Davis's Drug Guide for Nurses Specialty of Addiction Medicine, Faculty of Medicine and Health, The University of Sydney

This is the third edition of this publication which contains the latest information on vaccines and vaccination procedures for all the vaccine preventable infectious diseases that may occur in the UK

or in travellers going outside of the UK, particularly those immunisations that comprise the routine immunisation programme for all children from birth to adolescence. It is divided into two sections: the first section covers principles, practices and procedures, including issues of consent, contraindications, storage, distribution and disposal of vaccines, surveillance and monitoring, and the Vaccine Damage Payment Scheme; the second section covers the range of different diseases and vaccines.

Guidelines for Preparing Core Clinical-safety Information on Drugs Oxford University Press, USA
Black's Veterinary Dictionary has been a bestseller for over 80 years. It is an essential reference tool for all with a professional or leisure interest in the care of animals. Much more than a list of veterinary terms, its practical approach ensures that readers gain an insight into the signs and symptoms of common, and less common, diseases, their diagnosis and treatment. For the 22nd edition much new and updated information has been included, reflecting the numerous developments that have taken place in animal care and husbandry, and welfare. There is greatly expanded coverage of topics relating to popular breeds of dog and cat, and the inheritable conditions that might affect their health. Advances in medicine, surgery and diagnostic techniques;

descriptions of newly identified diseases such as Schmallenberg virus; the resurgence of old scourges such as TB in cattle, and ongoing enzootic infections such as bird flu are included in this new edition. The growing risk of exotic diseases such as heartworm being imported following the relaxation of travel arrangements for dogs and cats is reflected in new entries. Notes on many new species being farmed or kept as companion animals are among the thousands of topics covered. Whether your interest is in cats or cattle, horses or hamsters, puppies or pigeons, the A-Z of veterinary matters is covered in Black's Veterinary Dictionary.

New edition of the number one nursing drug guide in the educational market.

Social and Administrative Aspects of Pharmacy in Low- and Middle-Income Countries Academic Press

This is an inclusive reference exploring the scientific basis and practice of drug therapy. The key concept is to look at the balance between the benefits and risks of drugs but in this context also the social impact which drugs have in modern societies is highlighted. Taking an evidence-based approach to the problem, the practice of clinical pharmacology and pharmacotherapy in the

developing as well as the developed world is examined. For this purpose the book * Covers general clinical pharmacology, pharmacology of various drug groups and the treatments specific to various diseases * Gives guidance on how doctors should act so that drugs can be used effectively and safely * Encourages the rational use of drugs in society This book brings together a large amount of excellent content that will be invaluable for anyone working within, or associated with, the field of clinical pharmacology and pharmacotherapy - undergraduates, postgraduates, regulatory authorities and the pharmaceutical industry.

Pharmacoepidemiology John Wiley & Sons

The Australian Guidelines for the Treatment of Alcohol Problems have been periodically developed over the past 25 years. In 1993, the first version of these guidelines, titled: 'An outline for the management of alcohol problems: Quality assurance in the treatment of drug dependence project' was published (Mattick & Jarvis 1993). The Australian Government commissioned an update a decade later (Shand et al. 2003) and a further edition in 2009 to integrate the Guidelines with the Australian Guidelines to Reduce Health Risks from Drinking Alcohol (National Health and Medical Research Council, NHMRC 2009; Haber et al., 2009). The present version of the Guidelines was also commissioned by the Commonwealth of Australia to remain current and integrated with the updated NHMRC consumption guidelines (2020). In order to ensure that guidelines remain relevant, the next set of guidelines should be updated in 2025, consistent with NHMRC recommendation that guidelines be updated every five years. These guidelines aim to provide up-to-date, evidence-based information to clinicians on available treatments for people with alcohol problems and are largely directed towards individual clinicians in practice, such as primary care physicians (general practitioners, nursing staff), specialist medical practitioners, psychologists and other counsellors, and other health professionals. Some chapters highlight service or system level issues that impact on clinicians and their patients. These include recommendations concerning Aboriginal and Torres Strait Islander peoples, culturally and linguistically diverse groups, stigma, and discrimination. Elsewhere, organisation capacity is implied, such as medical resources for withdrawal management where recommendations indicate use of medications. As all forms of treatment will not be readily available or suitable for all populations or settings, these guidelines may require interpretation and adaptation.

Cardiovascular, respiratory, and related conditions cause more than 40 percent of all deaths globally, and their substantial burden is rising, particularly in low- and middle-income countries (LMICs). Their burden extends well beyond health effects to include significant economic and societal consequences. Most of these conditions are related, share risk factors, and have common control measures at the clinical, population, and policy levels. Lives can be extended and improved when these diseases are prevented, detected, and managed. This volume summarizes current knowledge and presents evidence-based interventions that are effective, cost-effective, and scalable in LMICs.
