If the aim of graphic design is to communicate meaning clearly, there's an irony that the field itself has struggled between two contradictory opposites: rote design resulting from a rigorous, fixed set of rules, and eccentric design that expresses the hand of the artist but fails to communicate with its audience. But what if designers focused on process and critical analysis over visual outcome?

Through a carefully selected collection of more than seventy-five seminal texts spanning centuries and bridging the disciplines of art, architecture, design history, philosophy, and cultural theory, *Graphic Design Discourse: Evolving Theories, Ideologies, and Processes of Visual Communication* establishes a new paradigm for graphic design methodologies for the twenty-first century. This illuminating anthology is essential reading for practicing designers, educators, and students trying to understand how to design in a singular, expressive way without forgoing clear and concise visual communication.

*Designing and Managing the Supply Chain*, 3/e provides state-of-the-art models, concepts, and solution methods that are important for the design, control, operation, and management of supply chain systems. In particular, the authors attempt to convey the intuition behind many key supply chain concepts and to provide simple techniques that can be used to analyze various aspects of the supply chain. Topical coverage reflects the authors' desire to introduce students to those aspects of supply chain management that are critical to the success of a business. Although many essential supply chain management issues are interrelated, the authors strive to make each chapter as self-contained as possible, so that the reader can refer directly to chapters covering topics of interest. Each chapter utilizes numerous case studies and examples, and mathematical and technical sections can be skipped without loss of continuity. The 3rd edition represents a substantial revision. While the structure and philosophy were kept intact, the authors placed an increasing importance on finding or developing effective frameworks that illustrate many important supply chain issues. At the same time, motivated by new developments in industry, they added material on a variety of topics new to the book while increasing the coverage of others.

*The SAGE Handbook of Current Developments in Grounded Theory* Edward Elgar Publishing

Asia is the most populated geographical region, with 50% of the world's inhabitants living there. Coupled that with the impressive economic growth rates in many Asian countries, the region provides a very attractive and lucrative market for many businesses, big and small and from all industries. In addition, Asia is also a dynamic market that significantly grows with developments in technology and digitalization. For example, a research by Google and Temasek shows that Southeast Asia is the world's fastest growing internet region. The internet economy in Southeast Asia is expected to grow by 6.5 times from US\$31 billion in 2015 to US\$197 billion in 2025. All these make it critical for marketers, whether domestic, regional or global, to stay in touch if not ahead, in their understanding of what is happening in Asia from a marketing perspective and what Asia has to offer to the world. One phenomenon happening in the Asian market and which marketers should pay utmost attention to, is the rapidly unfolding digital revolution that has fundamentally transformed not just the extent but also the nature of competition. What makes it even more challenging and complicating is also how such a revolution impacts on consumer and business buying behavior. Disruptive technologies supported by this digital revolution have brought in new competitors and enabled existing competitors to surpass the conventional boundaries which we may be quite familiar with. Asian consumers have become more educated and connected and have embraced newer ways of selecting, buying and using products and services. In this book, the Father of Modern Marketing, Professor Philip Kotler has collaborated with two marketing experts from Asia, Hermawan Kartajaya from Indonesia and Hooi Den Huan from Singapore to publish a book on *Marketing for Competitiveness: Asia to the World — In the Age of Digital Consumers*. This book argues that marketing is no longer just vertical but has encompassed a new, more horizontal paradigm. In addition to many new concepts and frameworks, this book includes a plethora of real-world examples from various countries in Asia, which will help to shed light on how companies, both Asian and global, compete in Asia. Useful lessons can be drawn by all businesses in the world on how to win the mind, heart and spirit of the Asian consumer — digital and non-digital.

Smart city development has emerged a major issue over the past 5 years. Since the launch of IBM's Smart Planet and CISCO's Smart Cities and Communities programmes, their potential to deliver on global sustainable development targets have captured the public's attention. However, despite this growing interest in the development of smart cities, little has as yet been published that either sets out the state-of-the-art, or which offers a less than subjective, arm's length and dispassionate account of their potential contribution. This book brings together cutting edge research and the findings from technical development projects from leading authorities within the field to capture the transition to smart cities. It explores what is understood about smart cities, playing particular attention on the governance, modelling and analysis of the transition that smart cities seek to

represent. In paving the way for such a representation, the book begins to account for the social capital of smart communities and begins the task of modelling their embedded intelligence through an analysis of what the "embedded intelligence of smart cities" contributes to the sustainability of urban development. This innovative book offers an interdisciplinary perspective and shall be of interest to researchers, policy analysts and technical experts involved in and responsible for the planning, development and design of smart cities. It will also be of particular value to final year undergraduate and postgraduate students interested in Geography, Architecture and Planning.
