Computer architecture is the organization of the components making up a computer system and the semantics or meaning of the operations that guide its function. As such, the computer architecture governs the design of a family of computers and defines the logical interface that is targeted by programming languages and their compilers.

Computer organization • Describes the function and the way

computer components are operated and the way they are

connected together to form the computer system. Computer

architecture - the structure and behavior of computer as seen by

the user. - instruction formats, the instruction set and techniques

for addressing memory.
