'At least love yourself before loving others' I know the title is much known to readers, but we disregard the lessons we know much in our lives. When we are born and

commence our life, we encounter diverse people with different attributes to achieve our purpose in life. Some teach us lessons while some remains with us, but this is not the way we should live our lives. We think we are candid and the finest curtain in front of the window, but life doesn't work like that. Most of the people waste half of their lives chasing hoax dreams, pretending to be theirs. If you don't know who you are then, you will never be able to know what you will become. 'We occupy many unconscious thoughts in our mind. When we think 100% we should write merely 1% which should be best, precise and useful.'

Proceedings Cambridge University Press
Interest in filter theory and design has been growing with the telecommunications industry since the late nineteenth century. Now that telecommunications has become so critical to industry, filter research has assumed even greater importance at companies and academic institutions around the world. The CRC Handbook of Electrical Filters fills in the gaps for engineers and scientists who need a basic introduction to the subject. Unlike the currently available textbooks, which are filled with detailed, highly technical analysis geared to the specialist, this practical guide provides useful information for the non-specialist about the various types of filters, their design, and applications. The handbook covers approximation theory and methods and introduces CAD packages that perform approximation and synthesis for both analog and digital filters. Also included are design methods for LCR, active-RC, digital, mechanical, and switched capacitor (SC) filters. A thorough survey of current design trends rounds out this complete assessment of a key field of study.
