe De Lorenzo; Francesco De Sarlo, ideatore nel 1903 del Laboratorio di psicologia sperimentale di Firenze; il pittore Emilio Notte che frequentò le elementari dove si svolgevano i tirocini; il filosofo Michele Federico Sciacca e il direttore RAI Walter Pedullà che insegnarono poi nell'istituto magistrale.

The Evangelium Nicodemi, or Gospel of Nicodemus, was the most widely circulated apocryphal writing in medieval Europe. It depicted the trial, Passion, and crucifixion of Christ as well as his Harrowing of Hell. During the twelfth-century renaissance, some exemplars of the Evangelium Nicodemi found their way to Iceland where its text was later translated into the vernacular and known as Niðrstigningar saga. Dario Bullitta has embarked on a highly fascinating voyage that traces the routes of transmission of the Latin text to Iceland and continental Scandinavia. He argues that the saga is derived from a less popular twelfth-century French redaction of the Evangelium Nicodemi, and that it bears the exegetical and scriptural influences of twelfth-century Parisian scholars active at Saint Victor, Peter Comestor and Peter Lombard in particular. By placing Niðrstigningar saga within the greater theological and homiletical context of early thirteenth-century Iceland, Bullitta successfully adds to our knowledge of the early reception of Latin biblical and apocryphal literature in medieval Iceland and provides a new critical edition and translation of the vernacular text.
