Practical seismic data analysis (Book, 2014) [WorldCat.org]* Reflection seismology (or seismic reflection) is a method of exploration geophysics that uses the principles of seismology to estimate the properties of the Earth's subsurface from reflected seismic waves. The method requires a controlled seismic source of energy, such as dynamite or Tovex blast, a specialized air gun or a seismic vibrator, commonly known by the trademark name Vibroseis. *Reflection seismology - Wikipedia* These examples are from the Cambridge English Corpus and from sources on the web.
