WP3 intends to address the question: How can cross-food value chain and market services function better to increase employment and boost income of smallholders and SMEs? The WP focuses on two types of cross-value chain services, logistics and financial services. (1) logistics services – supply chain management, transportation, traceability, digital platforms for e-commerce, and (cold) storage. (2) value-chain financial services – mainly focusing on digital financial services (DFS) that facilitate transactions, savings, access to and use of credit, and insurance. The logistics services in agri-food systems in low- and middle-income countries (LMICs) are often targeted at large-scale enterprises with greater market power and less accessible to smallholder farmers and small and micro enterprises (SMEs). WP3 aims to assess the ways in which these emerging logistics services (including digital platforms) can be cost-effectively targeted at smallholder farmers and agri-food SMEs. Regarding DFS, the WP will investigate cost-effective ways of improving access to and adoption of DFS among smallholders and agri-food SMEs, especially among women and youth. Though these emerging DFS appear to have a high potential to benefit smallholders and SMEs across the agri-food value chains in LMICs, they need a reliable internet connection, a suitable mobile phone network, and a broad network of mobile money agents to be effective. WP3 thus aims to identify innovations/emerging logistics and DFS and test their effectiveness to smallholders and SMEs using randomized control trials (RCTs) in pilots, with the goal of country-specific scalable designs.

The Albuquerque Convention Center was the venue for the 1993 Cryogenic Engineering Conference. The meeting was held jointly with the International Cryogenic Materials Conference. Walter F. Stewart, of Los Alamos National Laboratory, was conference chairman. Albuquerque is near Los Alamos National Laboratory which has been a significant contributor to the cryogenics community since the early days of the Manhattan Project. Albuquerque is also the home of the Air Force's

Phillips Laboratory which has a lead role in developing cryocoolers. The program consisted of 322 CEC papers, more than a 30% increase from CEC-91 and 20% more than CEC-89. This was the largest number of papers ever submitted to the CEC. Of these, 249 papers are published here, in Volume 39 of Advances in Cryogenic Engineering. Once again the volume is published in two books. This volume includes a cumulative index for the CEC volumes from 1975-1993 (volumes 21,23,25,27,29,31,33,35,37, and 39 of Advances in Cryogenic Engineering). The first 20 volumes are indexed in Volume 20. A companion cumulative index for the ICMC volumes (volumes 22 through 40) appears in Volume 40. This is my first volume as editor. I would not have been able to have done it without the assistance of the many reviewers. Especially appreciated was the instruction manual left me by the previous editor, Ron Fast.
