mining consulting firm Llumino. *Motor Freight Transportation and Warehousing Survey* Scholastic Inc. The plucky little hero of the #1 New York Times bestseller *The Little Snowplow* returns in a story about wishing, waiting, and the magic of a first snowfall. The little snowplow loves his job on the Mighty Mountain Road Crew, but the work he loves best is plowing snow.

Throughout the year, he wishes for snow to come, but winter begins without a single flake in sight. As the weeks pass and the little snowplow's birthday approaches, he starts to wonder whether it will snow at all. Will the little snowplow's birthday dreams come true? *Collaborative Dimensional Modeling, from Whiteboard to Star Schema* John Wiley & Sons Data is

fundamental to the modern world. From economic development, to healthcare, to education and public policy, we rely on numbers to allocate resources and make crucial decisions. But because so much data fails to take into account gender, because it treats men as the default and women as atypical, bias and discrimination are baked into our systems. And women pay tremendous costs for this

bias, in time, money, and often with their lives. Celebrated feminist advocate Caroline Criado Perez investigates shocking root cause of gender inequality and research in *Invisible Women*, diving into women's lives at home, the workplace, the public square, the doctor's office, and more. Built on hundreds of studies in the US, the UK, and around the world, and written with energy, wit,

and sparkling intelligence, this is a groundbreaking, unforgettable exposé that will change the way you look at the world.

Summary
Event Streams in Action is a foundational book introducing the ULP paradigm and presenting techniques to use it effectively in data-rich environments. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the Technology
Many high-profile applications, like LinkedIn and Netflix, deliver nimble, responsive performance by reacting to user and system events as they occur. In large-scale systems, this requires efficiently monitoring, managing, and reacting to multiple event streams. Tools like Kafka, along with innovative patterns like unified log processing, help create a coherent data processing architecture for event-based applications. About the Book
Event Streams in Action teaches you techniques for aggregating, storing, and processing event streams using the unified log processing pattern. In this hands-on guide, you'll discover important application designs like the lambda architecture, stream aggregation, and event reprocessing. You'll also explore scaling, resiliency, advanced

"Extraordinary . Tokarczuk's novel is funny, vivid, dangerous, and disturbing, and it raises some fierce questions about human behavior. My sincere admiration for her brilliant work." —Annie Proulx In a

remote Polish village, Janina devotes the dark winter days to studying astrology, translating the poetry of William Blake, and taking care of the summer homes of wealthy Warsaw residents. Her reputation as a crank and a recluse is amplified by her not-so-secret preference for the company of animals over humans. Then a neighbor, Big Foot, turns up dead. Soon other bodies

are discovered, in increasingly strange circumstances . As suspicions mount, Janina inserts herself into the investigation, certain that she knows whodunit. If only anyone would pay her mind . . . A deeply satisfying thriller cum fairy tale, Drive Your Plow over the Bones of the Dead is a provocative exploration of the murky borderland between sanity and madness, justice and

tradition, autonomy and fate. Whom do we deem sane? it asks. Who is worthy of a voice? Snow Day Simon and Schuster Integrating Hadoop leverages the discipline of data integration and applies it to the Hadoop open-source software framework for storing data on clusters of commodity hardware. It is packed with the need-to-know for managers, architects, designers, and developers

responsible for populating Hadoop in the enterprise, allowing you to harness big data and do it in such a way that the solution:

- Complies with (and even extends) enterprise standards
- Integrates seamlessly with the existing information infrastructure
- Fills a critical role within enterprise architecture.

Integrating Hadoop covers the gamut of the setup, architecture and

possibilities for Hadoop in the organization, including:

- Supporting an enterprise information strategy
- Organizing for a successful Hadoop rollout
- Loading and extracting of data in Hadoop
- Managing Hadoop data once it's in the cluster
- Utilizing Spark, streaming data, and master data in Hadoop processes - examples are provided to reinforce concepts.

This publication highlights the fast-moving technological advancement and infiltration of Artificial Intelligence into society. Concepts of evolution of society through interconnectivity are explored, together with how the fusion of human and technological interaction leading to Augmented Humanity is fast becoming more than just an endemic phase, but a

cultural phase shift to digital societies. It aims to balance both the positive progressive outlooks such developments bring with potential issues that may stem from innovation of this kind, such as the invasive procedures of bio hacking or ethical connotations concerning the usage of digital twins. This publication will also give the reader a good level of understanding on

fundamental cyber defence principles, interactions with Critical National Infrastructure (CNI) and the Command, Control, Communications and Intelligence (C3I) decision-making framework. A detailed view of the cyber-attack landscape will be garnered; touching on the tactics, techniques and procedures used, red and blue teaming initiatives, cyber resilience and the protection

of larger scale systems. The integration of AI, smart societies, the human-centric approach and Augmented Humanity is discernible in the exponential growth, collection and use of [big] data; concepts woven throughout the diversity of topics covered in this publication; which also discusses the privacy and transparency of data ownership, and the potential dangers of exploitation

through social media. As humans are become ever more interconnected, with the prolificacy of smart wearable devices and wearable body area networks, the availability of and abundance of user data and metadata derived from individuals has grown exponentially. The notion of data ownership, privacy and situational awareness are now at the forefront in this new age.
