PROXIMATE ANALYSIS OF FEEDSTUFF Purpose of Proximate

Analysis: Estimation and determination of how much of the major food components, which are Moisture, CHO, Lipids, Proteins, Ash, Crude Fiber, exist in a given food. The proximate analyses therefore are: 1. Moisture Analyses 2. Crude Fat Analyses 3. Nutrition Labelling and Proximate Analysis

This system of analysis divides the food into six fractions: moisture, ash, crude protein, ether extract, crude fibre and nitrogen-free extractives. The moisture content is determined as the loss in weight that results from drying a known weight of food to constant weight at 100 degrees C.
