The Sicilian Mafia, or Cosa
Nostra, is one of the most
intriguing criminal
phenomena in the world.
It is an unparalleled
organised criminal
grouping that over almost
two centuries has been
able not only to
successfully permeate licit
and illicit economy,
politics and civil society,
but also to influence and
exercise authoritative
power over both the
underworld and the
upper-world. This criminal
phenomenon has been a
captivating conundrum for
scholars of different
disciplines who have tried
to explain with various
paradigms the reasons
behind the emergence
and consolidation of the
mafia. Challenging the
Mafia Mystique provides
an analysis of the
changes the Sicilian mafia
has undergone, from
legitimation to
denunciation. Rino
Coluccello highlights how,
from the very emergence

of the organised criminal
groups in Sicily, a culture
existed that was
protective and tolerant of
the mafia. He argues that
the various
conceptualisations of the
mafia that dominated the
public and scientific
debate in the nineteenth
and more than half of the
twentieth century created
a mystique, which
legitimised the mafia and
contributed to their
success. This book will be
of great interest to
scholars and students of
organised crime, Italian
politics and Italian
literature.

During the 17th and 18th
century musicians'
mobilities and migrations
are essential for the
European music history
and the cultural exchange
of music. Adopting
viewpoints that reflect
different methodological

approaches and
diversified research
cultures, the book
presents studies on
central scopes, strategies
and artistic outcomes of
mobile and migratory
musicians as well as on
the transfer of music. By
looking at elite and non-
elite musicians and their
everyday mobilities to
major and minor centers
of music production and
practice, new biographical
patterns and new stylistic
paradigms in the
European East, West and
South emerge.

The original idea for a
conference on the
"shapes of knowledge"
dates back over ten years
to conversations with the
late Charles Schmitt of
the Warburg Institute.
What happened to the
classifications of the
sciences between the
time of the medieval
Studium and that of the
French Encyclopedie is a
complex and highly
abstract question; but
posing it is an effective
way of mapping and
evaluating long term
intellectual changes,
especially those arising
from the impact of
humanist scholarship, the
new science of the

seventeenth century, and attempts to evaluate, to apply, to reconcile, and to institutionalize these rival and interacting traditions. Yet such patterns and transformations cannot be well understood from the heights of the general history of ideas. Within the general framework of the organization of knowledge the map must be filled in by particular explorations and soundings, and our project called for a conference that would combine some encyclopedic (as well as interdisciplinary and international) breadth with scholarly and technical depth.

The Shapes of Knowledge from the Renaissance to the Enlightenment Getty Publications

This book provides both the research and practitioner communities with a comprehensive coverage of the metaheuristic methodologies that have proven to be successful in a wide variety of real-world problem settings. Moreover, it is these metaheuristic strategies that hold particular promise for success in the future. The various chapters serve as stand alone presentations giving both the necessary

background underpinnings as well as practical guides for implementation.

Empire on the Adriatic ASM Press

This book constitutes the refereed proceedings of the 4th International Symposium on Ubiquitous Networking, UNet 2018, held in Hammamet, Morocco, in May 2018.

The 35 full papers presented together with 5 short papers in this volume were carefully reviewed and selected from 87 submissions. The focus of UNet is on technical challenges and solutions related to such a widespread adoption of networking technologies, including broadband multimedia, machine-to-machine applications, Internet of things, security and privacy, data engineering, sensor networks and RFID technologies.

The Lives of the Fathers, Martyrs, and Principal Saints EDITIONS DE L'ATTRIBUT

To this day, no comprehensive academic study of the development of guidebooks to Rome over time has been performed. This book treats the history of guidebooks to Rome from the Middle Ages up to the early twentieth century. It

is based on the results of the interdisciplinary research project Topos and Topography, led by Anna Blennow and Stefano Fogelberg Rota. From the case studies performed within the project, it becomes evident that the guidebook as a phenomenon was formed in Rome during the later Middle Ages and early Renaissance. The elements and rhetorical strategies of guidebooks over time have shown to be surprisingly uniform, with three important points of development: a turn towards a more user-friendly structure from the seventeenth century and onward; the so-called 'Baedeker effect' in the mid-nineteenth century; and the introduction of a personalized guiding voice in the first half of the twentieth century. Thus, the 'guidebook tradition' is an unusually consistent literary oeuvre, which also forms a warranty for the authority of every new guidebook. In this respect, the guidebook tradition is intimately associated with the city of Rome, with which it shares a constantly renovating yet eternally fixed nature. Gazetteer of Planetary Nomenclature 1994

Magdalena Dabrowski retraces the course of geometric abstract art in our century, she divides the years from 1910 to 1980- into five spans. The first: Origins of the Nonobjective - Cubism, Futurism, Cubo-Futurism. The second: Surface to space - Suprematism, de Stijl, Russian Constructivism. Then, Internation constructivism, followed by Paris-New Yourk connection and finally, Nonfigurative tendrnclies. *Challenging the Mafia Mystique* OUP Oxford Wave phenomena are ubiquitous in nature. Their mathematical modeling, simulation and analysis lead to fascinating and challenging problems in both analysis and numerical mathematics. These challenges and their impact on significant applications have inspired major results and methods about wave-type equations in both fields of mathematics. The Conference on Mathematics of Wave Phenomena 2018 held in Karlsruhe, Germany, was devoted to these topics and attracted internationally renowned experts from a broad range of fields. These conference proceedings

present new ideas, results, and techniques from this exciting research area. History of Architectural Conservation Other Press, LLC Life history theory seeks to explain the evolution of the major features of life cycles by analyzing the ecological factors that shape age-specific schedules of growth, reproduction, and survival and by investigating the trade-offs that constrain the evolution of these traits. Although life history theory has made enormous progress in explaining the diversity of life history strategies among species, it traditionally ignores the underlying proximate mechanisms. This novel book argues that many fundamental problems in life history evolution, including the nature of trade-offs, can only be fully resolved if we begin to integrate information on developmental, physiological, and genetic mechanisms into the classical life history framework. Each chapter is written by an established or up-and-coming leader in their respective field; they not only represent the state of the art but also offer fresh perspectives for

future research. The text is divided into 7 sections that cover basic concepts (Part 1), the mechanisms that affect different parts of the life cycle (growth, development, and maturation; reproduction; and aging and somatic maintenance) (Parts 2-4), life history plasticity (Part 5), life history integration and trade-offs (Part 6), and concludes with a synthesis chapter written by a prominent leader in the field and an editorial postscript (Part 7). Recent Research on Geomorphology, Sedimentology, Marine Geosciences and Geochemistry Princeton University Press Starting with the invasion of Yugoslavia in 1941, and focusing on the Italian occupation, this book offers a view of the little-known events that were the torment of Yugoslavia in Italy's attempt to create an empire on the banks of the Adriatic. Very rele **Mathematics of Wave Phenomena** Enigma Books Interested in the Genetic Algorithm? Simulated Annealing? Ant Colony Optimization? Essentials of Metaheuristics covers these and other metaheuristics algorithms, and is intended for

undergraduate students, programmers, and non-experts. The book covers a wide range of algorithms, representations, selection and modification operators, and related topics, and includes 71 figures and 135 algorithms great and small. Algorithms include: Gradient Ascent techniques, Hill-Climbing variants, Simulated Annealing, Tabu Search variants, Iterated Local Search, Evolution Strategies, the Genetic Algorithm, the Steady-State Genetic Algorithm, Differential Evolution, Particle Swarm Optimization, Genetic Programming variants, One- and Two-Population Competitive Coevolution, N-Population Cooperative Coevolution, Implicit Fitness Sharing, Deterministic Crowding, NSGA-II, SPEA2, GRASP, Ant Colony Optimization variants, Guided Local Search, LEM, PBIL, UMDA, cGA, BOA, SAMUEL, ZCS, XCS, and XCSF.

At first glance, participation appears to be a constant goal throughout the history of cultural policies, adapting itself to very diverse configurations in time and space. However, some see it as a lever for social and cultural innovation that marks a breakthrough in several areas of public policy. Authors: Félix Dupin-Meynard, Emmanuel Négrier, Lluís Bonet, Giada Calvano, Luisella Carnelli, Elettra Zuliani. This book explores family interaction and family psychoanalysis from varying standpoints used around the world. It illustrates these with extensive clinical cases discussed from varying perspectives. The book is the first in a series of volumes from the International

Psychoanalytical Association's Working Group on Family and Couple Psychoanalysis, drawn from its ongoing research into comparative theories and methods of working analytically with families and couples, and with varying types of family structure. It also applies lessons from family psychoanalysis to analytic theory and to the practice of individual psychoanalysis.

Contrasts of Form

Elsevier

This edited book is based on the papers accepted for presentation during the 2nd Springer Conference of the Arabian Journal of Geosciences (CAJG-2), Tunisia, in 2019. Major subjects treated in the book include geomorphology, sedimentology, and geochemistry. The book presents an updated unique view in conjugating field studies and modeling to better quantify the process-product binomial unusual in geosciences. In the geomorphology section, 24 papers deal with topics related to fault slip and incision rates, soil science, landslides and debris flows, coastal processes, and geoarcheology, and geoheritage. Under the sedimentology section, 34

papers including stratigraphy, and environmental, tectonic, and diagenetic processes, together with evolutionary, biostratigraphic, and paleo-environmental significance of paleontology are presented. Additionally, this section also contains papers on marine geosciences, from molecular proxies related to climate to geophysical surveys. Last but not least, the third section on geochemistry is composed of 26 papers that are focused on sedimentary geochemistry and mineralogical characterization, magmatic and metamorphic processes and products, and the origin and exploration of mineral deposits. This book resumes the current situation related to the abovementioned topics mainly in the Mediterranean realm. The volume book is of interest to all researchers, practitioners, and students in the fields of geomorphology, sedimentology, and geochemistry, as well as those engaged in environmental geosciences, soil science, stratigraphy and

paleontology, geoarcheology and geoheritage, marine geosciences, petrology, metallogenesis, and mineral deposits.

The Path of Humility
Princeton University Press

Implementing safety practices in healthcare saves lives and improves the quality of care: it is therefore vital to apply good clinical practices, such as the WHO surgical checklist, to adopt the most appropriate measures for the prevention of assistance-related risks, and to identify the potential ones using tools such as reporting & learning systems. The culture of safety in the care environment and of human factors influencing it should be developed from the beginning of medical studies and in the first years of professional practice, in order to have the maximum impact on clinicians' and nurses' behavior. Medical errors tend to vary with the level of proficiency and experience, and this must be taken into account in adverse events prevention. Human factors assume a decisive importance in resilient organizations, and an understanding of risk control and containment

is fundamental for all medical and surgical specialties. This open access book offers recommendations and examples of how to improve patient safety by changing practices, introducing organizational and technological innovations, and creating effective, patient-centered, timely, efficient, and equitable care systems, in order to spread the quality and patient safety culture among the new generation of healthcare professionals, and is intended for residents and young professionals in different clinical specialties.

Dosso Dossi has long been considered one of Renaissance Italy's most intriguing artists. Although a wealth of documents chronicles his life, he remains, in many ways, an enigma, and his art continues to be as elusive as it is compelling. In *Dosso's Fate*, leading scholars from a wide range of disciplines examine the social, intellectual, and historical contexts of his art, focusing on the development of new genres of painting, questions of style and

chronology, the influence of courtly culture, and the work of his collaborators, as well as his visual and literary sources and his painting technique. The result is an important and original contribution not only to literature on Dosso Dossi but also to the

study of cultural history in early modern Italy.

Musicians' Mobilities and Music Migrations in Early Modern Europe

Museum

Ada Palmer explores how Renaissance poets and philologists, not scientists, rescued Lucretius and his

atomism theory. This heterodoxy circulated in the premodern world, not on the conspicuous stage of heresy trials and public debates but in the classrooms, libraries, studies, and bookshops where quiet scholars met transformative ideas.
