This book documents the harmful effects of factory farming in both industrialized and developing countries and explains the range of problems it can cause. From transmission of disease and loss of livestock diversity to hazardous and unsanitary processing methods, it shows clearly why factory farming is an unsafe, inhumane, and ecologically disruptive

form of meat production. Also shows how the individual can make a difference by supporting local, organic, or pasture-raised animal products.

Life and Death: Twilight Reimagined
Weldon Owen

"I felt like I was walking to the end of a plank precariously hanging over shark-infested water. When I jumped, sharp teeth would rip into me and the cold water would steal my breath away. The monsters would take everything from me, leaving me shivering and naked in the water. The only difference was that tonight I would be pulled from the icy darkness and forced to

do it again. There would be no release from death, only pain." Home after her first year of college, Adeline Miller is looking forward to a stress free summer filled with reading, working on her blog, and spending time with friends. But all that changes in an instant when she is witness to something terrible, something she wasn't supposed to see. Beaten, drugged, kidnapped. Adeline Miller is ripped from her innocent and carefree life and thrust into darkness, into a world full of pain and horror. As a sex slave, she is forced to do horrible things, and have horrible things done to her. One of her

captors has a past as dark as the world she is now living in. Will getting close to him mean freedom? Or will he pull her deeper into the shadows?

The Cannibal Cookbook Algebraic and Combinatorial Computational Biology Dynamic Biological Organization is a fascinating account of the living organisms as dynamic systems, based on the concept that the spatio-temporal coherence of events within a living system result from the intrinsic dynamics of the processes taking place within that system. The authors of this important work, Miguel Aon and Sonia Cortassa have travelled widely to work in some of the leading research laboratories to accumulate a large information base on which to assemble this book. Taking a transdisciplinary approach, the authors draw on work at the interface of biochemistry, genetics, physiology, thermodynamics, kinetics and biomathematics, using mathematical models throughout to corroborate and analyze the biological complexity presented. Emphasizing biological processes occurring at the cellular level. Dynamic Biological Organization gives exciting insights into the experimental and theoretical applications of modern scientific paradigms to fundamental biological processes.

Lust brings out the liar in everyone. Every erection has Pinocchio written up and down its length—yes, everybody wants to be REAL, a real boy, an honest woman, unafraid and upright—but then desire, the ultimate honesty, does us in. Desire doesn't give a whit about shame. Our secrets, our exaggerations and distractions, it's all just a lot of twisting in the wind as far as sex is concerned—what we want WILL come out. "Is our sexuality a basic, good, and precious thing that somehow became terribly misunderstood? Or is there something really evil out there in Sex Land that attaches itself to our libidos and is only held back by vigilance and caution?" asks Susie Bright in her bestselling book *The Sexual State of the Union*. Bright pushes the borders of propriety until they blur and become irrelevant in the face of our inherent need to touch and be touched. With candor and passion, Susie Bright proves that sexual knowledge can indeed be salvation and inspiration.

"An extraordinary record of a great artist in his studio, it also describes what it feels

like to be transformed into a work of art." —ARTnews Lucian Freud (1922-2011), widely regarded as the greatest figurative painter of our time, spent seven months painting a portrait of the art critic Martin Gayford. The daily narrative of their encounters takes the reader into that most private place, the artist's studio, and to the heart of the working methods of this modern master—both technical and subtly psychological. From this emerges an understanding of what a portrait is, but something else is also created: a portrait, in words, of Freud himself. This is not a biography, but a series of close-ups: the artist at work and in conversation at restaurants, in taxis, and in his studio. It takes one into the company of the painter for whom Picasso, Giacometti, and Francis Bacon were friends and contemporaries, as were writers such as George Orwell and W. H. Auden. The book is illustrated with many of Lucian Freud's other works, telling photographs taken by David Dawson of Freud in his studio, and images by such great artists of the past as van Gogh and Titian who are discussed by Freud and Gayford. Full of wry observations, the book reveals the inside

story of how it feels to pose for a remarkable artist and become a work of art.

Speech, Crime, and the Uses of Language Little, Brown Books for Young Readers Every Economics textbook today teaches that questions of values and morality lie outside of, are in fact excluded from, the field of Economics and its proper domain of study, "the economy." Yet the dominant cultural and media narrative in response to major economic crisis is almost always

one of moral outrage. How do we reconcile this tension or explain this paradox by which Economics seems to have both everything and nothing to do with values? The discipline of modern economics hypostatizes and continually reifies a domain it calls "the economy"; only this epistemic practice makes it possible to falsely separate the question of value from the broader inquiry into the economic. And only if we have first eliminated value from the domain of economics can we then transform stories of financial crisis or massive corporate corruption into simple tales of ethics. But if economic forces establish, transform, and maintain relations of value then it proves impossible to separate economics from questions of value, because value relations only come to be in the world by way of economic logics. This means that the "positive economics" spoken of so fondly in the textbooks is nothing more than a contradiction in terms, and as this book demonstrates, there's no such thing as "the economy." To grasp the basic logic of capital is to bring into view the unbreakable link between economics and value.

Computational Biology introduces students and researchers to a panorama of powerful and current methods for mathematical problem-solving in modern computational biology. Presented in a modular format, each topic introduces the biological foundations of the field, covers specialized mathematical theory, and concludes by highlighting connections with ongoing research, particularly open questions. The work addresses problems from gene regulation, neuroscience, phylogenetics, molecular networks, assembly and folding of biomolecular structures, and the use of clustering methods in biology. A number of these

chapters are surveys of new topics that have not been previously compiled into one unified source. These topics were selected because they highlight the use of technique from algebra and combinatorics that are becoming mainstream in the life sciences. Integrates a comprehensive selection of tools from computational biology into educational or research programs Emphasizes practical problem-solving through multiple exercises, projects and spinoff computational simulations Contains scalable material for use in undergraduate and graduate-level classes and research projects Introduces the reader to freely-available professional software Supported by illustrative datasets and adaptable computer code

In his debut book of photography, with a foreword by one of the luminaries of NYC culture and entertainment, Adrian Buckmaster's monograph presents a staggeringly beautiful collection of portraits - a cross-section of humanity in all of its glorious diversity, from the ordinary to the extraordinary and everything in-between. Having spent his early years shooting commercial beauty and fashion, Buckmaster soon shifted focus to more personal projects, challenging conventional notions of beauty and celebrating the eccentricities of those whom society might classify as "misfits." Echoes of Buckmaster's early career remain, in the form of exquisite costuming, make-up, and scenic design. Despite an element of performance, there is an undeniable rawness to these portraits, in which subjects are both aware of the camera's gaze and sympathetically self-conscious, robing and disrobing, revealing and concealing. Buckmaster's photographic genius is encapsulated in his uncanny ability to fastidiously art direct

while simultaneously stripping away layers of formality and convention. Arranged in three movements: Imposing, Revealing, and Inventing, this collection progresses from traditional portraiture to increasingly intimate portrayals, as subjects expose, create, and invent themselves. Included in this endlessly varied spectrum of characters are Burlesque performers, families, brides, lovers, and all manner of tattoos and body piercings. There are classical reclining nudes, reminiscent of Edouard Manet's Olympia or Titian's Sleeping Venus, dancers with incredible physical strength and dexterity, women costumed as peacocks and geishas, a contortionist inside a trunk, even a green-skinned man, bejewelled like an Indian deity. All of this and much more, An Embarrassment of Riches is a joyful celebration of individuality that will leave the reader mesmerised."

An Embarrassment of Riches

Completely novel

A humorous account of what really happens behind the scenes of both Michelin-starred restaurants and lesser establishments - and the extraordinary, larger-than-life characters who inhabit them. The book begins with Lennie Nash's decision to give up his job as a journalist, aged 40, and a fateful meeting with Rick Stein, when the cheffing door is opened. There follow stints in the kitchens at

Padstow, a failed audition for Masterchef, work as a commis chef under a crazed ex-football hooligan, 16-hour shifts as a kitchen slave in a gastropub, and the rigours of the Fat Duck. Unable to keep up with the younger chefs around him, he gives up the dream and returns to office life, only to find the itch starting again... The book is aimed at the umpteen armchair chefs and foodies who would love to learn the trade first-hand from the professionals, braving the stress, 16-hour days, and low pay of kitchen life, but are far too sensible to do so.
