**A PRACTICAL APPROACH TO BUSINESS IMPACT ANALYSIS** Oxford University Press

This volume contains papers presented in a workshop of international experts in September 2008 in Berlin. The experts discussed how environmental consequences of EU legislation can be incorporated in a more

effective way. In other words, this contribution focuses on the question of which measures can strengthen the conservation of environmental effects in the EU impact assessment procedure and in the subsequent legislative decision-making process. This allows drawing conclusions for the impact assessment process in Germany. This volume begins with an introductory paper (Bizer/Lechner/Führ) which served as the basis for discussion in our workshop. The questions raised in this paper are addressed by the authors of the subsequent chapters. Stephen White (DG Environment, EU-Commission) discusses the impact assessment

from an internal perspective within the Commission. Pendo Maro (European Environmental Bureau) reviews the impact assessment practice from the perspective of an environmental NGO. Martin Schmidt et al. discuss the potential for more formalism to strengthen environmental issues within impact assessments and favour a checklist.

contingency planning, with a style that makes it accessible to all business managers. Some of the original underlying principles remain the same – but much has changed. It is presented in an easy-to-follow format, explaining in detail the core BC activities incorporated in BS 25999, Business Continuity Guidelines, BS 25777 IT Disaster Recovery and other

standards and in the body of knowledge common to the key business continuity institutes. Contributors from America, Asia Pacific, Europe, China, India and the Middle East provide a truly global perspective, bringing their own insights and approaches to the subject, sharing best practice from the four corners of the world. Elgar Publishing  
HR managers are under intense pressure to become strategic business partners. Many, unfortunately, lack the technical skills in financial analysis to succeed in this role. Now, respected HR management educator Dr. Steven Director

addresses this skill gap head-on. Writing from HR's viewpoint, Director covers everything mid-level and senior-level HR professionals need to know to formulate, model, and evaluate their HR initiatives from a financial and business perspective. Drawing on his unsurpassed expertise working with HR executives, he walks through each crucial financial issue associated with strategic talent management, including the quantifiable links between workforces and business value, the cost-benefit analysis of HR and strategic financial initiatives, and specific issues related to total rewards programs. Unlike finance books for non-

financial managers, *Financial Analysis for HR Managers* focuses entirely on core HR issues, including: How do you model HR's financial role in corporate strategic initiatives such as the introduction of a new product line? How do you select bonus drivers to send the right signals to managers? How do you design compensation packages that are fully consistent with your goals? How do you identify and manage pension-finance costs and risks that can dramatically impact the long-term financial health of the business? Government is committed to conducting formal impact assessments of the need for and likely impact of new regulations. This National Audit Office report finds that scrutiny of proposed legislation is strengthening and that the standard is better than it was, but one fifth of assessments still do not include any quantified data to assess costs or benefits. The Better Regulation Executive (BRE) has introduced new guidance, templates and training to improve the quality of impact assessments

and, as a result, impact assessments have clearer presentation of results, better planning for implementation, and more quantification of costs and benefits. But wide variation remains between the best and worst impact assessments. Where they are done well, the impact assessments include a clear statement of the policy problem, make good use of consultation and have clear recommendations. On the other hand, only 20 per cent of impact assessments presented the results of an evaluation of a range of regulatory options. Many impact assessments did not pay enough attention to compliance and enforcement issues. For example, only one

third of assessments assessed the cost of enforcement for the preferred option. There have been improvements in the analysis of costs and benefits. In 2008, 67 per cent of impact assessments quantified costs and 60 per cent quantified benefits. Under the previous arrangements, the figures were 56 per cent for quantified costs and 40 per cent for quantified benefits. There is, however, still wide variation in the level of evidence provided and insufficient analysis in the weaker impact assessments.

A profound and insightful look at how company leaders prepare for and respond to shocks and crises that threaten their business. Successful firms strategically manage and are more accurate in their assessment of large-scale risks. Doing so is increasingly challenging given the pace of change, whether financial, technological, regulatory, or environmental. *Mastering Catastrophic Risk* provides real-world practical insights into how large companies are responding to this new

reality and develops a framework for smarter thinking about events that can damage a business. As leading authorities on risk management, strategy, and company leadership, Howard Kunreuther and Michael Useem take us on a groundbreaking tour of firms' decision making process. They demonstrate how improving readiness for and resilience against future shocks is now an integral part of company strategy. Using the "DISRUPT" model they have developed, they highlight the seven primary Drivers of disruption: Interdependencies increase exposure; Short-term focus results in limited vision; Regulations require change and

constrain opportunities; Urbanization increases the costs of disasters; Probabilities of disasters have increased; and Transparency has enhanced public awareness of problems and impacts on firms' reputations. Some disruptions can be anticipated, while others arrive without warning. Their onset stresses decision makers, impairs company operations, and may even put the enterprise at risk. The bottom-line: business leaders and their governing boards face ever more challenging disruptions and must be ever more on guard. If your company is hit tomorrow, will it bounce back, or drown?
