This Guide provides clear, up-to-date guidance on the concepts, definitions, and classifications of the gross external debt of the public and private sectors, and on the sources, compilation techniques, and analytical uses of these data. The Guide supersedes the previous international guidance on external debt statistics available in *External Debt: Definition, Statistical Coverage, and Methodology* (known as the Gray Book), 1988. The Guides conceptual framework derives from

the System of National Accounts 1993 and the fifth edition of the IMF's Balance of Payments Manual (1993). Preparation of the Guide was undertaken by an Inter-Agency Task Force on Finance Statistics, chaired by the IMF and involving representatives from the BIS, the Commonwealth Secretariat, the European Central Bank, Eurostat, the OECD, the Paris Club Secretariat, UNCTAD, and the World Bank.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalfindex.

This book highlights a range of perspectives concerning the economic and social impact of microfinance products (especially microcredit) on their clients' lives, scientifically analysing four distinct impact levels: namely, the individual level, the household level, the enterprise level, and the community level. Microcredit services enable low income people to move their family away from poverty and towards higher living standards, by increasing their business activity, improving their employment opportunities, and contributing to sustainable economic growth and development. Investigating the Albanian market, by assessing the impact of Albanian microfinance programs at each of the four above-mentioned impact levels, this book explores whether being a client of MFIs microfinance programmes brings positive changes to their lives and their community. The book uses various data collection techniques, such as surveys, interviews, quantitative measurements of financial data, and data processing methodologies including paired t-tests and a comparison-based data analysis methodology using a control group in order to support or reject the above hypothesis.
