Although Gender Studies have found their way into most domains of academic research and teaching, they are not directly in the spotlight of foreign language teaching pedagogy and research. However, teachers are confronted with gender issues in the language classroom everyday. By the use of language alone, they construct or deconstruct gender roles; with the choice of topics they shape gender identities in the classroom; and their ways of approaching pupils clearly mirrors their gender sensitivity. The book "Gender and Language Learning" aims at raising awareness towards gender issues in different areas of foreign language teaching and learning. The primary objective of the book is to spark university students', trainee teachers' and in-service teachers' analysis and reflection of gender relations in the foreign language learning and teaching section.

Alexithymia is a multifaceted construct that is characterized by several facets, including difficulties identifying one's feelings; difficulties describing one's feelings to others; and an externally focused, utilitarian cognitive style. In the long-term, higher alexithymia scores represent risks factors for poorer mental and physical health outcomes. There is, however, a lack of systematic understanding of the underlying processes that can explain these vulnerabilities. This book shows that the facets of alexithymia influence several aspects of how one perceives and responds to neutral and emotional situations, by impacting multiple cognitive processes (attention, appraisals, memory, language and behavior). The effects are influenced by context, with some situations leading to deficits in emotion responding, and others that contribute to emotional over-responding. The book shows the importance of drawing better connections amongst multiple processes, toward disentangling them and revealing where early processes have impacts on later processes. A lack of correspondence between processes, as well as amongst alexithymia facets is expected to lead to ineffective and inflexible emotion regulation, thereby posing elevated risks for physical and mental

illness. The chapters in this book were originally published as a special issue of Cognition and Emotion.

Intelligent Systems Modeling and Simulation II Ministerio de Educación

For citizenship education in the 21st century, globalization increasingly presents a new challenge and a new opportunity. Since the time when nationalism played a critical role in unifying new nations, nationality and citizenship have been virtually synonymous terms. As a result, the constructed symbiosis of citizenship and national identity has influenced state supported citizenship education in the most profound way. School curricula, particularly in public schools, produced and reinforced the dominant version of citizenship, which is national citizenship. Schools were expected to prepare future loyal citizens who would identify themselves with the nation. Due to the changing nature and scope of human interactions, the traditional model of citizenship education, however, appears increasingly outdated and deficient to address many contemporary challenges. Thus, schools have become a locus of a potential conflict of two citizenship discourses: the discourse of national citizenship that for a long time has served as the ultimate purpose of public education and the discourse of global citizenship that is forcefully and continuously seeking for a proper place in school curricula despite the lack of curricular heritage. The need for an education for citizenship that has a global scope and is guided by critical and emancipatory approaches becomes more evident. At the same time, the pressure to globalize and internationalize curriculum actively challenges such concepts as patriotism, national identity, loyalty to the state, or national uniqueness of government and democratic development that have been fundamental for citizenship and civic education for decades. In this book, a group of international scholars present their research about the dynamic development, interplay, and interconnectedness of two major discourses in citizenship education, namely national and global. Case studies and ethnographies from China, Cyprus, Egypt, Hong Kong and Singapore, Lebanon, Liberia, the Netherlands, Russia, and the United States display a multifaceted but yet

comprehensive picture of educators' attempts to promote social justice, global awareness, and multiple loyalties. The volume will appeal to several constituencies: it will be interesting to teachers and teacher educators whose focus of instruction is citizenship education, social studies education, and global education; it will also be interesting to scholars who conduct research in citizenship and global education.

World tuberculosis day takes place on the 24th of March, commemorating the date Robert Koch announced he had discovered TB bacillus, the bacterium causing tuberculosis. Tuberculosis is still a widespread epidemic in various parts of the world, leading to over one and a half million worldwide annual deaths, which disproportionately affects developing countries. The COVID-19 pandemic shifted countries' focus away from tuberculosis, putting the goals of the End TB project at risk. The World Tuberculosis Day 2023 focuses on boosting awareness, hoping to increase public and political involvement—which will be crucial for the UN High-level meeting on TB in September 2023. Political will is needed to increase financial investment in current TB programs, as well as to improve the research and development of strategies to improve TB prevention (such as the development of a new TB vaccine), TB diagnosis (such as improving the speed and efficiency of current molecular diagnostic tests), and TB treatment (such as finding shorter and more efficient treatments). It is in this spirit that Frontiers is launching a new article collection to coincide with this UN day. This occasion not only offers an opportunity to raise the visibility of tuberculosis but also to consider solutions to this ongoing epidemic.

Statistics Using IBM SPSS IAP

This book occupies a unique position in the field of statistical analysis in the behavioural and social sciences in that it targets learners who would benefit from learning more conceptually and less computationally about statistical procedures and the software packages that can be used to implement them. This book provides a comprehensive overview of this important research skill domain with an emphasis on visual support for learning and better understanding. The primary focus is on fundamental concepts, procedures and interpretations of statistical analyses within a single broad illustrative research context. The book covers a wide range of descriptive, correlational and inferential statistical procedures as well as more advanced procedures not typically covered in introductory and intermediate statistical texts. It is an ideal reference for postgraduate students as well as for researchers seeking to broaden their conceptual exposure to what is possible in statistical analysis.
