This book focuses on the contribution of Information Technology (IT) and Information Technology Enabled Services (ITES) in shaping the current and future global economic scenario, with a special focus on Asia, and taking into account the three broad macroeconomic dimensions — growth, sustainability and governance mechanisms. The last two decades have

witnessed a structural shift in the world economy due to the tremendous growth in gross domestic product share for the service sector; in fact, service has emerged as the dominant sector and the main driver of GDP growth. This is mainly attributable to the spectacular success of the IT sector in the new knowledge economy. Tradability, technology and transportability – the three T’s – govern productivity growth in today’s services. Growing Asian economies such as India, China and Vietnam, using their demographic advantages, have been reaping the

benefits of this boom. The book's content focuses on recent debates and discussions concerning the issue of long-term sustainability and governance, especially in India, as these companies are facing continuous challenges in terms of international competition, salary inflation, health hazards, scarcity of talent, employee attrition, security concerns, global slowdown and many other technology-related issues. The book further highlights how the increased application of IT-based products and services is resulting in harsh inequalities concerning income distribution in many developing countries of Asia, mainly because of its labor shedding nature, and hence might be detrimental to sustainable development, if suitable policy measures

are not implemented to counter these effects. The book provides a wealth of information for researchers, graduate students and political scientists alike, as well as thought-provoking insights for social scientists, policymakers and government officials. It also offers a valuable source of data for business and management professionals, and for members of Chambers of Commerce and Industry.

The aim of this set of books is to combine the best of current academic research into the use of Communities of Practice in education with "hands on" practitioner experience in order to provide teachers and academics with a convenient source of guidance and an

incentive to work with and develop in their own Communities of Practice. This set of books is divided into two volumes: volume 1 deals principally with the issues found in colocated Communities of Practice, while volume 2 deal principally with distributed Communities of Practice"

Feminism and the Contradictions of Oppression is a penetrating and comprehensive study of the development of feminism over the last thirty years. The first part of this major new textbook examines feminist theory and feminist political strategy. The second section examines how contradictions of class, race, subculture and sexuality divide women. The final

part explores ways out of the impasse. This level-headed and challenging book is one of the most notable contributions to feminism in recent years.

Is Reading the Bible the Fastest Way to Lose Your Faith? For centuries, the Bible was called "the Good Book," a moral and religious text that guides us into a relationship with God and shows us the

right way to live. Today, however, some people argue the Bible is outdated and harmful, with many Christians unaware of some of the odd and disturbing things the Bible says. Whether you are a Christian, a doubter, or someone exploring the Bible for the first time, bestselling author Dan Kimball guides you step-by-step in how to make sense of these difficult and disturbing Bible passages. Filled with stories, visual illustrations, and memes reflecting popular cultural objections, *How (Not) to Read the Bible* is a lifeline for individuals who are confused or discouraged with questions about the Bible. It also works great as a small-group study or sermon series.

The Tulsa Race Riot of 1921 was the worst civil disturbance since the Civil War. On May 21, 1921, a group of white Oklahomans attacked the prosperous African American community, called the Greenwood District or "the Black Wall Street" in Tulsa, OK over the alleged assault of a white woman by a black man. 24 hours later more than 800 people were admitted to local hospitals, 10,000 residents were homeless, and 35 city blocks were reduced to rubble. The monetary cost of the riot was later estimated to be 26 million dollars. This report examines the events leading up to the riot, the riot itself, and the consideration of reparations for the victims.

 In the last few years, knowledge management practices have evolved in organizations. The introduction of Web 2.0 technologies has encouraged new methods of information usage and knowledge sharing, which are frequently used by employees who already rely on these Web 2.0 technologies in their personal lives. Knowledge Management 2.0: Organizational Models and Enterprise Strategies provides an overview of theoretical and empirical research on knowledge management generation in the Web 2.0 age. Research in this book highlights knowledge management evolution with a global focus and investigates the impact knowledge management 2.0 has on

business models, enterprise governance and strategies, human resources, and IT design, implementation, and appropriation in organizations.

Going Virtual: Distributed Communities of Practice contributes to the understanding of how more subtle kinds of knowledge can be managed in a distributed international environment. It describes academic work in the field of Knowledge Management, with a specific focus on the management of knowledge which cannot be managed by the normal capture-codify-store approach and hopes to answer the question, "what is the nature of the more 'subtle' kind of knowledge and how can it be managed in the distributed environment?"

Case Studies in Abnormal Psychology presents a broad range of cases drawn from the clinical experience of authors Kenneth N. Levy, Kristen M. Kelly, and William J. Ray to take readers beyond theory into real-life situations. The authors take a holistic approach by including multiple perspectives and considerations, apart from those of just the patient. Each chapter follows a consistent format: Presenting Problems and Client Description; Diagnosis and Case Formulation; Course of Treatment; Outcome and Prognosis/Treatment Follow-up; and Discussion Questions. Providing empirically supported treatments and long-term follow-up in many case studies gives students a deeper understanding of each

psychopathology and the effects of treatment over time.

This edited three volume edition brings together significant papers previously published in the Journal of Information Technology (JIT) over its 30 year publication history. The three volumes of Enacting Research Methods in Information Systems celebrate the methodological pluralism used to advance our understanding of information technology's role in the world today. In addition to quantitative methods from the positivist tradition, JIT also values methodological articles from critical research perspectives, interpretive traditions, historical perspectives, grounded theory, and action research and design science

approaches. Volume 1 covers Critical Research, Grounded Theory, and Historical Approaches. Volume 2 deals with Interpretive Approaches and also explores Action Research. Volume 3 focuses on Design Science Approaches and discusses Alternative Approaches including Semiotics Research, Complexity Theory and Gender in IS Research. The Journal of Information Technology (JIT) was started in 1986 by Professors Frank Land and Igor Aleksander with the aim of bringing technology and management together and bridging the 'great divide' between the two disciplines. The Journal was created with the vision of making the impact of complex interactions and developments in technology more accessible to a wider audience.

Retaining this initial focus, the JIT has gone on to extend into new and innovative areas of research such as the launch of JITTC in 2010. A high impact journal, JIT shall continue to publish leading trends based on significant research in the field.
