 The Routledge Companion to Automobile Heritage, Culture, and Preservation explores automotive heritage, its place in society, and the ways we might preserve and conserve it. Drawing on contributions from academics and practitioners around the world and comprising six sections, this volume carries the heritage discourse forward by exploring the complex and sometimes intricate place of automobiles within society. Taken as a whole, this book helps to shape how we think about automobile heritage

and considers how that heritage explores a range of cultural, intellectual, emotional, and material elements well outside of the automobile body itself. Most importantly, perhaps, it questions how we might better acknowledge the importance of automotive heritage now and in the future. The Routledge Companion to Automobile Heritage, Culture, and Preservation is unique in that it juxtaposes theory with practice, academic approaches with practical experience, and recognizes that issues of preservation and conservation belong in a broad context. As such, this volume should be essential reading for both academics and practitioners with an interest in automobiles, cultural heritage, and preservation.

 Few launch vehicles are as iconic and distinctive as NASA's behemoth rocket, the Saturn V, and none left such a lasting impression on those who watched it ascend. Developed with the specific brief to send humans to the Moon, it pushed rocketry to new scales. Its greatest triumph is that it achieved its goal repeatedly with an enviable record of mission success. Haynes' Saturn V Manual tells the story of this magnificent and hugely powerful machine. It explains how each of the vehicle's three stages worked; Boeing's S-IC first stage with a power output as great as the UK's peak electricity consumption, North American Aviation's S-II troubled second stage, Douglas's workhorse S-IVB third stage with its instrument unit brain - as much a spacecraft as a rocket. From the decision to build it to the operation of its engines' valves and pumps, this lavishly illustrated and deeply informative book offers a deeper appreciation of the amazing Saturn V.

Triumph's Bonneville and its sibling, the TR6, are two of the most revered models in all of motorcycling. Distinguished by their handsome lines and pace-setting performance, the Bonneville and Tiger ruled the streets and race tracks from their introduction in the late 1950s through Triumph's golden age in the 1960s.

Devotion to the marque remained strong even as the sun slowly set on the company's fortunes in the late 1970s and early 1980s. The original Triumph's demise in 1983 simply served to cement the legendary status of its long-lived top guns, the Bonneville and TR6. Today the Bonnie and Tiger are highly sought-after classics-machines whose pedigree demands correct mechanical restoration and accurate refinishing. Triumph Bonneville and TR6

Motorcycle Restoration Guide: 1956-1983 contains all the information needed to guarantee the correct restoration of your classic. More than 250 photos and extensive technical appendices supplement Triumph expert David Gaylin's thoroughly researched text.
