Not all objects that will be part of a system are identified early on in the development process, for a number of reasons, including the chosen software process (such as incremental processes).Design patterns in object-oriented programmingThe Singleton pattern is used to design the classes which provides the configuration settings for an application. By implementing configuration classes as Singleton not only that we provide a global access

point, but we also keep the instance we use as a cache object. Singleton Pattern | Object Oriented Design Design patterns are solutions to software design problems you find again and again in real-world application development. Patterns are about reusable designs and interactions of objects. The 23 Gang of Four (GoF) patterns are generally considered the foundation for all other patterns.
