Anak autisme memiliki kebutuhan dasar yang sama dengan anak normal lainnya. Namun akibat dari gangguan perkembangan yang dialami menyebabkan mereka tidak atau kurang mampu memenuhi kebutuhannya tersebut secara mandiri. Tujuan penelitian ini adalah mengetahui kapasitas orang tua terhadap personal hygiene anak autis. Jenis penelitian deskriptif. Populasi penelitian ini adalah semua orang tua yang memiliki anak autis dengan jumlah sampel 30 responden. menggunakan teknik total sampling. Variabel dalam penelitian ini adalah kapasitas orang tua terhadap

personal hygiene anak autis. Instrumen penelitian menggunakan kuesioner. Data yang diperoleh kemudian diproses editing, coding, scoring dan tabulating. Hasil penelitian menunjukkan bahwa sebagian besar orang tua memiliki kapasitas maksimal terhadap personal hygiene (mandi) anak autis yaitu 21 orang (70%). Sebagian besar orang tua memiliki kapasitas maksimal terhadap personal hygiene (keramas) anak autis yaitu 21 orang (70%). Sebagian besar orang tua memiliki kapasitas maksimal terhadap personal hygiene (gosok gigi) anak autis yaitu 22 orang (73,3%). Sebagian besar orang tua memiliki kapasitas maksimal terhadap personal hygiene (cuci tangan) anak autis yaitu 20 orang (63,7%). Sebagian besar orang tua memiliki kapasitas maksimal

terhadap personal hygiene (memotong kuku) anak autis yaitu 19 orang (63,3%). Saran dari hasil penelitian yaitu memberikan pendidikan dan pelatihan kepada orang tua yang memiliki anak autis dalam mengelola sumber-sumber daya yang dimiliki, paling tidak uang dan waktu dalam upaya peningkatan kapasitas orang tua terhadap personal hygiene anak autis. Diharapkan hasil penelitian ini dapat dikembangkan dengan menyertakan variabel yang belum diangkat dalam pelaksanaan penelitian ini.

INTRODUCTION TO HEALTH BEHAVIORS:

A GUIDE FOR MANAGERS, PRACTITIONERS & EDUCATORS is written specifically for professionals new to health behavior theory and challenged to shape the health behaviors of others. With its unique applied approach to learning theoretical constructs, INTRODUCTION TO HEALTH BEHAVIORS changes the way learners think and behave in relationship to planning health promotion programs. This text introduces theory as a foundation of deep factual knowledge that is then synthesized and built upon in ways that help students understand the relationships between behaviors and health, antecedents and behaviors, and interventions and antecedents. An innovative chapter on the PER Worksheet, a tool that combines the

eight most popular health behavior theories into one framework, teaches learners how to organize facts across the different theories as well as incorporate future knowledge. INTRODUCTION TO HEALTH BEHAVIORS t also offers comprehensive coverage of topics such as determinants of population health status, logic models and how both theory and models are useful for designing multi-level interventions of change. Nanoscience in Dermatology covers one of the two fastest growing areas within dermatological science, nanoscience and nanotechnology in dermatology.

Recently, great progress has been made in the research and development of nanotechnologies and nanomaterials related to various applications in medicine and, in general, the life

sciences. There is increasing enthusiasm for nanotechnology applications in dermatology (drug delivery, diagnostics, therapeutics, imaging, sensors, etc.) for understanding skin biology, improving early detection and treatment of skin diseases, and in the design and optimization of cosmetics. Light sensitive nanoparticles have recently been explored, opening a new era for the combined applications of light with nanotechnology, also called photonanodermatology. However, concerns have been raised regarding the adverse effects of intentional and unintentional nanoparticle exposure and their toxicity. Written by experts working in these exciting fields, this book extensively covers nanotechnology applications, together with the

fundamentals and toxicity aspects. It not only addresses current applications of nanotechnology, but also discusses future trends of these ever-growing and rapidly changing fields, providing scientists and dermatologists with a clear understanding of the advantages and challenges of nanotechnology in skin medicine. Provides knowledge of current and future applications of nanoscience and nanotechnology in dermatology Outlines the fundamentals, methods, toxicity aspects, and other relevant aspects for nanotechnology based applications in dermatology Coherently structured book written by experts working in the fields covered *Sobotta Atlas of Human Anatomy, Vol.1, 15th ed., English World Health Organization*

Assessment of Risk and Risk Management for Water-related Infectious Disease Springer Science & Business Media

Abstract: A biocultural approach to nutrition emphasizes the impact of the social sciences on food intake. Purchasing, preferences and ideology are heavily influenced by social, economic, political, and cultural processes. Food consumption surveys, data collection and analysis (including types of dietary surveys), the interview, statistical methods, and reliability of methods are discussed. Time and cost factors have led to new approaches in dietary assessment such as scalogram analysis, food scores, and quality indices. Widely divergent dietary patterns of Americans are discussed by

ethnic group: Puerto Ricans, Black Americans, Mexican Americans, American Indians (several tribes), and Asian Americans (Chinese, Japanese, Vietnamese, Filipinos, Hawaiians). Food habit modification is complex due to a rigid structure of social values that determine behavior.

Nutrition/communication specialists are needed for research activities, mass media, governmental nutrition action programs and mandated nutrition education programs. Ethics of nutrition intervention are an important concern in affecting dietary changes. Each chapter is followed by a lengthy bibliography. (rkm).

Measuring Caring CRC Press

In our society's aggressive pursuit of cures for cancer, we have neglected symptom control and comfort care. Less than one percent of the National Cancer Institute's budget is spent on any aspect of palliative care research or education, despite the half million people who die of cancer each year and the larger number living with cancer and its symptoms. *Improving Palliative Care for Cancer* examines the barriers—scientific, policy, and social—that keep those in need from getting good palliative care. It goes on to recommend public- and private-sector actions that would lead to the

development of more effective palliative interventions; better information about currently used interventions; and greater knowledge about, and access to, palliative care for all those with cancer who would benefit from it.
