How Animals Use Their Senses
 The omnipresent electric fields produced by some animals function like senses. Electric eels and some species of rays have modified muscle cells that produce electric charges strong enough to shock and sometimes kill their prey. Other fish (including many sharks) use weaker electric fields to help them navigate murky waters, home in on prey or monitor their

surroundings. 4 Senses Animals Have That Humans Don't
 Some animals have developed amazing adaptations to their environments. Many different types of energy exist in the environment, some of which humans cannot detect. Here are some examples of how some animals sense the outside world and the anatomical structures that allow them to do so. Ants: Can detect small movement through 5 cm of earth.
