Managing information within the enterprise has always been a vital and important task to support the day-to-day business operations and to enable analysis of that data for decision making to better manage and grow the business for improved profitability. To do all that, clearly the data must be accurate and organized so it is accessible and understandable to all who need it. That task has grown in importance as the volume of enterprise data has been growing significantly (analyst estimates of 40 - 50% growth per year are not uncommon) over the years.

However, most of that data has been what we call "structured" data, which is the type that can fit neatly into rows and columns and be more easily analyzed. Now we are in the era of "big data." This significantly increases the volume of data available, but it is in a form called "unstructured" data. That is, data from sources that are not as easily organized, such as data from emails, spreadsheets, sensors, video, audio, and social media sites. There is valuable information in all that data but it calls for new processes to enable it to be analyzed. All this has brought with it a renewed and critical need to manage and organize that data with clarity of meaning, understandability, and interoperability. That is, you must be able to integrate this data when it is from

within an enterprise but also importantly when it is from many different external sources. What is described here has been and is being done to varying extents. It is called "information governance." Governing this information however has proven to be challenging. But without governance, much of the data can be less useful and perhaps even used incorrectly, significantly impacting enterprise decision making. So we must also respect the needs for information security, consistency, and validity or else suffer the potential economic and legal consequences. Implementing sound governance practices needs to be an integral part of the information control in our organizations. This IBM® Redbooks® publication focuses on the building blocks of a solid governance program. It examines some familiar governance initiative scenarios, identifying how they underpin key governance initiatives, such as Master Data Management, Quality Management, Security and Privacy, and Information Lifecycle Management. IBM Information Management and Governance solutions provide a comprehensive suite to help organizations better understand and build their governance solutions. The book also identifies new and innovative approaches that are developed by IBM practice leaders that can help as you implement the foundation capabilities in your organizations.

Future growth in the countries in Eastern Europe and Central Asia (ECA) will increasingly depend on innovation. And innovation requires skills. This makes it important, as countries plan for recovery, to undertake reforms to reduce the skills shortages that the previous growth episode exposed. Education systems have a very important role to play in creating the right skills. But education systems in the region fall short of the demands of their economies in two major ways. The first is that despite high levels of enrollment they do not produce enough graduates with the right skills. Students graduate with diplomas, not with skills, because the quality of the education for many students is poor. In large part this is because education systems remain focused on providing an excellent education to a few at the expense of improving the quality of learning for the majority. Moreover, the

systems are still making the transition from teaching the basics to inculcating higher order skills such as critical-thinking and problem solving. The second way in which education systems fall short is that outside of a few countries in the EU there are few opportunities for adults to retrain, or acquire new skills. This book argues that generating more of the right skills requires a fundamental change of approach in the education systems in the region so that they aim for, and deliver, higher quality education for the vast majority of students (□not just diplomas but skills□). To start with, education systems need to □turn the lights on□ and take seriously the measurement of what students actually learn as opposed to measurement of the inputs into the education process on the implicit assumption that learning follows. Policy makers also need to move away from the focus on inputs and processes and increase the emphasis on incentives.

The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of *When: The Scientific Secrets of Perfect Timing*. Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That’s a mistake, says Daniel H. Pink (author of *To Sell Is Human: The Surprising Truth About Motivating Others*). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.
