About: To prepare you for real world practice, this book will highlight content areas most relevant to the bedside and why they must be mastered and understood. To help visualize the professional development that is needed as you transition to the responsibilities of the professional nurse, I use the metaphor of building a house; not a static structure, but a unique, vibrant

"living" house that is a reflection of how you choose to build and add to it over time. Nursing is a living and vibrant practice that requires your personal involvement and engagement to promote the well-being of those you care for. The components of this "living" home include: Foundation: A house must have a firm and stable foundation. The ethical comportment or the art of nursing is this foundation for every nurse. Caring behaviors, nurse engagement, and professionalism in practice must be present or your nursing practice could be on shaky ground before it even begins! Walls: The applied sciences of nursing: pharmacology, fluid and electrolytes, and anatomy and physiology. I contextualize these sciences to the bedside so the relevance of mastering this content becomes apparent. Roof: Critical thinking and clinical reasoning, which is the thinking that is required by the nurse that completes the house and ties everything together. Skeletons in the closet: Every house has closets and some have a few skeletons in them! Incivility and men in nursing will be explored in detail!

Featuring brilliant art, engaging new case studies, and dynamic new teaching and learning resources, this 9th edition of Porth's Pathophysiology: Concepts of Altered Health States is captivating, accessible, and student-friendly while retaining the comprehensive, nursing-focused coverage that has made it a market leader. The book's unique emphasis on "concepts" of altered health states, as opposed to factual descriptions of diseases and disorders, helps students grasp both the physical and psychological aspects of altered health. Drawing on the

expertise of new co-author Sheila Grossman, the Ninth Edition maintains its comprehensive depth, while paring down content where appropriate and replacing descriptive content with striking art. (Approximately 600 illustrations are new or have been re-rendered in a consistent modern style.) Also new to this edition are advanced 3D narrated animations that address the most clinically relevant and difficult to understand disorders, engaging unit-opening case studies that reinforce critical thinking and set the tone for the content to come, and a wide range of built-in study tools. Now, for the first time, Porth's Pathophysiology is supported by PrepU, an adaptive learning system that help students learn more, while giving instructors the data they need to monitor each student's progress, strengths, and weaknesses.

The emphasis on principles instead of practice is welcome....The text is clear, concise, and surprisingly approachable for what could have been a very dense and dry discussion. I could not put this book down and read it entirely in one sitting. When was the last time anyone found a hematology textbook so riveting?"--Doody's Review Service
