The history of automobiles is not just the story of invention, manufacturing, and marketing; it is also a story of repair. Auto Mechanics opens the repair shop to historical study—for the first time—by tracing the emergence of a dirty, difficult, and important profession. Kevin L. Borg's study spans a century of automotive

technology—from the horseless carriage of the late nineteenth century to the "check engine" light of the late twentieth.

Drawing from a diverse body of source material, Borg explores how the mechanic's occupation formed and evolved within the context of broad American fault lines of class, race, and gender and how vocational education entwined these tensions around the mechanic's unique expertise. He further shows how aspects of the consumer rights and environmental movements, as well as the design of automotive electronics, reflected and challenged the social identity and expertise of the mechanic. In the history of the American auto mechanic, Borg finds the origins of a persistent anxiety that even today accompanies the prospect of taking one's car in for repair.

Motorbooks  
Volkswagen's GTI, Golf, and Jetta are long-time favorites among sport-compact performance enthusiasts. With engines ranging from the 2.0 liter naturally-aspirated four-cylinder to the 1.8 liter turbo 4 to the VR6, the Mk III and Mk IV generations (1993-2004) offer tuners a wealth of opportunities. This book turns these opportunities into realities, from deciding which vehicle to buy, to keeping it running in tip-top condition, to enhancing the performance and appearance of your VW. Focusing on the engine, wheels and tires, suspension, body kits, interiors, and more, each

project includes straightforward instruction along with details about the necessary parts, cost, time, and skill. If you want to get the biggest bang for your VW buck, this book is your road map.

'The topic is important

and neglected and has

major implications for the

types of industrial policy

that make any sense in

transition countries. The

clear message of this

book is that protective

science and technology

policies would, for the

most part, be a total

waste of money. What is

needed now is

internationalization and a demand-driven approach, exactly the opposite of the former nationally based and supply-led systems existing under socialism.' - Paul Hare, Heriot-Watt University Edinburgh, UK 'Here is a book that goes beyond the abstractions and platitudes of conventional "transition economics" to look at what is really happening on the ground in the post-socialist countries of Eastern Europe . . . The Globalization of Industry and Innovation in Eastern Europe presents a provocative but richly documented assessment of the central dynamic issues facing the East European economies today.' - David Dyker, SPRU - Science and Technology Policy Research, University of Sussex, UK In this important book, industrial and enterprise reform over the last decade in Eastern Europe is critically reviewed in light of increasing Eastern integration into the global economy. The authors argue for the further globalization of Eastern European enterprise networks as a condition for recovery and growth in the region. Empirical evidence is provided from

five industrial sectors (car industry, telecommunication, shipbuilding, computers, software), including case studies and international comparisons.

This sixth volume in the Academy of International Business Series presents leading-edge research on contemporary themes in international business. Part one explores several of the major issues that currently face multinational enterprises: government policy, the Asia crisis, knowledge and technology management, corporate-subsidiary relations, strategies for small firms and the

impact of the technological revolution. Part Two of the volume examines the impact of foreign direct investment, FDI. Written by a range of international contributors, a key focus of these papers is the particular issues relating to foreign investment in the emerging markets of Central and Eastern Europe and South-East Asia.
