Treatment And Disposal By Wastewater treatment - Wastewater treatment - Sludge treatment and disposal: The residue that accumulates in sewage treatment plants is called sludge (or biosolids). Sewage sludge is the solid, semisolid, or slurry residual material that is produced as a by-product of wastewater

treatment processes. This residue is commonly classified as primary and secondary sludge. Wastewater treatment - Sludge treatment and disposal ... Sewage treatment is the process of removing contaminants from municipal wastewater, containing mainly household sewage plus some industrial wastewater. Physical, chemical, and biological processes are used to remove contaminants and produce treated wastewater (or treated effluent) that is safe enough for release into the environment. A by-product of sewage treatment is a semi-solid waste or ... Sewage treatment - Wikipedia Sewage treatment is a process that removes the majority of the contaminants from wastewater or sewage and produces both a liquid effluent suitable for disposal in the natural environment and sludge. Estimates from the Ministry of New and Renewable Energy (MNRE) in India suggest that there is a potential of about 226 MW to be generated from treated and untreated sewage sludge (Vaish et al ...
