...It uses hydrologic principles in the solution of engineering problems arising from human exploitation of water resources of the earth. The engineering hydrologist, or water resources engineer, is involved in the planning, analysis,

design, construction and operation of projects for the control, utilization and management of water resources. Engineering Hydrology Class Lectures and Notes ... Overview
 Hydrology is concerned with assessment of the natural distribution of water in time and space, and with evaluating the impact of manmade changes on the distribution and quality of this water. Applied hydrology has traditionally been concerned with floods and water resources. Hydrology | Study | Imperial College London
 Water resources engineering is the quantitative study of the hydrologic cycle -- the distribution and circulation of water linking the earth's atmosphere, land and oceans. Surface runoff is measured as the difference between precipitation and

abstractions, such as infiltration (which replenishes groundwater flow), surface storage and evaporation. Applications include the management of the urban water supply, the design of urban storm-sewer systems, and flood forecasting. Hydraulic and Water Resources Engineering | Civil ...
