Federally owned capital assets include some 500,000 buildings and similar facilities worldwide acquired during 200 years of government operations. Government facilities are used to defend the national interest; conduct foreign policy; house historic, cultural and educational artifacts; pursue research; and provide services to the American public. These buildings and structures project an image of American government at home and abroad, contribute to the architectural and socioeconomic fabric of their communities, and support the organizational and individual performance of federal employees conducting the

business of government . Federal facilities embody significant investments and resources and therefore constitute a portfolio of public assets. At least 30 separate agencies manage these facilities. As stewards of this public investment, federal facilities program managers face a number of challenges. In the 1990s Congress and the Executive Branch took a number of initiatives to improve capital asset decision making in the federal government. These include enacting the Government Performance and Results Act of 1993, the Federal Acquisition Streamlining Act of 1994, the Clinger-Cohen Act of 1996 and a series of federal financial accounting standards; developing the Capital Programming Guide (1997); and appointing the President's Commission to Study Capital Budgeting (1997). Senior and mid-level agency officials are now seeking ways to implement these initiatives efficiently and effectively. The Federal Facilities Council (FFC) sponsored a conference entitled "Capital Asset Management: Tools and Strategies For Decision Making" to highlight

strategies and ideas for capital asset management so that federal and other public agencies can improve decision making for facilities investment. Held at the National Academy of Sciences in Washington, D.C., on September 13, 2000, the conference featured speakers from the public, non-profit, and private sectors. *Capital Asset Management: Tools and Strategies For Decision Making: Conference Proceedings* summarizes the presentations made at that conference. The speakers focused on trends and best practices in capital budgeting; capital asset decision making processes in three federal agencies; building a case for capital reinvestment; and new tools for federal agencies. Online resources referred to by the speakers are listed in Appendix A. Appendix B contains the speakers' biographies. *Theory and Practice* Springer  
An overview of central topics of financial management The book offers a clear and very compact presentation of the central issues of corporate finance and financial management for students at universities as well as for practitioners

and entrepreneurs. Due to the clear language and the underpinning with many examples in the text as well as the frequent reference to data from business practice, the book is also very suitable for self-study. The focus is on Austrian and Central European conditions.

Proven, practical techniques for estimating the cost of capital "I would recommend Cost of Capital and the companion Cost of Capital Workbook as excellent tools for passing the various professional exams that lead to valuation accreditations and designations." -James R. Hitchner, Phillips Hitchner Group, Inc., Atlanta, Georgia "As a discussion leader for the AICPA ABV exam review course, this set of questions is perfect for people to use for practice for that exam and others (ASA and NACVA from my experience), for that matter. The mix of formats, including exercises, is great." - Ronald L. Seigneur, Seigneur & Company, PC, CPAs, Lakewood, Colorado "The exercises are particularly good." - Stephen J. Bravo, Apogee

Business Valuations, Framingham, Massachusetts Cost of capital estimation has long been recognized as one of the most critical elements in business valuation, capital budgeting, feasibility studies, and corporate finance decisions-it is also, however, one of the most difficult procedures to perform and assess. The Cost of Capital Workbook will help financial officers of small, midsize, and even multibillion dollar companies estimate required rates of return and tackle the myriad issues associated with cost of capital. It will also help business valuation professionals of all levels to gain a greater understanding of cost of capital concepts and procedures. Using hands-on exercises designed to implement procedures described in Cost of Capital, Second Edition, the Cost of Capital Workbook provides a deeper understanding of cost of capital problems by offering a practical experience in applying solutions. The Workbook includes multiple choice, true or false, and fill-in-the-blank questions as well as: \* Exercises estimating cost of capital

by the build-up model and the Capital Asset Pricing Model \* Exercises using Ibbotson Associates' Stocks, Bonds, Bills, and Inflation Valuation Edition Yearbook \* Applications using discounted cash flow (DCF) methods, based on forecasted earnings and cash flows \* Examples covering valuing a business by both equity and invested capital procedures, making project selections, and utility-rate determinations \* Numerous exercises using Ibbotson data from the Cost of Capital Workbook Business appraisers, corporate finance officers, CPAs, and attorneys will find the Cost of Capital Workbook an indispensable guide to the effective estimation and application of cost of capital.

The proven, effective strategy for reinventing your business in the age of ever-present disruption Disruption by digital technologies? That's not a new story. But what is new is the "wise pivot," a replicable strategy for harnessing disruption to survive, grow, and be relevant to the future. It's a strategy for perpetual

reinvention across the old, now, and new elements of any business. Rapid recent advances in technology are forcing leaders in every business to rethink long-held beliefs about how to adapt to emerging technologies and new markets. What has become abundantly clear: in the digital age, conventional wisdom about business transformation no longer works, if it ever did. Based on Accenture's own experience of reinventing itself in the face of disruption, the company's real world client work, and a rigorous two-year study of thousands of businesses across 30 industries, Pivot to the Future reveals methodical and bold moves for finding and releasing new sources of trapped value-unlocked by bridging the gap between what is technologically possible and how technologies are being used. The freed value enables companies to simultaneously reinvent their legacy, and current and new businesses. Pivot to the Future is for leaders who seek to turn the existential threats of today and tomorrow into sustainable growth, with the courage to

understand that a wise pivot strategy is not a one-time event, but a commitment to a future of perpetual reinvention, where one pivot is followed by the next and the next.

This book explains the financial appraisal of capital budgeting projects. The coverage extends from the development of basic concepts, principles and techniques to the application of them in increasingly complex and real-world situations. Identification and estimation (including forecasting) of cash flows, project appraisal formulae, and the application of net present value (NPV), internal rate of return (IRR) and other project evaluation criteria are illustrated with a variety of calculation examples. Risk analysis is extensively covered by the use of risk adjusted discount rate, certainty equivalent, sensitivity, simulation and Monte Carlo analysis. The NPV and IRR models are further applied to forestry, property and international investments. Resource constraints are introduced to the capital budgeting decisions with a variety of

worked examples using linear programming technique. All calculations are extensively supported by Excel workbooks on the Web, and each chapter is well reviewed by end of chapter questions.

This paper aims to provide an overview of past and current budgeting practices for public investment. The

study will also provide a comparison between the budget practices between low-income countries and developed countries and make a series of recommendations for how to ensure efficient integration of capital planning and budget management in low-income countries.
