Academic geriatrics are always looking for an improved objective, quantifiable measure of biological ageing in humans to replace that unphysiological and arbitrary scale 'years survived'. The MCQ may be the nearest we have come yet to achieving this Holy Grail. An individual's facility with the setting and answering of MCQs separates the medical generations more surely than years. I am only grateful I was educated in a less rigorous but perhaps more 'gentlemanly' era. If one appeared before an examiner neatly dressed with clean finger nails and the examination scripts were literate essays written in fountain pen then you were in - or so it seemed. For the past 20 years we have been evolving towards much more objective and rigorous assessment of knowledge and understanding of medicine of both undergraduate and postgraduate students. This process has been

exemplified by the evolution of what is now the seemingly ubiquitous MCQ. When initially presented as objective and quantifiable measures of clinical knowledge MCQs were the subject of scorn - how could they assess the art of medicine - the grey areas of clinical decision making? However they very rapidly overcame this antediluvian scepticism and I believe they have had an effect well beyond the limited area of competence measurement. They have induced or at the very least contributed to a shift towards a more rigorous, dare one say more scientific, approach to clinical medicine.

When I was preparing for DM entrance, I experienced a dearth of books on the subject of oncology and the books that were available were either not updated or were lacking in depth, that was when I conceived the idea of writing such a book myself. I have written this book purely from the perspective of an oncologist and by relying on the highest quality material, most importantly the Bible of oncology: DeVita, Hellman, and Rosenberg's Cancer Principles & Practice of Oncology 11th edition. The NCCN guidelines and high impact journals were also referenced as and when needed. The result is this book, which will serve the purpose of equipping the exam going (NEET-SS and board review, along with any other entrance

exam where questions about oncology are asked) doctors with the right tool to test and build their knowledge. As the knowledge in the field of oncology is unfolding at an unprecedented scale and new strategies are being devised at a prolific pace, it is not possible to provide all of the updated information, all at once. I will be updating this book periodically for this purpose and I would implore readers to keep themselves updated by going through the quarterly updates of DeVita's oncology that are included with the purchase of the 11th edition and also the NCCN guidelines. In case of any queries and suggestions regarding this book, kindly send to: bhratri@gmail.com. Dr. Bhratri Bhushan MBBS, MD (Internal medicine), DM (Medical oncology) is a consultant medical oncologist and hematologist. He has published a number of books on the subject of oncology and his papers have been published in renowned journals of medical literature. *Radiation Oncology A MCQ and Case Study-Based Review*
