International Relations
and the Problem of
Difference has developed
out of the sense that IR as

a discipline does not
assess the quality of
cultural interactions that
shape, and are shaped by,
the changing structures
and processes of the
international system. In
this work, the authors re-
imagine IR as a uniquely
placed site for the study
of differences as
organized explicitly
around the exploration of
the relation of wholes and
parts and sameness and
difference-and always the
one in relation to the
other.

According to most social scientists, the advent of a global media village and the rise of liberal democratic government would diminish ethnic and national identity as a source of political action. Yet the contemporary world is in the midst of an explosion of identity politics and often violent ethnonationalism. This volume examines cases ranging from the well-publicized ethnonationalism of Bosnia and post-Apartheid South Africa to ethnic conflicts in Belgium and Sri Lanka. Distinguished international scholars including John Comaroff, Stanley J. Tambiah, and

Ernesto Laclau argue that continued acceptance of imposed ethnic terms as the most appropriate vehicle for collective self-identification and social action legitimizes the conditions of inequality that give rise to them in the first place. This ambitious attempt to explain the inadequacies of current approaches to power and ethnicity forges more realistic alternatives to the volatile realities of social difference.

The long separation of health and International Relations, as distinct academic fields and policy arenas, has now dramatically changed.

Health, concerned with the body, mind and spirit, has traditionally focused on disease and infirmity, whilst International Relations has been dominated by concerns of war, peace and security. Since the 1990s, however, the two fields have increasingly overlapped.

How can we explain this shift and what are the implications for the future development of both fields? Colin McInnes and Kelley Lee examine four key intersections between health and International Relations today - foreign policy and health diplomacy, health and the global political economy, global health governance and global health security. The explosion of interest in these subjects has, in large part, been due to

"real world" concerns - disease outbreaks, antibiotic resistance, counterfeit drugs and other risks to human health amid the spread of globalisation. Yet the authors contend that it is also important to understand how global health has been socially constructed, shaped in theory and practice by particular interests and normative frameworks. This groundbreaking book encourages readers to step back from problem-solving to ask how global health is being problematized in the first place, why certain agendas and issue areas are prioritised, and what determines the potential solutions put forth to address them? The palpable struggle to better understand the health risks facing a globalized world, and to strengthen collective action to deal with them effectively, begins - they argue - with a more reflexive and critical approach to this rapidly emerging subject.

Managing Cultural

Differences PublicAffairs

Unlike any other text on international trade, this groundbreaking book focuses on the dynamic long-run relationship between trade and

economic growth rather than the static short-run relationship between trade and economic efficiency. The authors begin with well-known theory on international trade, and then take the student into more recent and less well-known work, all with a careful balance between empirical and theoretical perspectives. A valuable teaching tool for courses in international economics, economic growth, and economic development at both the undergraduate and graduate levels, the book uses some very modest algebra, calculus, and statistics. However, most analytical discussions are built around diagrams in order to make the text accessible to students with a variety of social science backgrounds. An Instructor's Manual is available to professors who adopt the text.

The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across

the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different

applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.
