These proceedings represent the work of researchers participating in the 17th European Conference on Research

Methodology for Business and Management Studies (ECRM) which is being hosted this year by Università Roma TRE, Rome, Italy on 12-13 July 2018.
Machine Learning Techniques for Improved Business Analytics
Springer

This timely new collection presents the most significant English language contributions to the literature on Islamic accounting. Including more than thirty articles by some of the most important authors in the area, the book covers six

<p>major themes: the conceptual framework, accounting ethics and social responsibility, corporate reporting, accounting practice and zakat, auditing and the Islamic history of accounting. <u>Research and Current Issues in Management Accounting</u> Taylor & Francis This book addresses the issues and functioning of accounting and accountability for social and</p>	<p>non-profit organizations. It presents research papers that address the limitations of conventional accounting, the meaning of accountability, and the potential of social and environmental accounting for these organizations. <u>Challenges and Controversies in Management Research</u> Springer <u>Surveillance Technologies and Early Warning Systems: Data Mining</u></p>	<p>Applications for Risk Detection has never been more important, as the research this book presents an alternative to conventional surveillance and risk assessment. This book is a multidisciplinary excursion comprised of data mining, early warning systems, information technologies and risk management and explores the intersection of these components in problematic domains. It</p>

offers the ability to apply the most modern techniques to age old problems allowing for increased effectiveness in the response to future, eminent, and present risk. Human-Centered System Design for Electronic Governance OUP Oxford Accounting has an ever-increasing significance in contemporary society. Indeed, some argue that its practices are fundamental

to the development and functioning of modern capitalist societies. We can see accounting everywhere: in organizations where budgeting, investing, costing, and performance appraisal rely on accounting practices; in financial and other audits; in corporate scandals and financial reporting and regulation; in corporate governance, risk management, and

accountability, and in the corresponding growth and influence of the accounting profession. Accounting, too, is an important part of the curriculum and research of business and management schools, the fastest growing sector in higher education. This growth is largely a phenomenon of the last 50 years or so. Prior to that, accounting was seen mainly as a mundane,

technical, bookkeeping exercise (and some still share that naive view). The growth in accounting has demanded a corresponding engagement by scholars to examine and highlight the important behavioural, organizational, institutional, and social dimensions of accounting. Pioneering work by accounting researchers and social scientists more generally has persuasively demonstrated

to a wider social science, professional, management, and policy audience how many aspects of life are indeed constituted, to an important extent, through the calculative practices of accounting. Anthony Hopwood, to whom this book is dedicated, has been a leading figure in this endeavour, which has effectively defined accounting as a distinctive field of research in the social

sciences. The book brings together the work of leading international accounting academics and social scientists, and demonstrates the scope, vitality, and insights of contemporary scholarship in and on accounting and auditing. International Financial Reporting Standards Implementation Academic Conferences and publishing limited Advances in Accounting Behavioral Research

addresses a wide range of issues that affect the users, preparers and assurers of accounting information. Volume 19 exemplifies this focus by including research from auditing, taxation and managerial and information systems. Accounting Journals: Scopus, Web of Science, SCImago Emerald Group Publishing Among banking industries and insurance and

security sectors, systemic risk and information uncertainty can generate negative consequences . By developing solutions to address such issues, financial regulation initiatives can be optimized. Value Relevance of Accounting Information in Capital Markets is an essential reference source for the latest scholarly research on the importance of

information asymmetries and uncertainties and their effects on the overall regulation of financial industries. Featuring extensive coverage on a wide range of perspectives, such as financial reporting standards, investor confidence, and capital flows, this publication is ideally designed for professionals, accountants, and academics seeking current

research on the effects of the underlying elements in investing. The Routledge Companion to Qualitative Accounting Research Methods Academic Conferences and publishing limited In today's society, environmental concerns are at the forefront of entrepreneurial decision-making and planning. With increased attention on an organization's environmental impact, researchers

and business leaders strive to provide the best methodologies and strategies for effective environmental reporting and accountability. Green Accounting Initiatives and Strategies for Sustainable Development presents the latest scholarly research on the economic, social, and environmental objectives essential to the planning and support of future organizations and communities. This

publication is an essential reference source for academicians, researchers, advanced level students, and professionals interested in designing business models and financial plans with consideration for environmental and social liabilities. This publication features timely, research based chapters on economic, social, and environmental policies including, but

not limited to, green performance measurement, triple bottom line reporting, sustainable societies, environmental protection, and risk and adaptive management. Surveillance Technologies and Early Warning Systems: Data Mining Applications for Risk Detection IGI Global Advances in Management Accounting (AIMA) is a publication of quality applied research in management accounting.

The journal's purpose is to publish thought-provoking articles that advance knowledge in the management accounting discipline and are of interest to both academics and practitioners. **Perspectives of Management Accounting for Sustainable Business Practices** Academic Conferences and publishing limited There are many studies confirming the

relationship between financial systems and economic development, but there are few which examine the degree to which financial systems a) impact the quality of information, b) influence sound corporate governance, c) ensure effective mechanisms of risk management, d) mobilize savings and f) facilitate trade. In the context of sustainability, there should

also be a line of inquiry into how a particular financial system influences the assurance and implementation of sustainable development principles and goals. This book delivers a methodological approach to designing and assessing sustainable financial systems. It provides an original contribution by prioritizing ESG factors in the decision-making process of financial

institutions and identifying their impact on sustainable financial systems. The author argues that to achieve financial stability, it is necessary to have in place mechanisms designed to prevent financial problems from becoming systemic and/or threatening the stability of the financial and economic system, while maintaining (or not undermining) the economy's ability to

sustain growth and perform its other functions. The book primarily takes a simulation and experimental approach. It is the first book to take such a comprehensive look at sustainable financial systems as opposed to sustainable finance in general. It will appeal to academics, students and researchers in the fields of economics, finance and banking, business, management and political and social

sciences. Advances in Accounting Behavioral Research Routledge The 14th Australasian Centre on Social and Environmental Accounting Research Conference (A-CSEAR 2015) is being held on 10-11 December 2015 at Macquarie University, Sydney, Australia. The Conference Chair is Dr John Dumay and the Programme Chair is Dr James Hazelton, both from Macquarie University. ACSEAR provides an opportunity for individuals researching and working in the field of social and environmental accounting in both public and private sectors, to come together to exchange ideas and discuss current research in the field. The theme for the conference this year is 'Partnerships', reflecting the belief amongst our community that achieving progress requires partnerships of all types - between academics of different disciplines, between industry and academia, between government and stakeholders, and of course between members and professional bodies. The keynote speakers for the conference are Charles de Villiers from Auckland University of Technology, New Zealand on the topic Theorising the interactions

among legitimacy accountability and pro-activity in the social sphere; Helen Tregidga from Auckland University of Technology, New Zealand talking about Corporate chameleons greenwashing and counter narratives”; Markus J. Milne from the School of Business and Law at the University of Canterbury, New Zealand on the topic of Crass empiricism and the social construction of corporate

environmental performance and Lee D. Parker from the School of Accounting, RMIT University, Melbourne, Australia who will address to issue of Accounting for CSR: Revisiting the agenda. ACSEAR received 60 abstract submissions. After the double-blind peer review process 21 academic research papers, have been accepted for publication in these conference proceedings.

These papers represent research from around the world, including Australia, Brazil, China, Fiji, Iran, Italy, Japan, New Zealand, South Africa, UK and the USA. Corporate Narrative Reporting ABC-CLIO Management Control and Uncertainty recognizes that all control takes place under conditions of uncertainty: it does now, and it always has done. In this edited collection, the

contributing authors examine different aspects of management control systems in the modern world whilst paying more explicit attention to the ubiquitous nature of uncertainty

Handbook of Research on Retailing Techniques for Optimal Consumer Engagement and Experiences

Routledge

This book presents a comprehensive and expert-led insight into the role, types,

practises and determinants of corporate narrative reporting (CNR). It provides a detailed overview of the importance of narrative disclosure in understanding the full annual report and, consequently, company performance and future prospects.

CNR comprises integral information presented in the front half of the annual report, which helps to tell the full story of a business,

providing a comprehensive overview and understanding of both its past and future performance. Supported with illustrative tables and figures throughout, this volume contains a plethora of carefully selected chapters, featuring the analytical insight of knowledgeable academics and researchers from all over the world. Using different data collection

and analysis methods, it links and advances theory and practice in the disclosure and presentation of non-financial information in annual reports and other disclosure channels. The book is logically structured into four parts: Narrative Reporting: The State of the Art Empirical Research on Narrative Reporting Narrative Sustainability Reporting Narrative Reporting in Times of Crisis

Providing a global insight into CNR in practice, Corporate Narrative Reporting is an invaluable resource for both students and practitioners interested or involved in preparing, reviewing/auditing, analysing and understanding annual reports. It should also be of particular interest to policymakers, regulators and investors. [ECRM 2018 17th European Conference on Research Methods in](#)

Global Crises**

Emerald Group Publishing Analytical tools and algorithms are essential in business data and information systems. Efficient economic and financial forecasting in machine learning techniques increases gains while reducing risks. Providing research on predictive models with high accuracy, stability, and ease of interpretation is important in

improving data preparation, analysis, and implementation processes in business organizations. Machine Learning Techniques for Improved Business Analytics is a collection of innovative research on the methods and applications of artificial intelligence in strategic business decisions and management. Featuring coverage on a broad range of topics such as data mining, portfolio

optimization, and social network analysis, this book is ideally designed for business managers and practitioners, upper-level business students, and researchers seeking current research on large-scale information control and evaluation technologies that exceed the functionality of conventional data processing techniques. **Corporate Carbon and Climate**

From its

position as one of the premier management accounting research journals, the series is well poised to meet the needs of management accounting scholars. Management Control and Uncertainty Springer Advances in Management Accounting Emerald Group Publishing Islamic Accounting Taylor & Francis This succinct, comprehensive sourcebook provides everything

needed to start, maintain, and provide service for a business collection, and to research virtually any business topic. Accountability and Social Accounting for Social and Non-profit Organizations Emerald Group Publishing With increased competition for external funding, technological advancement, and public expectations for transparency, not-for-profit

and non-governmental organizations are facing new challenges and pressures. While research has explored the roles of accounting, accountability, and performance management in nonprofit organizations, we still lack evidence on the best practices these organizations implement in the areas of accountability and performance management. This book collects and presents that

evidence for the first time, offering insights to help nonprofits face these new challenges head-on. Performance Management in Nonprofit Organizations focuses on both conventional and contemporary issues facing nonprofits, presenting evidence-based insights from leading scholars in the field. Chapters

examine the design, implementation, and working of accounting, accountability, governance, and performance management measures, providing both retrospective and contemporary views, as well as critical commentaries on accounting and performance related issues in nonprofit organizations. The book's contributors also offer critical

commentaries on the changing role of accounting and performance management in this sector. This research-based collection is an interesting and useful read for academics, practitioners, students, and consultants in nonprofit organizations, and is highly accessible to accounting and non-accounting audiences alike.
