Law and Practice for Architects CRC Press

The authors provide practical information that can be used by all construction industry professionals, as well as detailed analyses of California construction law-both as codified in the statutes & as expressed by California courts. The topics in the book are organized in the same manner as they would actually arise in a construction project. First, it deals with pre-construction issues-licensing, bidding, & the formation of the construction contract. Then it discusses what happens when things go wrong-breach of contract by the owner and/or the contractor. An in-depth analysis is provided with regard to claims involving delay, disruption, & acceleration. Several chapters are then devoted to statutory remedies-mechanics' liens, stop notices, & bonds both on public & private works. Finally, coverage is provided on other issues & subjects involving the construction industry, including expanding liability, construction defect issues, bankruptcy, & alternative dispute resolution.

FIDIC Contracts: Law and Practice Taylor & Francis

Changes to the work on construction projects are a common cause of dispute. Such variations lead to thousands of claims in the UK every year and many more internationally. Liability for variations is not only relevant to claims for sums due for extra work but this is also an important underlying factor in many other construction disputes, such as delay, disruption, defects and project termination. This is the first book to deal exclusively with variations in construction contracts and provide the detailed and comprehensive coverage that it demands. Construction Contract Variations analyses the issues that arise in determining whether certain work is a variation, the contractor's obligation to undertake such work as well as its right to be paid. It deals with the employer's power to vary and the extent of its duties to approve changes. The book also analyses the role of the consultant in the process and the valuation of variations. It reviews these topics by reference to a range of construction contracts. This is an essential guide for practitioners and industry professionals who advise on these issues and have a role in managing, directing and compensating

change. Participants in the construction industry will find this book an invaluable guide, as will specialists and students of construction law, project management and quantity surveying.

California Construction Law CRC Press

Published in three volumes, it is the most comprehensive text on this subject, and provides a unique and invaluable comparative, multi-jurisdictional approach. This book has been described by Lord Justice Jackson as a "tour de force", and by His Honour Humphrey Lloyd QC as "seminal" and "definitive". This new edition builds on that strong foundation and has been fully updated to include extensive references to very latest case law, as well as changes to statutes and regulations. The laws of Hong Kong and Singapore are also now covered in detail, in addition to those of England and Australia. Practitioners, as well as interested academics and post-graduate students, will all find this book to be an invaluable guide to the many facets of construction law.

This book provides comprehensive, rigorous and up-to-date coverage of key issues that have emerged in the first quarter of the 21st Century in transnational construction arbitration and alternative dispute resolution (ADR). Covering four general themes, this book discusses: the increasing internationalisation of dispute resolution in construction law; the increasing reliance on technology in the management of construction projects and construction arbitration/ADR; the increasing prominence of collaborative contracting in construction and infrastructure projects; the increasing importance of contractual adjudication such as dispute boards in construction and infrastructure projects; the increasing prevalence of statutory adjudication mechanisms across the world; and the greater incidence of investment disputes and disputes against States and State entities over construction and infrastructure concessions and agreements. Tapping on their substantial expertise in practice and in research, the contributor team of senior practitioners and academics in the area of construction law and dispute resolution provide readers with information that balances an intellectually rigorous academic contribution against the backdrop of real concerns raised in practice. Construction Arbitration and Alternative Dispute Resolution is an invaluable resource for practitioners in the field, academics in arbitration and construction law, and post-graduate students in construction law and dispute resolution.
