Intelligent Cities Milena Katsarska

This volume is the first international collection of the best physics problems (both theoretical and experimental) given at the national physics competitions for high school students in different countries. The book introduces the short history of the International Physics Olympiad, the Statutes, the Syllabus, the statistical data including complete list of winners and a collection of national reports. Each of the national report will contains — as a main part — the best theoretical and

experimental problems (with complete solutions) given at the national competition or at the training of the team before the international competition. Taking into account that at present the International Physics Olympiad involves about 35 countries, we are sure that the book will be interesting for everybody involved with physics education not only with the physics olympiads.

Europe's Environment Manchester University Press

Every five years from 1955 to 1985, mass Czechoslovak gymnastic demonstrations and sporting parades called Spartakiads were held to mark the 1945 liberation of Czechoslovakia. Involving hundreds of thousands of male and female performers of all ages and held in the world's largest stadium—a space built expressly for this purpose—the synchronized and unified movements of the

Czech citizenry embodied, quite literally, the idealized Socialist people: a powerful yet pliant force directed by the regime. This book explores the political, social, and aesthetic dimensions of these mass physical demonstrations, with a particular focus on their roots in the völkisch nationalism of the German Turner movement and the Czech Sokol gymnastic tradition. Featuring an abundance of photographs, *Spartakiads* takes a new approach to Communist history by opening a window onto the mentality and mundanity behind the Iron Curtain.

This is the third review in the series of reports on the state of the environment throughout the European continent, which also provides an assessment of how the main economic driving forces put pressure on the environment and identifies key areas where further action is needed. It was prepared for the meeting of European environmental ministers held under the auspices of the UN Economic Commission for Europe in Ukraine in May 2003. For the first time, this review covers the entire Russian Federation and the 11 other Eastern European, Caucasus and Central Asian (EECCA) states. Chapters consider: developments in socio-economic sectors such as energy, industry, agriculture, transport and tourism; prominent environmental problems such as climate change, ozone depletion, air pollution and soil degradation; cross-cutting issues of biological diversity and human health impacts; and policy management aspects.

Learning Routledge

At the turn of the century some cities and regions in Europe, Japan and the USA, displayed an exceptional capacity to incubate and develop new knowledge and innovations. The favourable environment for research, technology and innovation created in these areas was not immediately obvious, yet it was of great significance for a development based on knowledge, learning, and innovation. *Intelligent Cities* focuses on these environments of innovation, and the major models (technopoles, innovating regions, intelligent cities) for creating an environment-supporting technology, innovation, learning, and knowledge-based development. The introduction and the first chapter deal with innovation as an environmental condition, and with the geography and typology of islands of innovation. The next three parts focus on the theoretical paradigms and the planning models of the 'industrial district', the 'innovating region', and the 'intelligent city', which offer three alternative ways to create an environment of innovation.

In this volume they present innumerable beautiful results, intriguing problems, and ingenious solutions. The problems range from elementary gems to deep truths.

The supremacy of the global fascist superman never became a reality but was certainly an intention. This work explores the use of the image of the male body in European, American and Asian fascism of varying degrees and various interpretations, and the differences and similarities involved.

This volume gathers recent research findings in the field of foreign language (FL) teaching in Romanian higher education dwelling on both methodology and students' learning outcomes. The book satisfies the need for an up-to-date overview of FL teaching in Romanian universities in the European context as well as from a global international perspective. This book confers visibility to Romanian foreign language scholars' research and it opens new paths for debate and collaboration worldwide. The scholars included in this volume have extensive expertise in the field of foreign language teaching and research in higher education which is supported by their international recognition as specialists in their specific areas. The contributing authors approach their respective chapters relying on both qualitative and quantitative research. Their experience and conclusions will prove helpful for any foreign language professional working in tertiary education.

Problems in Real Analysis: Advanced Calculus on the Real Axis features a comprehensive collection of challenging problems in mathematical analysis that aim to promote creative, non-standard techniques for solving problems. This self-contained text offers a host of new mathematical tools and strategies which develop a connection between analysis and other mathematical disciplines, such as physics and engineering. A broad view of mathematics is presented throughout; the text is excellent for the classroom or self-study. It is intended for undergraduate and graduate students in mathematics, as well as for researchers engaged in the interplay between applied analysis, mathematical physics, and numerical analysis.

This book presents the papers delivered at the Conference on Systems and Computer Science held at the University of Western Ontario in September 1965. The primary purposes of the Conference were the promotion of research and the development of the teaching of computer science in Canadian universities. The papers focus attention on some of the concepts of Computer Science as a new field of study and at the same time provide a background for scientists looking at the subject for the first time. The chief developments in computer science have been concerned with the "applied" rather than the "pure" areas of the field: numerical analysis, applied statistics and operations research, and data processing. But there is something more to computers than the physical components and this book represents an attempt to correct the imbalance between "applied" and "pure" by drawing attention to certain theoretical aspects of computer and information science. Among the topics discussed are the theory of finite and infinite automata, aspects of formal language theory, heuristic and non-heuristic approaches to theorem proving and the mathematical formulation of the theory of general systems. There are also references to the problems of machine design, to software systems including higher-level languages, to multiple control computer models and to applied systems. This collection of papers will appeal first to graduate students and professors in Computer Science. It will also be of interest to computer scientists in industry and in government and university research groups and to the scientific public interested in discovering

some of the principal ingredients and directions of the computer and information sciences.

It is the early Cold War. The Soviet Union appears to be in irresistible ascendance and moves to exploit the Olympic Games as a vehicle for promoting international communism. In response, the United States conceives a subtle, far-reaching psychological warfare campaign to blunt the Soviet advance. Drawing on newly declassified materials and archives, Toby C. Rider chronicles how the U.S. government used the Olympics to promote democracy and its own policy aims during the tense early phase of the Cold War. Rider shows how the government, though constrained by traditions against interference in the Games, eluded detection by cooperating with private groups, including secretly funded émigré organizations bent on liberating their home countries from Soviet control. At the same time, the United States utilized Olympic host cities as launching pads for hyping the American economic and political system. Behind the scenes, meanwhile, the government attempted clandestine manipulation of the International Olympic Committee. Rider also details the campaigns that sent propaganda materials around the globe as the United States mobilized culture in general, and sports in particular, to fight the communist threat. Deeply researched and boldly argued, *Cold War Games* recovers an essential chapter in Olympic and postwar history.

The Aesthetics of Paradoxism (criticism) Xyz Press

This book presents an ethnographic description and sociological interpretation of the 'football gatherings' that evolved out of central Romania in the late twentieth century. In the 1980's, Romanian public television did not broadcast football mega-events for economic and political reasons. In response, masses of people would leave their homes and travel into the mountains to pick-up the TV broadcast from neighbouring countries. The phenomenon grew into a social institution with a penetrating force: it produced an alternative social space and a dissident public that pointed to a form of resistance taking place through football. *Forbidden Football in Ceausescu's Romania* provides an insight into the everyday life under the pressure of dictatorship and, through the special patterns of sports consumption, it tells a social history through small individual stories related to football.

During his lifetime, W.E. Blatz was so much occupied with the development of the University of Toronto's Institute of Child Study that he was able to devote little time to writing. This is his first book to appear in twenty-one years, and his first complete exposition of his famous Theory of Security. The Theory of Security is radically different from the theories promulgated by Freudian

psychologists. Whereas Freudian personality theory is based on the notion of "unconscious," an entity that is only indirectly observable, the Theory of Security derives from the observation of the conscious state in all its manifestations. Dr. Blatz thus makes use of both empirical observations and the results of introspection, and, as might be expected, some of his conclusions run counter to those reached in much current psychological discussion. But proof of the forcible influence of the theory and its author may be found in the impressive number of books and articles already published by Dr. Blatz's associates at the Institute of Child Study, applying the theory to the practical problems of psychological observation and therapy. It is fitting that the man whose work has generated so much fruitful research by others in this field should at last have set down in book form the fundamental principles that guided them.

Lucas' "The Art of Public Speaking" is the leading public speaking textbook in the field. Whether a novice or an experienced speaker when beginning the course, every student will learn how to be a better public speaker through Lucas' clear explanations. Creative activities, vivid examples, annotated speech samples, and foundation of classic and contemporary rhetoric provide students a strong understanding of public speaking. When instructors teach from this textbook, they benefit from Lucas' Integrated Teaching Package. The Annotated Instructor's Edition and Instructor's Manual, both written by Steve Lucas, provide teaching tips and give outlines on how to use the various supplements. As a result, instructors are able to see various teaching examples, how to integrate technology, and analyses and discussion questions for video clips in class. The Annotated Instructor's Edition, Instructor's Manual, Test Bank, CDs, videos, and other supplements provide instructors the tools needed to create a dynamic classroom. This edition has a supplement to meet the needs of online classes, *Teaching Public Speaking Online with The Art of Public Speaking*.
